General Introduction.....	1
R. Brun	
References	9
Chapter 1: Thermodynamic Properties of Gases behind Shock Waves	11
M. Capitelli, D. Bruno, G. Colonna, G. d'Ammando, A. d'Angola, D. Giordano,	
C. Gorse, A. Laricchiuta, S. Longo	
1 Introduction	11
2 Partition Functions for Atomic Levels. General and Few-Level Approaches	13
3 Partition Functions for Diatomic Molecules.....	15
4 Transport Cross Sections and Collision Integrals	18
4.1 Phenomenological Approaches for Unknown Colliding Systems	19
4.2 Resonant Charge Transfer.....	20
4.3 Neutral-Neutral Interactions.....	22
4.4 Neutral-Ion Interactions	25
4.5 Charge-Charge Interactions	26
4.6 Electron-Neutral Interactions	27
5 Thermodynamic Properties of Thermal Plasmas: The Cut-Off Issue	28
5.1 Cut-Off Criteria.....	29
5.1.1 The Ground State Method	29
5.1.2 Debye-Hückel Based Criteria.....	29
5.1.3 The Fermi Criterion.....	30
5.2 The Cut-Off Criteria Based on the Solution of Schrödinger Equation....	30
5.3 Case Study: Air Plasma.....	34
6 Transport of Two-Temperature Plasmas	41
7 Transport Properties of Plasmas: The Role of Electronically Excited States ...	43
8 Conclusions	47
Acknowledgments..	47
Appendix: Thermodynamic and Transport Properties of Air Plasmas	48
References	54
Chapter 2: Non-equilibrium Kinetics and Transport Properties behind Shock Waves	59
E.V. Kustova, E.A. Nagnibeda	
1 Introduction	59
2 State-to-State Approach.....	60

2.1	Distribution Functions and Macroscopic Parameters.....	60
2.2	Governing Equations.....	61
2.3	First-Order Approximation.	63
3	Quasi-stationary Approaches.....	71
3.1	Vibrational Distributions: Governing Equations.....	71
3.2	Transport Terms	75
3.3	Production Terms	77
4	Non-equilibrium Processes behind Shock Waves in Air Components and CO ₂ Mixtures	79
4.1	Non-equilibrium Kinetics and Transport Properties in Diatom Gas Mixtures.....	79
4.1.1	Governing Equations and Flow Parameters	79
4.1.2	Transport Properties	83
4.1.3	Electronic Excitation and Radiation	84
4.2	Non-equilibrium Kinetics and Transport Processes in Air Mixture.....	87
4.3	Mixtures Containing CO ₂ Molecules	90
	References	96
Chapter 3: Non-equilibrium Kinetics behind Shock Waves Experimental Aspects		99
L. Ibraguimova, O. Shatalov		
1	Introduction	99
2	Vibrational Relaxation of Diatomic Molecules	100
2.1	Vibrational Relaxation of O ₂ , N ₂ , CO, NO	100
2.2	Vibrational Relaxation of Diatomic Molecules in Collisions with Potentially Reactive Atoms	104
2.3	Vibrational Relaxation of H ₂ and D ₂	106
2.4	Vibrational Relaxation of Halides and Hydrogen Halides	107
3	V-T Relaxation of Three- and Multi-atomic Molecules	111
3.1	CO ₂ V-T Relaxation.....	113
3.2	N ₂ O V-T Relaxation.....	115
3.3	H ₂ O V-T Relaxation.....	117
3.4	NO ₂ V-T Relaxation.....	118
4	Chemical Reactions	119
4.1	Chemical Reactions in the System C-O	120
4.2	Chemical Reactions in the System N-C-O	128
5	Non-equilibrium Radiation	135
	References	141
Chapter 4: Ionization Phenomena behind Shock Waves		149
W.M. Huo, M. Panesi, T.E. Magin		
1	Introduction	149
2	Production, Reaction and Removal of Charged Species.....	151
2.1	Electrons	151
2.1.1	Production of Electrons.....	153

2.1.2 Reactions Involving Electrons	159
2.1.3 Electron Recombination.....	164
2.1.4 Interparticle Interactions and Free Electron Number Density	164
2.2 Ions.....	165
3 Modeling Collisional and Radiative Processes in a Weakly Ionized Plasma	165
3.1 The Collisional-Radiative Model	165
3.1.1 Transport Equations	166
3.1.2 Reaction Source Terms	168
3.1.3 Radiative Processes and Radiative Transport.....	173
3.2 Results.....	179
3.2.1 Fire II Flight Experiment	179
3.2.2 Chemistry and Flow Field Energy Distribution	180
3.2.3 Radiative Transport and Interaction between Radiation and Matter.....	182
3.2.4 Quasi-steady State Distribution.....	184
3.2.5 Comparison with Experimental Data	186
4 Conclusions	188
Acknowledgments.....	188
References	189

