

CONTENTS

CHAPTER 1 SUPERCONDUCTING MAGNET TECHNOLOGY	1
1.1 Introductory Remarks	1
1.2 Superconductivity	3
1.2.1 Meissner Effect	3
1.2.2 London's Theory of Superconductivity	5
1.2.3 Type I and Type II Superconductors	5
<i>DC and AC Responses</i>	6
<i>Magnetic Behavior</i>	7
<i>Examples of Superconductors</i>	7
1.2.4 Critical Surfaces of Type II Superconductor	9
<i>Critical Current Density, J_c</i>	9
1.3 Magnet-Grade Superconductors	9
1.3.1 Materials vs. Magnet-Grade Superconductors	10
1.3.2 Laboratory Superconductor to Magnet-Grade Superconductor	10
1.4 Magnet Design	11
1.4.1 Requirements and Key Issues	11
1.4.2 Effect of Operating Temperature	12
1.5 Numerical Solutions	13
1.5.1 <i>Ballpark</i> Solutions	13
1.5.2 Code Solutions	13
1.6 The Format of the Book	14
PROBLEM 1.1: Thermodynamics of Type I superconductors	15
Solution to PROBLEM 1.1	16
<i>Values of H_{c_0}: Equation 1.6 and Experimental</i>	17
PROBLEM 1.2: A superconducting loop	20
Solution to PROBLEM 1.2	21
PROBLEM 1.3: Magnetic resonance imaging (MRI)	22
Solution to PROBLEM 1.3	22
REFERENCES	23
Other Sources of Information	24
CHAPTER 2 ELECTROMAGNETIC FIELDS	25
2.1 Introduction	25
2.2 Maxwell's Equations	25
2.2.1 Gauss' Law	26
2.2.2 Ampere's Law	26
2.2.3 Faraday's Law	26

2.2.4 Magnetic Induction Continuity	27
2.2.5 Charge Conservation	27
2.2.6 Magnetization and Constituent Relations	27
2.3 Quasi-Static Case	28
2.4 Poynting Vector	29
<i>Sinusoidal Case</i>	29
2.5 Field Solutions from the Scalar Potentials	30
2.5.1 Two-Dimensional Cylindrical Coordinates	30
<i>Special Cases</i>	31
2.5.2 Spherical Coordinates	31
<i>Special Cases</i>	32
2.5.3 Differential Operators in Orthogonal Coordinates	32
<i>Cartesian</i>	32
<i>Cylindrical</i>	32
<i>Spherical</i>	33
<i>Adrien Marie Legendre (1752–1833)</i> —Passage from Dirk J. Struik’s <i>A Concise History of Mathematics</i>	33
2.5.4 Legendre Functions	34
PROBLEM 2.1: Magnetized sphere in a uniform field	37
Solution to PROBLEM 2.1	38
PROBLEM 2.2: Type I superconducting rod in a uniform field	41
Solution to PROBLEM 2.2	42
<i>DISCUSSION 2.1: Perfect-Conductor Sphere in a Uniform Field</i>	44
PROBLEM 2.3: Magnetic shielding with a spherical shell	45
Solution to PROBLEM 2.3	46
<i>DISCUSSION 2.2: Shielding with a Cylindrical Shell</i>	51
PROBLEM 2.4: The field far from a cluster of four dipoles	52
Solution to PROBLEM 2.4	53
PROBLEM 2.5: Iron electromagnet pole shape	54
Solution to PROBLEM 2.5	55
<i>DISCUSSION 2.3: Permanent Magnets</i>	55
PROBLEM 2.6: Quasi-static field in a cylinder	56
Solution to PROBLEM 2.6	57
PROBLEM 2.7: Induction heating of a cylindrical shell	58
Induction heating—Part 1 (Field)	59
Solution to PROBLEM 2.7—Part 1	60
Induction heating—Part 2 (Power Dissipation)	62
Solution to PROBLEM 2.7—Part 2	63

