Plasma Physics for Controlled Fusion

Contents

Preface

1 Nature of Plasma 1

1.1 Introduction 1
1.2 Charge Neutrality and Landau Damping 2
1.3 Fusion Core Plasma 5

2 Orbit of Charged Particles in Various Magnetic Configurations 11

2.1 Orbit of Charged Particles 11
2.1.1 Cyclotron Motion 11
2.1.2 Drift Velocity of Guiding Center 12
2.1.3 Polarization Drift 16
2.1.4 Ponderomotive Force 16
2.2 Scalar Potential and Vector Potential 18
2.3 Magnetic Mirror 20
2.4 Toroidal System 22
2.4.1 Magnetic Flux Function 22
2.4.2 Hamiltonian Equation of Motion 23
2.4.3 Particle Orbit in Axially Symmetric System 25
2.4.4 Drift of Guiding Center in Toroidal Field 26
2.4.5 Effect of Longitudinal Electric Field on Banana Orbit 30
2.4.6 Precession of Trapped Particle 32
2.4.7 Orbit of Guiding Center and Magnetic Surface 36
2.5 Coulomb Collision and Neutral Beam Injection 37
2.5.1 Coulomb Collision 37
2.5.2 Neutral Beam Injection 42
2.5.3 Resistivity, Runaway Electron, Dreicer Field 43
2.6 Varity of Time and Space Scales in Plasmas 44

3 Magnetohydrodynamics 47

3.1 Magnetohydrodynamic Equations for Two Fluids 47
3.2 Magnetogydrodynamic Equations for One Fluid 49
3.3 Simplified Magnetohydrodynamic Equations 51
3.4 Magnetoacoustic Wave 53

4 Equilibrium 57

4.1 Pressure Equilibrium 57
4.2 Grad-Shafranov Equilibrium Equation 58
4.3 Exact Solution of Grad-Shafranov Equation 60
4.4 Tokamak Equilibrium 63

4.5 Poloidal Field for Tokamak Equilibrium 70
4.6 Upper Limit of Beta Ratio 73
4.7 Pfirsch-Schlüter Current 74
4.8 Virial Theorem 77

5 Confinement of Plasma (Ideal Cases) 81
5.1 Collisional Diffusion (Classical Diffusion) 83
5.1.1 Magnetohydrodynamic Treatment 83
5.1.2 A Particle Model 85
5.2 Neoclassical Diffusion of Electrons in Tokamak 86
5.3 Bootstrap Current 89

6 Magnetohydrodynamic Instabilities 91
6.1 Interchange Instabilities 92
6.1.1 Interchange Instability 92
6.1.2 Stability Criterion for Interchange Instability 95
6.2 Formulation of Magnetohydrodynamic Instabilities 98
6.2.1 Linearization of Magnetohydrodynamic Equations 98
6.2.2 Rayleigh-Taylor (Interchange) Instability 101
6.3 Instabilities of Cylindrical Plasma with Sharp Boundary: (Kruskal-Shafranov Condition) 103
6.4 Energy Principle 107
6.5 Instabilities of Diffuse-Boundary Configurations 109
6.5.1 Energy Integral of Plasma with Diffuse Boundary 109
6.5.2 Suydam's Criterion 114
6.5.3 Tokamak Configuration 115
6.6 Hain-Lüst Magnetohydrodynamic Equation 117
6.7 Ballooning Instability 119
6.8 η_i Mode due to Density and Temperature Gradient 123

7 Resistive Instability 127
7.1 Tearing Instability 127
7.2 Neoclassical Tearing Mode 133
7.3 Resistive Drift Instability 139
7.4 Resistive Wall Mode 143

8 Boltzmann's Equation 149
8.1 Phase Space and Distribution Function 149
8.2 Boltzmann's Equation and Vlasov's Equation 150
8.3 Fokker-Planck Collision Term 152
8.4 Quasi-Linear Theory of Evolution in Distribution Function 154

9 Waves in Cold Plasmas 157
9.1 Dispersion Equation of Waves in Cold Plasma 158
9.2 Properties of Waves 161
9.2.1 Polarization and Particle Motion 161
9.2.2 Cutoff and Resonance 163
9.3 Waves in Two-Components Plasma 164

9.4 Various Waves 168
9.4.1 Alfvén Wave 168
9.4.2 Ion Cyclotron Wave and Fast Wave 169
9.4.3 Lower Hybrid Resonance 170
9.4.4 Upper Hybrid Resonance 172
9.4.5 Electron Cyclotron Wave 172
9.5 Conditions for Electrostatic Waves 174