Chapter 5: Radiation Phenomena behind Shock Waves..... 193

M.Y. Perrin, Ph. Rivi  re, A. Soufiani

1 Introduction	193
2 Radiative Mechanisms and Radiative Properties.....	195
2.1 Bound-Bound Transitions.....	195
2.1.1 General Formulation	195
2.1.2 Atomic Line Spectra	198
2.1.3 Diatomic Line Spectra.....	200
2.2 Bound-Free Transitions.....	204
2.2.1 General Formulation	204
2.2.2 Atomic Photoionization	205
2.2.3 Molecular Photodissociation	206
2.2.4 Molecular Photoionization	206
2.2.5 Photodetachment.....	207
2.3 Free-Free Transitions	207
3 Example of Application.....	208
4 Radiative Transfer Modeling.....	212
4.1 The Escape Factor Approach	213
4.2 Spectral Models.....	214
4.2.1 Statistical Narrow Band Models	214
4.2.2 Global Models.....	218
4.3 Geometrical Treatment of Radiative Transfer.....	219
4.3.1 The Discrete Ordinate Method (DOM)	220
4.3.2 Spherical Harmonics (PN) and Related Methods.....	220

4.3.3 The Tangent Slab Approximation	222
4.4 The Monte Carlo Method.....	223
5 Radiation and Flow-Field Coupling	225
6 Conclusion and Perspectives	227
References	227

Chapter 6: Structure of Shock Waves 231

A.A. Raines, F.G. Tcheremissine

1 Introduction	231
2 Methodology of Computations	233
2.1 Solution of the Boltzmann Equation for a Pure Monatomic Gas	233
2.2 Solution of the Generalized Boltzmann Equation	237
2.3 Two Levels Kinetic Model of RT Relaxation	239
2.4 Solution of the Boltzmann Equation for a Gas Mixture.....	241
2.5 Statement of the Boundary Problem and Presentation of the Computed Data	244
3 Shock Wave Structure in a Pure Monatomic Gas.....	245
3.1 Gas of Hard Sphere Molecules	245
3.2 The Lennard-Jones Gas	250
4 Shock Wave Structure in a Polyatomic Gas	253
4.1 Shock Wave Structure with Frozen Vibrational Levels	253
4.2 Shock Wave Structure with Excited Rotational and Vibrational Levels	259
5 Shock Wave Structure in a Mixture of Monatomic Gases.....	261
6 Conclusion	266
References	266

Chapter 7: Shock Waves in Hypersonic Rarefied Flows 271

V. Lago, A. Chpoun, B. Chanetz

1 Introduction	271
2 General Phenomena in Rarefied Flows	274
2.1 Flow Regime Classification	274
2.2 Shock Waves Thickness and Stand-Off Distance	275
2.2.1 Mixing Reynolds Number	275
2.2.2 Shock-Wave Stand-Off Distance Ahead of Blunt Bodies.....	276
2.2.3 Shock Wave Thickness Ahead of Blunt Bodies.....	276
2.2.4 Impact of Flat-Faced Leading-Edge Effects on Shock Stand-Off Distance and Shock Wave Thickness	277
2.2.5 Characterisation of Shock Waves in Rarefied Regime over a Flat Plate	278
2.3 Heat Flux in Rarefied Conditions.....	279
2.4 Leading Edge Flow and Viscous Interaction in Supersonic Rarefied Flow	280
2.5 Wall Pressure in Free Molecular Flow Regime	281

3 Experimental Approach.....	281
3.1 Hypersonic Rarefied Wind Tunnel	281
3.2 Shock Wave-Boundary Layer Interactions in Low Density Flow	283
3.3 Shock-Shock Interferences in Low Density	286
3.4 Pressure Measurements in Rarefied Flow Regimes	288
3.4.1 Pressure Measurements and Orifice Diameter Effects	288
3.4.2 Pitot Pressure Measurement	288
3.4.3 Static Pressure Measurement	290
3.4.4 Pressure Transducers.....	291
3.5 Heat Flux Measurements.....	291
3.6 Shock Wave Control	293
References	297

Chapter 8: High Enthalpy Non-equilibrium Shock Layer Flows: Selected Practical Applications 299

S. Karl, J. Martinez Schramm, K. Hannemann

1 Introduction	299
2 Chemical Relaxation in High Enthalpy Cylinder Shock Layer Flow	300
2.1 High Enthalpy Shock Tunnel Göttingen (HEG)	300
2.2 Phase Step Holographic Interferometry	305
2.3 CFD Code	307
2.4 Experimental Setup and Results.....	308
2.5 Summary and Conclusions.....	313
3 CFD Modeling of Radiation Phenomena in Shock Layers.....	314
3.1 Introduction, Definitions and Nomenclature	314
3.2 The Radiative Transfer Equation in Participating Media.....	316
3.3 One-Dimendional Approximations for the Solution of the Radiative Transfer Equation	317
3.3.1 The Infinite Slab Model	317
3.3.2 Infinite Cylinder	319
3.4 Approximate Solution Methods of the Radiative Transfer Equation in Three Dimensions	320
3.4.1 The Discrete Transfer Model	320
3.4.2 Solution of the Radiative Transfer Equation Using a Monte Carlo Method	321
3.4.3 Isothermal Cylinder.....	324
3.5 Huygens Entry Peak Heating Prediction	327
4 Summary and Conclusions	334
References	335
Author Index.....	337