PROBLEM 2.8: Eddy-current loss in a metallic strip	65
Solution to PROBLEM 2.8	66
<i>DISCUSSION 2.4: Lamination to Reduce Eddy-Current Loss</i>	66
PROBLEM 2.9: Rogowski coil	67
Solution to PROBLEM 2.9	68
CHAPTER 3 MAGNETS, FIELDS, AND FORCES	71
3.1 Introduction	71
3.2 Law of Biot-Savart	71
3.3 Lorentz Force and Magnetic Pressure	72
3.4 Field Analysis of Solenoidal Coil	74
<i>Nested-Coil Magnet</i>	77
3.4.1 Simple Coils	78
“Short” Coil	78
“Thin-Walled” Coil	79
“Thin-Walled & Long” Coil	79
“Ring” Coil	80
<i>Stronger Magnets (Part 1 of 2 Parts)</i>	
—Passage from Francis Bitter’s <i>Magnets: The Education of a Physicist</i>	80
3.4.2 Harmonic Errors—In a Nested Two-Coil Magnet	81
<i>Coils Misaligned Axially</i>	81
<i>Axial Shim Coils</i>	82
<i>Coils Misaligned Radially</i>	82
<i>Coils Misaligned Axially & Radially</i>	82
3.5 Axial Forces	83
3.5.1 Axial Force between Two “Ring” Coils	83
<i>Stronger Magnets (Part 2 of 2 Parts)</i>	
—Passage from Francis Bitter’s <i>Magnets: The Education of a Physicist</i>	84
<i>Special Case 1: Two Ring Coils Far Apart</i>	85
<i>Special Case 2: Two Adjacent Ring Coils of the Same Diameter</i>	85
3.5.2 Axial Force Within a “Thin-Walled” Solenoid	86
<i>Special Case 3: End Force</i>	86
<i>Special Case 4: Midplane Force</i>	86
<i>Special Case 5: Midplane Force for a “Long” Thin-Walled Solenoid</i>	86
3.5.3 Axial Force Between a “Thin-Walled” Solenoid and Ring Coil	87
<i>Special Case 6: Thin-Walled Solenoid and Ring Coil Far Apart</i>	87
<i>Special Case 7: Thin-Walled Solenoid and Ring Coil Farther Apart</i>	87
3.5.4 Axial Force between Two Thin-Walled Solenoids	88
<i>Axial Force on Solenoid A by Solenoid B</i>	88

Special Case 8: Total Midplane Force on Solenoid A	89
Derivation of Eq. 3.50 from Eq. 3.44	90
3.5.5 “Thick-Walled” Solenoid—Midplane Axial Force	91
Special Case 9: Midplane Force for a “Long” Thin-Walled Solenoid .	93
Kapitza’s Magnets (Part 1 of 3 Parts)	
—Passage from Francis Bitter’s <i>Magnets: The Education of a Physicist</i> . .	93
3.5.6 Axial Forces in a Nested Two-Coil Magnet	94
Midplane Axial Force on Solenoid A	94
Special Case 10: Midplane Force on Solenoid A—“Long” Solenoids .	95
Special Case 11: Midplane Axial Force on Solenoid A—	
Both Solenoids “Long” & Solenoid B Much Longer than Solenoid A	95
Midplane Axial Force on Solenoid B	95
Special Case 12: Midplane Axial Force on Solenoid B—	
Both Solenoids “Long” & Solenoid B Much Longer than Solenoid A	96
Special Case 13: Midplane Axial Force on Solenoid B—	
Both Solenoids “Long” & Solenoid B Much Shorter than Solenoid A	96
Kapitza’s Magnets (Part 2 of 3 Parts)	
—Passage from Francis Bitter’s <i>Magnets: The Education of a Physicist</i> . .	96
3.5.7 Axial Restoring Force on Axially Off-Centered Solenoids	97
Special Case 14: No Axial Misalignment	97
Special Case 15: “Small” Axial Misalignment	97
Special Case 16: Either Solenoid “Long”	97
3.6 Stresses and Strains in Solenoid under Magnetic Force	98
3.6.1 Stress and Strain Equations	98
3.6.2 Stress and Strain Equations in Isotropic Solenoid	100
“Thin-Walled” Coil	102
“Medium-Walled” Coil	103
“Thick-Walled” Coil	104
3.6.3 Winding Tension to Reduce Radial Stresses	105
3.7 Self Inductance	106
3.7.1 Self-Inductance of a Circular Loop	106
Kapitza’s Magnets (Part 3 of 3 Parts)	
—Passage from Francis Bitter’s <i>Magnets: The Education of a Physicist</i> . .	106
3.7.2 Self Inductance of Solenoidal Coil	107
3.7.3 Useful Inductance Formulas	108
Wire	108
“Long” Coils	108
“Short” Coil	108
“Pancake” (Flat) Coil	109

“Ideal” Dipole Magnet	109
“Ideal” Quadrupole Magnet	109
“Ideal” Circular Cross Section Toroid	110
“Ideal” Rectangular Cross Section Toroid	110
My Magnets (Part 1 of 3 Parts)	
—Passage from Francis Bitter’s <i>Magnets: The Education of a Physicist</i> . . .	110
3.8 Mutual Inductance	111
Series Connected Coils	111
Parallel Connected Coils	111
Coupling Coefficient	111
3.8.1 Mutual Inductances—Selected Analytic Expressions	112
Mutual Inductance between Two “Ring” Coils	112
Special Case 1: Two “Ring” Coils Far Apart	112
Mutual Inductance of a “Thin-Walled” Solenoid and a “Ring” Coil	112
Special Case 2: Thin-Walled Solenoid and Ring Coil Far Apart	113
Special Case 3: Thin-Walled Solenoid and Ring Coil Farther Apart	113
Ring Coil at the Middle of a Thin-Walled Solenoid	113
Special Case 4: “Long” Thin-Walled Solenoid and Ring Coil	114
Special Case 5: Ring Coil of Widely Differing Diameter	114
3.8.2 Mutual Inductance and Interaction Force	114
Magnetic Field (H) and Magnetic Induction (B)	115
DISCUSSION 3.1: Uniform-Current-Density Solenoids	115
PROBLEM 3.1: “Simple” solenoids	118
Solution to PROBLEM 3.1	119
My Magnets (Part 2 of 3 Parts)	
—Passage from Francis Bitter’s <i>Magnets: The Education of a Physicist</i> . . .	121
DISCUSSION 3.2: “Bitter” Magnet	122
A. Current Density, Field, Power	123
Current Density Distribution	123
Field	123
Field and Power	124
B. Current Density Distributions Other Than “Bitter”	125
Kelvin Coil	125
Gaume	125
Polyhelix	125
PROBLEM 3.2: Maximum field in a solenoidal coil	126
Solution to PROBLEM 3.2	127
My Magnets (Part 3 of 3 Parts)	
—Passage from Francis Bitter’s <i>Magnets: The Education of a Physicist</i> . . .	127

