1 Nuclear Power Plant Facilities and Regulatory Guides	1
1.1 General Introduction	1
1.2 British Commercial Nuclear Power Station – Commissioned and Non-commissioned	1
1.2.1 General	1
1.3 Reactor Power Stations Based on BWR, PHWR and PWR ...	36
1.3.1 Boiling Water Reactors (BWR)	36
1.3.2 Pressurised Heavy Water Reactors (PHWR)	37
1.3.3 Pressurised Water Reactors (PWR)	37
1.4 Additional Advanced Reactor Stations	41
1.4.1 General Introduction	41
1.4.2 Fast Breeder Reactor	47
1.4.3 New Diversified Systems	48
1.4.4 EU-APWR	49
1.5 Regulator Guides	49
1.6 Boiling Water Reactors (BWR), Pressurised Heavy Water Reactor (PHWR) and Pressurised Water Reactor (PWR)	57
References	57
2 Loads and Material Properties for Nuclear Facilities – A General Survey	61
2.1 Introduction	61
2.2 Loads	69
2.2.1 Service Loads	69
2.2.2 Operating Basis Earthquake (E_o)	71
2.2.3 Extreme or Severe Loads	73
2.3 Determination of Impulse/Impact caused by Aircraft and Missiles: Load (I)	107
2.3.1 General	107
2.3.2 Aircraft Impact on Nuclear Structures – Peak Displacement and Frequency	115
2.3.3 Finite Element Applications	117

2.3.4	Additional Data on Containment Parameters	118
	References	124
3	Dynamic Finite Element Analysis	133
3.1	Introduction	133
3.1.1	Finite Element Equations	133
3.2	Steps for Dynamic Non-linear Analysis	145
3.2.1	Buckling State and Slip of Layers for Composite Sections	149
3.2.2	Strain Rate Effects Based on the Elastic-Viscoplastic Relationship for Earth Materials Under Impact and Explosion	151
3.2.3	Finite Element of Concrete Modelling	154
3.3	Ice/Snow Impact	163
3.4	Impact Due to Missiles, Impactors and Explosions: Contact Problem Solutions	164
3.5	High Explosions	166
3.6	Spectrum Analysis	166
3.7	Solution Procedures	170
3.7.1	Time-Domain Analysis	170
3.7.2	Frequency-Domain Analysis	172
3.7.3	Runge-Kutta Method	173
3.7.4	Keierleber Method	173
3.7.5	Additional Solution Procedure	176
3.7.6	Newton-Raphson Method	176
3.7.7	Modified Newton-Raphson Method	177
3.8	Geometrically Non-linear Problems in Finite Element	179
3.8.1	Introduction	179
3.9	Finite Element Analysis of Explosion in Nuclear Facilities Using the Method of Explosive Factor	181
3.9.1	Good Achievement of the Explosive Burn	183
3.10	Finite Element Method Schemes	184
	References	186
4	Steel Pressure Vessels for Nuclear Facilities	187
4.1	General Introduction	187
4.2	General Design Criteria for Pressure Vessels	188
4.2.1	Introduction	188
4.3	Stress Analysis of Vessel Shell Components	192
4.3.1	Shape and Curvature	192
4.3.2	Boundary and Edge Conditions	193
4.3.3	Generalized Analysis of Thin Shell Surfaces of the Reactor Vessels	193
4.3.4	The Equations of Equilibrium of the Element of a Shell of Revolution	197

