

CONTENTS

<i>Preface</i>	ix
<i>Future Contributions</i>	xi
<i>Foreword</i>	xv
<i>Contributors</i>	xvii
<i>Acknowledgements</i>	xix
1. Measurement Techniques and Issues	1
M. Jamal Deen and Ognian Marinov	
1. Introduction	1
2. Overview of Measurement Methods and Instrumentation	9
3. Transmission Line and S-Parameters	25
4. Millimeter-Wave Network Analyzers	48
5. Cascading of S-Parameters and Transmission/Transfer T-Parameters	53
6. Calibration and De-Embedding at mm-waves	68
References	117
2. Transmission Lines and Passive Components	119
Guennadi A. Kouzaev, M. Jamal Deen, and Natalia K. Nikolova	
1. Introduction	120
2. Silicon Integrated Circuits and Technology	120
3. Transmission Lines	123
4. Electromagnetics of Transmission Lines and Their Discontinuities	160
5. Transitions	164
6. Capacitors, Inductors, and Resistors	170
7. Resonators and Filters for Silicon Integrations of Increased Frequencies	177
8. Power Dividers And Directional Couplers for Si-Integrated Circuits	178
9. Packaging of Millimeter-Wave Components and Chips	181
10. Conclusions	208
References	209
3. Modeling and Design of High-Frequency Structures Using Artificial Neural Networks and Space Mapping	223
Mohamed H. Bakr and Mohamed H. Negm	
1. Introduction to Artificial Neural Networks	224
2. Structure of Artificial Neural Networks	225
3. Activation Functions	227

4. Aspects of Artificial Neural Network Training	228
5. Applications of Artificial Neural Networks to Modeling of on-Chip High-Frequency Devices	231
6. Introduction to Space Mapping	239
7. The Space Mapping Concept	240
8. The Parameter Extraction Step	241
9. Space Mapping Approaches	243
10. Space Mapping Optimization and Modeling	247
11. Applications of Space Mapping	249
12. Conclusions	257
References	257
4. Nanoscale FETs	261
Oana Moldovan, Antonio Lázaro, François Danneville, Rodrigo Picos, Bogdan Nae, Benjamin Iniguez, and M. Jamal Deen	
1. Types and Performances of Nanoscale MOSFETs	262
2. Small-Signal Analysis of MOSFETs at High Frequencies	277
3. HF Noise Modeling of Multiple-Gate SOI and Laterally Asymmetric Channel MOS Devices	296
4. Conclusions	337
Acknowledgments	338
References	338
5. RF MEMS Devices for Communication Systems	349
M. Daneshmand and R. R. Mansour	
1. Introduction	350
2. General Design Considerations	353
3. MEMS Redundancy Switch Matrices	360
4. RF MEMS Crossbar Switch Matrices	367
5. RF MEMS Switch Matrices with Pairwise Connection	373
6. Switch Matrices for High-Power Applications	378
7. Tunable RF MEMS Components	379
8. Discussion	385
References	386
6. Substrate-Integrated Antennas on Silicon	391
Natalia K. Nikolova, Maryam Ravan, and Reza K. Amineh	
1. Introduction	392
2. Some Antenna Fundamentals	393

3. Fabrication of Antennas on Silicon Substrates	410
4. Types of Silicon-Based Integrated Antennas	417
5. Integrated Antenna Measurements	434
6. Crosstalk and Circuit Noise	437
7. Effect of Silicon Substrate Resistivity on Antenna Transmission Gain	438
8. Applications in Wireless Personal Area Networks (WPANs)	440
9. Single-Chip Radio	442
10. Photonically Reconfigurable Antennas	443
11. Carbon Nanotube (CNT) Antennas	446
12. Vehicular Applications	450
References	451
<i>Subject Index</i>	459
<i>Contents of Volumes 151–173</i>	479