<i>DISCUSSION 3.3: Load Lines</i>	128
A. Solenoid Magnet Wound with “Isotropic” Superconductor	128
B. Solenoid Magnet Wound with “Anisotropic” Superconductor	129
<i>DISCUSSION 3.4: Superposition Technique</i>	130
A. End Field	130
B. Off-Center Axial Fields	130
<i>DISCUSSION 3.5: Hybrid Magnet</i>	132
A. Selected Hybrid Magnet Facilities	132
<i>High Field Magnet Laboratory, Radboud University, Nijmegen</i>	132
<i>High Field Laboratory, Tohoku University, Sendai</i>	132
<i>Grenoble High Magnetic Field Laboratory</i>	132
<i>Magnet Laboratory, National Research Institute of Materials Science</i>	132
<i>National High Magnetic Field Laboratory (NHMFL)</i>	132
B. NHMFL 45-T Hybrid Magnet	133
<i>Parameters of the 45-T Hybrid SCM</i>	134
C. Engineering Challenges of the Hybrid Magnet	134
D. Configuration & Unique Features	135
“Water” Magnet	135
Superconducting Magnet	135
E. Interaction Force	136
<i>DISCUSSION 3.6: “Double-Pancake” vs. “Layer-Wound”</i>	136
<i>Advantages & Disadvantages</i>	137
<i>PROBLEM 3.3: Helmholtz coil</i>	138
Solution to <i>PROBLEM 3.3</i>	139
<i>PROBLEM 3.4: Analysis of a Helmholtz coil—another method</i>	140
Solution to <i>PROBLEM 3.4</i>	141
<i>PROBLEM 3.5: Analysis of a spatially homogeneous magnet</i>	142
Solution to <i>PROBLEM 3.5</i>	144
<i>PROBLEM 3.6: Field expansion in Cartesian coordinates</i>	145
<i>Help from Van (Part 1 of 5 Parts)</i>	
—Passage from Francis Bitter’s <i>Magnets: The Education of a Physicist</i>	145
Solution to <i>PROBLEM 3.6</i>	146
<i>PROBLEM 3.7: Notched solenoid</i>	148
Solution to <i>PROBLEM 3.7</i>	149
<i>DISCUSSION 3.7: Field Analysis of a Pancake-Coil Magnet</i>	150
<i>Step 1: Two-Pancake Magnet—Pancake 1 & Pancake 2</i>	151
<i>Step 2: Four-Pancake Magnet—Addition of Pancakes 3 & 4</i>	151
<i>Step 3: 2N-Pancake Coil—Addition of Final Two Pancakes</i>	152

PROBLEM 3.8: Ideal dipole magnet 154
 Solution to PROBLEM 3.8 156
 PROBLEM 3.9: Ideal quadrupole magnet 159
 Solution to PROBLEM 3.9 160
 DISCUSSION 3.8: Two-“Racetrack” Coil Magnet 162
 A. Field at Magnet Center 163
 B. Field Near the Center 164
 C. Center Field from Four Current Elements 165
 D. Forces on Current Elements 166
 E. Interaction Forces Within Racetrack and Between Racetracks . . . 167
 Help from Van (Part 2 of 5 Parts)
 —Passage from Francis Bitter’s *Magnets: The Education of a Physicist* . . 167
 PROBLEM 3.10: Ideal toroidal magnet 168
 Solution to PROBLEM 3.10 169
 DISCUSSION 3.9: Nuclear Fusion and Magnetic Confinement 170
 PROBLEM 3.11: Fringing field 171
 Solution to PROBLEM 3.11 172
 DISCUSSION 3.10: Scaling a Solenoidal Magnet 173
 A. Spatial Homogeneity 173
 B. Center Field vs. Current Density 173
 C. Conductor Size & Operating Current 173
 D. Total Number of Turns 173
 E. Total Conductor Length, Operating Current & Ampere-Meter . . . 174
 F. Total Magnetic Energy 174
 Illustrative Example 174
 DISCUSSION 3.11: Particle Accelerators 175
 PROBLEM 3.12: Circulating proton in an accelerator 175
 Solution to PROBLEM 3.12 176
 PROBLEM 3.13: Two-coil magnet 177
 Solution to PROBLEM 3.13 180
 PROBLEM 3.14: Midplane axial force in a solenoid 182
 Solution to PROBLEM 3.14 183
 Help from Van (Part 3 of 5 Parts)
 —Passage from Francis Bitter’s *Magnets: The Education of a Physicist* . . 187
 PROBLEM 3.15: Midplane axial forces in a nested 2-coil magnet 188
 Solution to PROBLEM 3.15 189
 PROBLEM 3.16: Stresses in an epoxy-impregnated solenoid 191
 Solution to PROBLEM 3.16 192
 PROBLEM 3.17: Stresses & axial force in an HTS magnet 193