4.3.5	Shells of Revolution: Axisymmetric Loading	200
4.3.6	Cylindrical Shell Surfaces of the Vessel	201
4.4	Membrane Solution of Domical Surfaces	203
4.4.1	Elliptical Dome-Shaped Surfaces of the Vessel	209
4.4.2	Torispherical Shell Surfaces of the Reactor Vessel Top Dome	211
4.5	Nuclear Reactor: Accident Analysis	214
4.5.1	PWR Loss-of-Coolant Accident (LOCA)	214
4.6	State-of-the-art Software for 3D Fracture Mechanics Simulation (ZENCRACK)	231
5	Concrete Reactor Pressure Vessels	239
5.1	Introduction	239
5.2	Historical Development, Existing Analyses and Scope of Research	242
5.2.1	General	242
5.2.2	Problems Associated with Vessels	245
5.2.3	Vessel Layouts and Finite Element Mesh Schemes	248
5.2.4	Design Analysis	248
5.3	Ultimate Conditions	252
5.4	Methods of Analysis	252
5.5	Model Testing	253
5.6	Analysis of Results	257
5.7	Fundamental Elements of the Concrete Pressure Vessels	261
5.7.1	Prestressing Systems	261
5.7.2	Liner	263
5.7.3	Bonded Reinforcement	263
5.7.4	Embedded Elements	265
5.7.5	The Concrete	266
5.8	Ultimate Conditions	266
5.9	Methods of Analysis	266
5.10	Analysis of Results	266
5.10.1	Oldbury Vessel	271
5.10.2	High-Temperature Gas-Cooled Reactor Vessel (HTGCR)	275
5.11	Thermal Analysis of Vessels	295
5.12	Concrete Failure Theories	295
5.13	The Contribution Made by the Steel Liner	297
5.14	Prestressing Systems	297
5.15	Limit State Formulation	297
5.15.1	Analysis of Flexural Failure	307
5.16	Quality Assurance and Control	331
5.17	Conclusions	332

10 Elemental Design Analysis for Auxillary Structures Associated with Nuclear Facilities 593

10.1 General Introduction 593

10.2 Background to Eurocode EC-3 593

 10.2.1 Axially Loaded Members: Definition and Formulae 595

 10.2.2 Tension Members 595

 10.2.3 Compression Members 595

 10.2.4 Buckling Resistance 595

10.3 Beams 596

10.4 Shear Buckling 596

10.5 Axially Loaded Member. 596

10.6 Resistance of Webs to Transverse Compression Forces 597

 10.6.1 WE10.1 597

 10.6.2 WE10.2 602

 10.6.3 WE10.3 603

10.7 A Brief of Systematic EC-2 Design 605

 10.7.1 Rectangular Sections with Tension and Compression Reinforcement with Moment Redistribution Applied (Based on the UK Annex to EC2) 607

 10.7.2 Design of Shear 608

 10.7.3 Vertical Stirrups or Links 608

 10.7.4 Floor Slab with Different and Boundary Conditions. 610

 10.7.5 Short and Slender Columns in Reinforced Concrete 610

 10.7.6 WE10.5 612

 10.7.7 WE10.6 613

 10.7.8 WE10.7 617

 10.7.9 WE10.8 618

 10.7.10 WE10.9 619

10.8 A Nuclear Laboratory: A Case Study 621

 10.8.1 Proposal and Preliminary Data. 621

 10.8.2 Loadings 621

 10.8.3 Site Condition 623

 10.8.4 Loading on the Roof. 623

 10.8.5 Design of Roof Slab 624

 10.8.6 Design for Bending and Long Span of Slab 625

 10.8.7 Design of Roof Frame 626

 10.8.8 Design of Braced Column. 629

 10.8.9 Design Base Plate for Inner Column. 635

 10.8.10 Design of Base Plate for Outer Column 635

 10.8.11 Design for Wind-Loading Resistance 636

10.8.12 Design of Diagonal Ties of Two Edge Column 639

10.8.13 Foundation Design 640

10.8.14 Wall Design 642

10.8.15 Beam Design 642

10.8.16 Column Design 644

Appendix A: Prestressing Systems and Anchorage Design. 653

Appendix B: Analytical Formulation for the Liner and Penetration. 675

Appendix C: Movements in Prestressed Concrete Reactor and Containment Vessels. 705

Appendix D: Safe Analysis for Cooling Pipes for Reactor And Containment Vessels. 723

Appendix E: Programs Subroutines (For ISOPAR and F. BANG) 737

Appendix F: Simplified Dynamic Analysis of Towers, Chimneys And Frames As Auxiliary Structures 757
