

CONTENTS

1	Nonideal plasma. Basic concepts	1
1.1	Interparticle interactions. Criteria of nonideality	1
1.1.1	Interparticle interactions	1
1.1.2	Coulomb interaction. Nonideality parameter	1
1.1.3	Electron–atom and ion–atom interactions	5
1.1.4	Compound particles in plasma	7
1.2	The range of existence of nonideal plasma. The classification of states	8
1.2.1	Two–component plasma	8
1.2.2	Metal plasma	10
1.2.3	Plasma of hydrogen and inert gases	13
1.2.4	Plasma with multiply charged ions	14
1.2.5	Dusty plasmas	16
1.2.6	Nonneutral plasmas	16
1.3	Nonideal plasma in nature. Scientific and technical applications	17
References		22
2	Electrical methods of nonideal plasma generation	26
2.1	Plasma heating in furnaces	26
2.1.1	Measurement of electrical conductivity and thermoelectromotive force	27
2.1.2	Optical absorption measurements.	36
2.1.3	Density measurements.	40
2.1.4	Sound velocity measurements	42
2.2	Isobaric Joule heating	43
2.2.1	Isobaric heating in a capillary	43
2.2.2	Exploding wire method	47
2.3	High–pressure electric discharges	53
References		59
3	Dynamic methods in the physics of nonideal plasma	65
3.1	The principles of dynamic generation and diagnostics of plasma	66
3.2	Dynamic compression of the cesium plasma	73
3.3	Compression of inert gases by powerful shock waves	76
3.4	Isentropic expansion of shock–compressed metals	89
3.5	Generation of superdense plasma in shock waves	104
3.6	Nonideal plasma generation by powerful fluxes of energy	110

4 Ionization equilibrium and thermodynamic properties of weakly ionized plasmas	125
4.1 Partly ionized plasma	125
4.1.1 Classical low-temperature plasma	125
4.1.2 Three-component electron-ion-atomic plasma	125
4.1.3 Second virial coefficient and partition function of atom	127
4.2 Anomalous properties of a metal plasma	128
4.2.1 Physical properties of metal plasma	129
4.2.2 Lowering of the ionization potential	131
4.2.3 Charged clusters	132
4.2.4 Thermodynamics of multiparticle clusters	134
4.2.5 "Vapor-liquid" phase transition and metallization	136
4.3 Lowering of ionization potential and cluster ions in weakly nonideal plasmas	139
4.3.1 Interaction between charged particles and neutrals	139
4.3.2 Molecular and cluster ions	142
4.3.3 Ionization equilibrium in alkali metal plasma	146
4.4 Droplet model of nonideal plasma of metal vapors.	148
Anomalously high electrical conductivity	148
4.4.1 Droplet model of nonideal plasma	148
4.4.2 Ionization equilibrium	151
4.4.3 Calculation of the plasma composition	154
4.5 Metallization of plasma	156
4.5.1 Mott's transition	156
4.5.2 Quasi-atomic model	158
4.5.3 Phase transition in metals	159
References	164
5 Thermodynamics of plasmas with developed ionization	169
5.1 One-component plasma with the neutralizing charge background	169
5.1.1 Monte Carlo method	169
5.1.2 Results of calculation	171
5.1.3 Ion-sphere and hard-sphere models for OCP	174
5.1.4 Wigner crystallization	175
5.1.5 Integral equations	177
5.1.6 Polarization of compensating background	178
5.1.7 Charge density waves	179
5.1.8 Sum rules	179
5.1.9 Asymptotic expressions	180
5.1.10 OCP ion mixture	184
5.2 Multicomponent plasma. Results of the perturbation theory	185
5.3 Pseudopotential models. Monte Carlo calculations	190
5.3.1 Choice of pseudopotential	192

5.4	Bound state contribution. Confined atom model	197
5.5	Quasiclassical approximation	203
5.6	Density functional method	207
5.7	Quantum Monte Carlo method	210
5.8	Comparison with experiments	217
5.9	On phase transitions in nonideal plasmas	229
	References	237
6	Electrical conductivity of partially ionized plasma	248
6.1	Electrical conductivity of ideal partially ionized plasma	248
6.1.1	Electrical conductivity of weakly ionized plasma	248
6.1.2	Electrical conductivity of strongly ionized plasma	251
6.2	Electrical conductivity of weakly nonideal plasma	255
6.3	Electrical conductivity of nonideal weakly ionized plasma	262
6.3.1	The density of electron states	262
6.3.2	Electron mobility and electrical conductivity	266
6.4	The thermoelectric coefficient	268