Solution to PROBLEM 3.17 195

Formula for Radial Build of a Close-Packed Hexagonal Winding 199

DISCUSSION 3.12: *Magnetic Force on an Iron Sphere* 200

 A. Force on Unsaturated Sphere 201

 B. Force on Saturated Sphere 201

DISCUSSION 3.13: *Radial Force in Two-Coil Magnet* 203

DISCUSSION 3.14: *Mechanical Support in the 45-T Hybrid* 204

Help from Van (Part 4 of 5 Parts)

 —Passage from Francis Bitter’s *Magnets: The Education of a Physicist* . . . 204

DISCUSSION 3.15: *Stresses in Composite Nb₃Sn Conductor* 205

 A. Equilibrium Equations 206

 B. Residual Strains 206

 C. Stresses in Bronze and Copper 207

PROBLEM 3.18: Self inductances of selected systems 208

 Solution to PROBLEM 3.18 209

DISCUSSION 3.16: *Mutual Inductance of Rogowski Coil* 213

DISCUSSION 3.17: *Force vs. Mutual Inductance* 213

Help from Van (Part 5 of 5 Parts)

 —Passage from Francis Bitter’s *Magnets: The Education of a Physicist* . . . 214

REFERENCES 215

CHAPTER 4 CRYOGENICS 219

4.1 Introduction 219

4.2 “Wet” and “Dry” Magnets 219

Cooling Methods for Superconducting Magnets 220

4.3 Cryogenics Issues—Cooling; Heating; Measurement 221

 4.3.1 Cooling Sources 221

 4.3.2 Heat Sources 221

 4.3.3 Measurement 221

4.4 Liquid Cryogen—for “Wet” Magnets 221

Boiling Heat Transfer Parameters 222

4.5 Solid Cryogen—for “Dry” Magnets 223

 4.5.1 “Wet” LTS Magnets vs. “Dry” HTS Magnets—Heat Capacities . 223

 4.5.2 Solid Cryogen—Neon, Nitrogen, and Argon 224

PROBLEM 4.1: Carnot refrigerator 225

 Solution to PROBLEM 4.1 226

DISCUSSION 4.1: *Cryocooler Performance* 227

 A. Specific Cooling Powers at Specific Temperatures 227

 B. Operation at Temperatures Other Than the Design Temperature . . . 228

DISCUSSION 4.2: Cooling Modes for Wet Magnets 229

 A. “Perfect” Cooldown Mode 229

 B. “Dunk” Mode 229

 C. Cooldown with Liquid Neon (LNe) or Liquid Nitrogen (LN₂) 229

DISCUSSION 4.3: “Cryocooling” HTS Magnet 231

DISCUSSION 4.4: Superfluidity 233

 A. Transport Properties 233

Heated Channel 235

 B. Heat Transfer—Kapitza Resistance 235

DISCUSSION 4.5: Subcooled 1.8-K Cryostat 236

 A. Refrigeration Power at 1.8 K 237

 B. Refrigeration Pumping Power Requirement 238

 C. Heat Leakage Through Hydraulic Communication 239

 D. Replenishment of 4.2-K Liquid 239

 E. Current Leads Between 4.2-K Reservoir and 1.8-K Vessel 240

DISCUSSION 4.6: Joule-Thomson Process 241

James Prescott Joule (1818–1889)

 —Passage from Isaac Asimov’s

Asimov’s Biographical Encyclopedia of Science and Technology 241

PROBLEM 4.2: Cryocooler-based “mini” helium liquefier 242

Sir James Dewar (1842–1923)