10 Waves in Hot Plasmas 177
10.1 Landau Damping and Cyclotron Damping 177
10.1.1 Landau Damping (Amplification) 177
10.1.2 Transit-Time Damping 180
10.1.3 Cyclotron Damping 181
10.2 Formulation of Dispersion Relation in Hot Plasma 183
10.3 Solution of Linearized Vlasov Equation 186
10.4 Dielectric Tensor of Hot Plasma 187
10.5 Dielectric Tensor of Bi-Mawellian Plasma 190
10.6 Plasma Dispersion Function 191
10.7 Dispersion Relation of Electrostatic Wave 195
10.8 Dispersion Relation of Electrostatic Wave of Inhomogeneous Plasma 196
10.9 Velocity Space Instabilities 200
10.9.1 Drift Instability 200
10.9.2 Ion Temperature Gradient Instability 201
10.9.3 Various Velocity Space Instabilities 201

11 Wave Heating and Current Drive 203
11.1 Energy Flow 204
11.2 Ray Tracing 207
11.3 Dielectric Tensor of Hot Plasma, Wave Absorption 209
11.4 Wave Heating in Ion Cyclotron Range of Frequency 214
11.5 Lower Hybrid Wave Heating 217
11.6 Electron Cyclotron Heating 221
11.7 Lower Hybrid Current Drive 224
11.8 Electron Cyclotron Current Drive 228
11.9 Neutral Beam Current Drive 230

12 Instabilities driven by Energetic Particles 235
12.1 Fishbone Instability 235
12.1.1 Formulation 235
12.1.2 MHD Potential Energy 236
12.1.3 Kinetic Integral of Hot Component 238
12.1.4 Growth Rate of Fishbone Instability 241
12.2 Toroidal Alfvén Eigenmodes 243
12.2.1 Toroidicity Induced Alfvén Eigenmode 244
12.2.2 Instabilities of TAE Driven by Energetic Particles 248
12.2.3 Various Alfvén Modes 255

13 Plasma Transport by Turbulence 259

13.1 Fluctuation Loss, Bohm, GyroBohm Diffusion 259
13.2 Loss by Magnetic Fluctuation 264
13.3 Dimensional Analysis of Transport 265
13.4 Analysis by Computer Simulations 271
13.4.1 Gyrokinetic Particle Model 271
13.4.2 Full Orbit Particle Model 276
13.5 Zonal Flow 280
13.5.1 Hasegawa-Mima Equation for Drift Turbulence 280
13.5.2 Generation of Zonal Flow 287
13.5.3 Geodesic Acoustic Mode (GAM) 292
13.5.4 Zonal Flow in ETG Turbulence 294

14 Development of Fusion Researches 299

15 Tokamak 311

15.1 Tokamak Devices 311
15.2 Stability of Equilibrium Plasma Position 315
15.3 MHD Stability and Density Limit 320
15.4 Beta Limit of Elongated Plasma 322
15.5 Impurity Control, Scrape-Off Layer and Divertor 325
15.6 Confinement Scaling of L Mode 331
15.7 H Mode and Improved Confinement Modes 333
15.8 Steady State Operation 340
15.9 Parameters of Tokamak Reactor 344
15.10 Trials to Innovative Tokamaks 352
15.10.1 Spherical Tokamak 352
15.10.2 Trials to Innovative Tokamak Reactors 354

16 Reversed Field Pinch 359

16.1 Reversed Field Pinch Configuration 359
16.2 Taylor's Relaxation Theory 359
16.3 Relaxation Process 362
16.4 Confinement of RFP 366

17 Stellarator 373

17.1 Helical Field 373
17.2 Stellarator Devices 377
17.3 Neoclassical Diffusion in Helical Field 379
17.4 Confinement of Stellarator 383
17.5 Quasi-Symmetric Stellarator Systems 386
17.6 Conceptual Design of Stellarator Reactor 389

18 Open End System 393

18.1 Confinement Times in Mirrors and Cusps 393
18.2 Confinement Experiments with Mirrors 395
18.3 Instabilities in Mirror Systems 396
18.4 Tandem Mirrors 398
18.4.1 Theory 398
18.4.2 Experiments 401

19 Inertial Confinement 409

19.1 Pellet Gain 409
19.2 Implosion 414
19.3 MHD Instabilities 417
19.4 Fast Ignition 419

A Derivation of MHD Equations of Motion 425

B Energy Integral of Axisymmetric Toroidal System 429

B.1 Energy Integral in Illuminating Form 429
B.2 Energy Integral of Axisymmetric Toroidal System 431
B.3 Energy Integral of High n Ballooning Modes 436

C Quasi-Symmetric Stellarators 439

C.1 Magnetic Coordinates and Natural Coordinates 439
C.2 Boozer Equation of Drift Motion 444

Physical Constants, Plasma Parameters and Mathematical Formula 449

Index 453