 —Passage from Isaac Asimov’s

Asimov’s Biographical Encyclopedia of Science and Technology 244

 Solution to Problem 4.2 245

DISCUSSION 4.7: Cryocooler vs. “Cryocirculator” 247

DISCUSSION 4.8: Radiative Heat Transfer 248

 A. Effect of Superinsulation Layers 250

 B. Practical Considerations of Emissivity 250

DISCUSSION 4.9: Convective Heat Transfer by Residual Gas 251

 A. “High” Pressure Limit 251

 B. “Low” Pressure Limit 251

DISCUSSION 4.10: Vacuum Pumping System 252

Vacuum Gauges 253

DISCUSSION 4.11: Cryocooled Solid Cryogen/Magnet 254

 A. Design and Operation Concept 254

Application to Persistent-Mode Magnets 254

 B. Thermal Diffusion in Solid 254

 “Slow” Heating 255

 Transient Heating 255

C. “Thermal Dry-Out”	256
<i>Solid Nitrogen-Liquid Neon Mixture To Suppress Thermal Dry-Out</i> .	256
PROBLEM 4.3: Solid cryogen cooled magnet	257
Solution to PROBLEM 4.3	259
DISCUSSION 4.12: <i>Temperature Rise vs. Field Homogeneity</i>	263
DISCUSSION 4.13: <i>Low-Temperature Thermometers</i>	264
A. Kelvin Scale	264
B. Requirements	264
C. Types of Thermometers	264
<i>Temperature Spectrum</i>	265
D. Signal Levels and Sensitivities of Selected Thermometers	266
<i>Additional Remarks, Including Magnetic Field Effects</i>	266
<i>Capacitance Thermometers</i>	267
<i>Fahrenheit Scale</i>	
—Passage from Linus Pauling’s <i>College Chemistry</i>	267
DISCUSSION 4.14: <i>Vapor-Cooled Copper Current Lead</i>	268
A. Power Density Equation	268
B. Cold-End Heat Input & Boil-Off Rate	269
C. Optimal Current-Lead Parameters	270
D. Standing Heat Input	271
E. Voltage Drop Across an Optimal Lead	272
F. Heating Upon Flow Stoppage	273
DISCUSSION 4.15: <i>“Dry” Leads—Normal Metal & HTS</i>	274
A. Normal Metal	274
B. HTS Extension	274
PROBLEM 4.4: Vapor-cooled HTS current lead	
—Fully Superconducting Version (FSV)	275
Solution to PROBLEM 4.4	277
PROBLEM 4.5: Vapor-cooled HTS current lead	
—Current-Sharing Version (CSV)	278
<i>Advantage of CSV</i>	278
<i>Analysis of Superconducting Section ($0 \leq z \leq \ell_{cs}$)</i>	278
<i>Analysis of Current-Sharing Section ($\ell_{cs} \leq z \leq \ell$)</i>	279
Solution to PROBLEM 4.5	281
<i>Thermal Conductivity & Electrical Resistivity Data of Ag-Au Alloys</i> .	284
DISCUSSION 4.16: <i>Protection of FSV and CSV Current Leads</i>	285
<i>Electricity</i>	
—Passage from Helen Davis’ <i>The Chemical Elements</i>	286
DISCUSSION 4.17: <i>HTS Current Lead—Copper Extension</i>	287

A. Coolant Fluid Flow Rate	287
B. Cold-End Heat Input & Power Balance	288
C. Liquid Nitrogen Mass Flow Rate	289
<i>Conversion from Wt% to At%</i>	289
PROBLEM 4.6: 6-kA vapor-cooled HTS current lead	290
PROBLEM 4.6A: FSV, with no parallel normal metal tapes	290
Solution to PROBLEM 4.6A	291
PROBLEM 4.6B: FSV, with parallel normal metal tapes	292
Solution to PROBLEM 4.6B	292
PROBLEM 4.6C: CSV, with parallel normal metal tapes	293
Solution to PROBLEM 4.6C	294
DISCUSSION 4.18: “Optimal” CSV Lead	296
<i>Heike Kamerlingh Onnes (1853–1926)</i>	
—Passage from K. Mendelssohn’s <i>The Quest for Absolute Zero</i>	296
PROBLEM 4.6D: Copper section (~80 K–300 K)	297
Solution to PROBLEM 4.6D	298
PROBLEM 4.7: Vapor-cooled brass current lead	300
<i>Overcurrent Mode</i>	301
Solution to PROBLEM 4.7	303
<i>Experimental Results of a Vapor-Cooled Brass Lead</i>	305
DISCUSSION 4.19: Vapor-Cooled Support Rods	307
DISCUSSION 4.20: Structural Materials for Cryogenics	307
REFERENCES	308
CHAPTER 5 MAGNETIZATION	313
5.1 Introduction	313
5.2 Bean’s Theory For a Type II Superconductor	313
5.2.1 No Transport Current	313
5.2.2 Effect of Transport Current on Magnetization	316
5.3 Measurement Technique	318
DISCUSSION 5.1: Magnetization with Transport Current	321
A. Field and then Transport Current	321
B. Transport Current and then Field	324
C. Field and then Current Changes	326
<i>Magnetization Functions—Summary</i>	328
DISCUSSION 5.2: SQUID for Magnetization Measurement	328
DISCUSSION 5.3: Magnetization in a “Bean Filament”	329
Part 1: Field Parallel to the Filament’s Axis	329
A. Initial State	329

B. Critical State and Beyond	329
<i>Part 2: Field Perpendicular to the Filament's Axis</i>	330
A. Bean Slab	330
B. Filament	330
<i>DISCUSSION 5.4: J_c from Magnetization</i>	331
PROBLEM 5.1: Magnetization measurement	332
Solution to PROBLEM 5.1	334
<i>Estimate of J_c (4.2 K, 2.5 T)</i>	334
<i>DISCUSSION 5.5: Magnetic and Thermal Diffusion</i>	336
PROBLEM 5.2: Criterion for flux jumping	338
Solution to PROBLEM 5.2	339
PROBLEM 5.3: Flux jumps	342
Solution to PROBLEM 5.3	343
PROBLEM 5.4: Wire twisting	344
Solution to PROBLEM 5.4	346
PROBLEM 5.5: Magnetization of conductors	347
Solution to PROBLEM 5.5	348
<i>DISCUSSION 5.6: Twisting</i>	348
<i>DISCUSSION 5.7: Flux Jumping in HTS?</i>	349
A. Size Criterion for "Complete" Flux Jumping	349
B. Flux Jumping in HTS	349
REFERENCES	350
CHAPTER 6 STABILITY	351
6.1 Introduction	351
<i>LTS vs. HTS</i>	351
6.2 Stability Theories and Criteria	352
6.2.1 Concepts Derived from Equation 6.1	353
<i>Flux Jumping</i>	353
<i>Cryostability</i>	353
<i>Dynamic Stability</i>	353
<i>Equal Area</i>	353
<i>MPZ</i>	353
<i>Nonsteady Cases</i>	353
6.2.2 Thermal Energy	354
6.2.3 Thermal Conduction	354
6.2.4 Joule Heating	355
6.2.5 Disturbance Spectra	356
6.2.6 "Stability Margin" vs. Disturbance Energy	357

6.2.7 Cooling	358
6.3 Current Densities	359
6.3.1 Cross Sectional Areas	360
6.3.2 Composite Superconductor	360
<i>Superconductor Critical Current Density</i>	360
<i>Engineering (or Conductor) Critical & Operating Current Densities</i> .	360
<i>Matrix Current Density</i>	361
6.3.3 Current Density in Winding Pack	361
<i>Current Density for Cable-In-Conduit (CIC) Conductor</i>	361
<i>DISCUSSION 6.1: Cryostability—Circuit Model</i>	362
PROBLEM 6.1: Cryostability—temperature dependence	363
Solution to PROBLEM 6.1	364
<i>DISCUSSION 6.2: Stekly Cryostability Criterion</i>	365
<i>DISCUSSION 6.3: Composite Superconductors</i>	367
A. Monolith	367
B. Built-Up	367
PROBLEM 6.2: Cryostability—nonlinear cooling curves	367
Solution to PROBLEM 6.2	368
<i>DISCUSSION 6.4: “Equal-Area” Criterion</i>	369
<i>DISCUSSION 6.5: Superconductor “Index” (n)</i>	370
PROBLEM 6.3: Composite Superconductor (n)—circuit model	371
Solution to PROBLEM 6.3	372
PROBLEM 6.4: Composite YBCO under a current pulse	374
Solution to PROBLEM 6.4	376
<i>DISCUSSION 6.6: Cable-in-Conduit (CIC) Conductors</i>	378
A. Power Density Equations	378
B. Components of CIC Conductor	379
<i>Cable</i>	379
<i>Helium</i>	379
<i>Conduit</i>	380
C. Stability	381
D. Other Issues	382
<i>AC Losses</i>	382
<i>Joint</i>	382
<i>Ramp-Rate Limitation</i>	382
PROBLEM 6.5: V vs. I traces of a cooled composite conductor	383
Solution to PROBLEM 6.5	384
PROBLEM 6.6: Stability analysis of Hybrid III SCM	386

Solution to PROBLEM 6.6	388
<i>DISCUSSION 6.7: Cryostable vs. Quasi-Adiabatic Magnets</i>	390
<i>DISCUSSION 6.8: The MPZ Concept</i>	391
PROBLEM 6.7: Dissipation density in adiabatic winding	392
Solution to PROBLEM 6.7	393
REFERENCES	395
CHAPTER 7 AC AND OTHER LOSSES	399
7.1 Introduction	399
7.2 AC Losses	400
<i>Superconductor Orientations Relative to External Field</i>	400
<i>Time-Varying Magnetic Field</i>	401
<i>Tables for Energy Densities of AC Losses</i>	401
7.2.1 Hysteresis Loss	402
<i>Hysteresis Loss for Bean Slab</i>	402
<i>Bean Slab under External Field Time Sequences</i>	403
7.2.2 Coupling Loss in Multifilamentary Composite	406
<i>Coupling Time Constant</i>	406
<i>Effective Matrix Resistivity</i>	407
7.2.3 Eddy-Current Loss	407
7.3 Other Losses	408
7.3.1 Splice Resistance	408
<i>Lap Splice (Joint)</i>	408
<i>Contact Resistance</i>	409
<i>Mechanical-Contact Switch</i>	410
7.3.2 Mechanical Disturbances	410
<i>Conductor Motion and Remedy</i>	411
<i>Fracture of Filler Material and Remedy</i>	412
<i>Some Consequences of Friction</i>	
—Passage from Ernest Rabinowicz's <i>Friction and Wear of Materials</i>	412
7.4 Acoustic Emission Technique	413
7.4.1 Detection of Mechanical Events—LTS Magnets	413
7.4.2 Application to HTS Magnets	413
PROBLEM 7.1: Hysteresis energy density—"Virgin" Bean slab	
Under "small" field sequences (Cases 1–3)	415
Solution to PROBLEM 7.1	416
<i>Energy Flow</i>	418
PROBLEM 7.2: Hysteresis energy density—"Virgin" Bean slab	
Under "medium" field sequences (Cases 1–3)	419

Solution to PROBLEM 7.2	420
PROBLEM 7.3: Hysteresis energy density—“Virgin” Bean slab Under “large” field sequences (Cases 1–3)	422
Solution to PROBLEM 7.3	423
DISCUSSION 7.1: Hysteresis Energy Density— Magnetized Bean Slab (Cases 4–6)	424
DISCUSSION 7.2: Bean Slab Carrying DC Current	429
Cases 1i and 2i	429
Cases 4i and 5i—“Small” Field Excitation	430
Cases 4i and 5i—“Large” Field Excitation	431
PROBLEM 7.4: Hysteresis energy density—Bean Slab with DC transport current (Cases 4i–6i)	432
Solution to PROBLEM 7.4	433
PROBLEM 7.5: Self-field hysteresis energy density—Bean slab	436
Solution to PROBLEM 7.5	437
Tables Summarizing Formulas for AC Losses	438
DISCUSSION 7.3: AC Losses for the Whole Magnet	444
DISCUSSION 7.4: Techniques to Measure AC Losses	444
DISCUSSION 7.5: AC Losses in CIC Conductors	446
DISCUSSION 7.6: AC Losses in HTS	446
PROBLEM 7.6: Hysteresis loss in Nb ₃ Sn filament	447
Solution to PROBLEM 7.6	448
PROBLEM 7.7: AC losses in Hybrid III SCM	449
“Burst Disk” and Diffuser for Hybrid III Cryostat	450
Solution to PROBLEM 7.7	451
DISCUSSION 7.7: Splice Dissipation in Hybrid III NbTi Coil	454
A. Splice Resistances	454
B. Total Splice Dissipation	454
DISCUSSION 7.8: Persistent-Mode Operation & “Index”	455
A. Circuit & Operation	455
Circuit	455
Operation	456
B. Design of PCS	456
Normal State Resistance	456
Stability and Protection	457
Thermal Insulation	457
C. Index Loss	457
D. Experimental Determination of Index	458
REFERENCES	459

CHAPTER 8 PROTECTION	467
8.1 Introductory Remarks	467
8.1.1 Thermal Energy vs. Magnetic Energy Densities	467
8.1.2 Hot Spot and Hot-Spot Temperature	468
8.1.3 Temperature Data for Winding Materials	469
8.1.4 Safe, Risky, and Very Risky Ranges of T_f	470
8.1.5 Temperature-Induced Strains	470
8.2 Adiabatic Heating	471
8.2.1 Adiabatic Heating Under Constant-Current Mode	472
8.2.2 Adiabatic Heating Under Current-Discharge Mode	474
8.2.3 Adiabatic Heating in Magnet with Shorted Terminals	475
8.2.4 Adiabatic Heating Under Constant-Voltage Mode	478
8.3 High Voltage	480
8.3.1 Arcing Environments	480
8.3.2 Paschen Voltage Test	481
8.3.3 Peak Internal Voltage Within a Quenching Magnet	481
<i>Internal Voltage Distribution</i>	481
<i>Voltage Criterion for Matrix Current Density</i>	483
8.4 Normal-Zone Propagation (NZIP)	484
8.4.1 Longitudinal (Axial) NZP Velocity	484
<i>NZIP Under Adiabatic Condition</i>	484
<i>Composite Superconductor</i>	487
<i>Experimental Determination of Longitudinal NZP Velocity</i>	487
8.4.2 NZP in “Cooled” Conditions	489
8.4.3 Transverse (Turn-To-Turn) Velocity	490
<i>Contact Thermal Resistance</i>	490
<i>Experimental Results</i>	491
8.4.4 Thermal-Hydraulic Quenchback (THQB)	492
8.4.5 AC-Losses-Assisted NZP	492
8.5 Computer Simulation	493
8.6 Self-Protecting Magnets	494
8.6.1 Size Limit	494
<i>Size Limit Under Constant Heating</i>	494
<i>Size Limit in Magnet with Shorted Terminals</i>	495
8.7 Passive Protection of “Isolated” Magnets	496
<i>Two-Coil Magnet</i>	498
8.8 Active Protection	501
8.8.1 Overheating	501

8.8.2 Overstraining in a Multi-Coil Magnet	501
8.8.3 Active Protection Technique: Detect-and-Dump	502
<i>Discharge Voltage: V_D</i>	503
<i>Switching Delay</i>	504
8.8.4 Active Protection Technique: Detect-and-Activate-the-Heater . .	504
<i>Passive Activate-the Heater</i>	504
8.8.5 Quench-Voltage Detection Technique—Basic Bridge Circuit . .	505
PROBLEM 8.1: Warming up a large superconducting magnet	507
Solution to PROBLEM 8.1	508
PROBLEM 8.2: Protection of 6-kA vapor-cooled HTS lead	510
Solution to PROBLEM 8.2	510
PROBLEM 8.3: Protection of a cryostable NbTi magnet	511
Solution to PROBLEM 8.3	511
PROBLEM 8.4: Hot-spot temperatures in Hybrid III SCM	512
Solution to PROBLEM 8.4	513
<i>DISCUSSION 8.1: Quench-Voltage Detection—A Variation</i>	515
A. Technique I	515
B. Technique II	515
PROBLEM 8.5: Design of a dump resistor	517
Solution to PROBLEM 8.5	518
<i>DISCUSSION 8.2: “Slow” Discharge Modes for a Magnet</i>	519
A. Low-Resistance Resistor	519
B. Series of Diodes	520
<i>DISCUSSION 8.3: Design of a Low-Resistance Resistor</i>	520
<i>DISCUSSION 8.4: Overheating & Internal Voltage Criteria</i>	522
<i>DISCUSSION 8.5: Protection of Bi2223 Tape Current Lead</i>	523
A. Peak-Temperature Spot Under Uniform Heating	523
B. Meltdown Time	524
C. Additional Remarks	524
<i>DISCUSSION 8.6: Active Protection of an MgB_2 Magnet</i>	525
A. Persistent-Mode Magnets—Passive Protection	526
B. Detect-and-Activate-the-Heater for a Persistent-Mode HTS Magnet .	526
C. Minimum Winding Portion Required to be Driven Normal	527
D. “Protection Heater”	527
E. Quench Detection: Heating Process & Required Detection Time . . .	528
F. Hot Spot Size	528
G. Growth of Hot-Spot Resistance and Resistive Voltage with Time . .	528
H. Quench Detection Techniques	529

PROBLEM 8.6: Passive protection of an NMR magnet	530
Solution to PROBLEM 8.6	535
DISCUSSION 8.7: <i>To Protect or Not to Protect an HTS...</i>	538

APPENDIX IA PHYSICAL CONSTANTS AND CONVERSION FACTORS	617
Table A1.1 Selected Physical Constants	617
Table A1.2 Selected Conversion Factors	618
APPENDIX IB UNIFORM-CURRENT-DENSITY SOLENOIDAL COIL FIELD ERROR COEFFICIENTS	619
APPENDIX II THERMODYNAMIC PROPERTIES OF CRYOGENS	621
Property Data Sources	621
Table A2.1 Selected Properties of Cryogens at 1 atm	622
Property Data Sources (continuation from p. 621)	622
Table A2.2 Density and Enthalpy Data of Solid Cryogens at 1 bar/1 atm	623
Table A2.3a Helium at Saturation	624
Table A2.3b Density and Enthalpy Data of Helium at 1, 6, and 10 atm	625
Table A2.4a Nitrogen at Saturation	626
Table A2.4b Density and Enthalpy Data of Nitrogen at 1, 15, and 20 atm	627
Table A2.5 Hydrogen, Neon, and Argon at Saturation	628
Table A2.6 Density and Enthalpy Data of Neon at 1, 10, and 20 atm	629
Table A2.7 Selected Thermodynamic Properties of Cryogen <i>Gases</i> at 1 atm	630

APPENDIX III PHYSICAL PROPERTIES OF MATERIALS	631
Property Data Sources	631
A3.1a Thermal Conductivity vs. Temperature Plots: Mainly Conductive Materials	632
A3.1b Thermal Conductivity vs. Temperature Plots: Nonconductive Materials	633
A3.2a Heat Capacity vs. Temperature Plots: Aluminum; Copper; Silver; Stainless Steel	634
A3.2b Enthalpy vs. Temperature Plots: Aluminum; Copper; Silver; Stainless Steel; Solid Neon; Solid Nitrogen	635
Table A3.1 Heat Capacity Data for Selected Materials	636
Table A3.2 Enthalpy Data for Selected Materials	637
Table A3.3 Mechanical Properties of Selected Materials	638
Table A3.4 Mean Linear Thermal Expansion Data of Selected Materials	638
APPENDIX IV ELECTRICAL PROPERTIES OF NORMAL METALS	639
Property Data Sources	639
A4.1 Normalized Electrical Resistivity vs. Temperature Plots: Conductive Metals and Stainless Steel	640
A4.2 RRR vs. Magnetic Field Plots: Aluminum; Copper; Silver	641
Table A4.1 4.2-K Contact Resistance vs. Contact Pressure Data	641
Table A4.2 Electrical Resistivity vs. Temperature Data of Selected Metals.	642
Table A4.3 Electrical Resistivity of Selected Heater Metals.	642
APPENDIX V PROPERTIES OF SUPERCONDUCTORS	643
Property Data Sources & Selected References	643
A5.1 Current Densities of NbTi, Nb ₃ Sn, MgB ₂ , YBCO, Bi2223	644
A5.2 Scaling Laws for NbTi and Nb ₃ Sn.	644
Table A5.1 J_c or J_e Data: NbTi, Nb ₃ Sn, MgB ₂ (Wires); YBCO, Bi2223 (Tapes)	645
A5.3 Mechanical and Thermal Properties	646
Table A5.2 Selected Mechanical and Thermal Property Data	646
Property Data Sources & Selected References (continuation from p. 643)	647
APPENDIX VI GLOSSARY	649
APPENDIX VII QUOTATION SOURCES & CHARACTER IDENTIFICATION	659
INDEX	661
