<i>Preface</i>	vii
<i>Useful Constants and Units</i>	xv
<i>List of Symbols</i>	xvii
1. Introduction	1
1.1 Space and Time . . . . .	2
1.2 Newton's Laws . . . . .	5
1.3 The Concepts of Mass and Force . . . . .	10
1.4 External Forces . . . . .	13
1.5 Summary . . . . .	13
2. Linear Motion	17
2.1 Conservative Forces; Conservation of Energy . . . . .	17
2.2 Motion near Equilibrium; the Harmonic Oscillator . . . . .	20
2.3 Complex Representation . . . . .	24
2.4 The Law of Conservation of Energy . . . . .	25
2.5 The Damped Oscillator . . . . .	27
2.6 Oscillator under Simple Periodic Force . . . . .	30
2.7 General Periodic Force . . . . .	34
2.8 Impulsive Forces; the Green's Function Method . . . . .	37
2.9 Collision Problems . . . . .	39
2.10 Summary . . . . .	42

3. Energy and Angular Momentum	49	7. The Two-Body Problem	159
3.1 Energy; Conservative Forces	49	7.1 Centre-of-mass and Relative Co-ordinates	159
3.2 Projectiles	51	7.2 The Centre-of-mass Frame	162
3.3 Moments; Angular Momentum	53	7.3 Elastic Collisions	165
3.4 Central Forces; Conservation of Angular Momentum	55	7.4 CM and Lab Cross-sections	168
3.5 Polar Co-ordinates	57	7.5 Summary	173
3.6 The Calculus of Variations	59	8. Many-Body Systems	177
3.7 Hamilton's Principle; Lagrange's Equations	62	8.1 Momentum; Centre-of-mass Motion	177
3.8 Summary	66	8.2 Angular Momentum; Central Internal Forces	181
4. Central Conservative Forces	73	8.3 The Earth–Moon System	183
4.1 The Isotropic Harmonic Oscillator	73	8.4 Energy; Conservative Forces	188
4.2 The Conservation Laws	76	8.5 Lagrange's Equations	190
4.3 The Inverse Square Law	78	8.6 Summary	192
4.4 Orbits	84	9. Rigid Bodies	197
4.5 Scattering Cross-sections	90	9.1 Basic Principles	197
4.6 Mean Free Path	94	9.2 Rotation about an Axis	198
4.7 Rutherford Scattering	96	9.3 Perpendicular Components of Angular Momentum	203
4.8 Summary	98	9.4 Principal Axes of Inertia	205
5. Rotating Frames	105	9.5 Calculation of Moments of Inertia	208
5.1 Angular Velocity; Rate of Change of a Vector	105	9.6 Effect of a Small Force on the Axis	211
5.2 Particle in a Uniform Magnetic Field	108	9.7 Instantaneous Angular Velocity	216
5.3 Acceleration; Apparent Gravity	111	9.8 Rotation about a Principal Axis	218
5.4 Coriolis Force	114	9.9 Euler's Angles	221
5.5 Larmor Effect	120	9.10 Summary	225
5.6 Angular Momentum and the Larmor Effect	121	10. Lagrangian Mechanics	231
5.7 Summary	124	10.1 Generalized Co-ordinates; Holonomic Systems	231
6. Potential Theory	129	10.2 Lagrange's Equations	233
6.1 Gravitational and Electrostatic Potentials	129	10.3 Precession of a Symmetric Top	236
6.2 The Dipole and Quadrupole	131	10.4 Pendulum Constrained to Rotate about an Axis	238
6.3 Spherical Charge Distributions	134	10.5 Charged Particle in an Electromagnetic Field	241
6.4 Expansion of Potential at Large Distances	137	10.6 The Stretched String	244
6.5 The Shape of the Earth	140	10.7 Summary	248
6.6 The Tides	144	11. Small Oscillations and Normal Modes	253
6.7 The Field Equations	148	11.1 Orthogonal Co-ordinates	253
6.8 Summary	152		

11.2	Equations of Motion for Small Oscillations . . . . .	256	A.2	The Scalar Product . . . . .	384
11.3	Normal Modes . . . . .	258	A.3	The Vector Product . . . . .	385
11.4	Coupled Oscillators . . . . .	261	A.4	Differentiation and Integration of Vectors . . . . .	388
11.5	Oscillations of Particles on a String . . . . .	266	A.5	Gradient, Divergence and Curl . . . . .	390
11.6	Normal Modes of a Stretched String . . . . .	269	A.6	Integral Theorems . . . . .	393
11.7	Summary . . . . .	272	A.7	Electromagnetic Potentials . . . . .	397
12.	Hamiltonian Mechanics . . . . .	277	A.8	Curvilinear Co-ordinates . . . . .	398
12.1	Hamilton's Equations . . . . .	277	A.9	Tensors . . . . .	401
12.2	Conservation of Energy . . . . .	280	A.10	Eigenvalues; Diagonalization of a Symmetric Tensor . . . . .	403
12.3	Ignorable Co-ordinates . . . . .	282	Appendix B.	Conics . . . . .	409
12.4	General Motion of the Symmetric Top . . . . .	285	B.1	Cartesian Form . . . . .	409
12.5	Liouville's Theorem . . . . .	289	B.2	Polar Form . . . . .	412
12.6	Symmetries and Conservation Laws . . . . .	291	Appendix C.	Phase Plane Analysis near Critical Points . . . . .	415
12.7	Galilean Transformations . . . . .	295	C.1	Linear Systems and their Classification . . . . .	415
12.8	Summary . . . . .	300	C.2	Almost Linear Systems . . . . .	421
13.	Dynamical Systems and Their Geometry . . . . .	307	C.3	Systems of Third (and Higher) Order . . . . .	423
13.1	Phase Space and Phase Portraits . . . . .	307	Appendix D.	Discrete Dynamical Systems — Maps . . . . .	425
13.2	First-order Systems — the Phase Line ( $n = 1$ ) . . . . .	309	D.1	One-dimensional Maps . . . . .	425
13.3	Second-order Systems — the Phase Plane ( $n = 2$ ) . . . . .	312	D.2	Two-dimensional Maps . . . . .	433
13.4	Prey–Predator, Competing-species Systems and War . . . . .	318	D.3	Twist Maps and Torus Breakdown . . . . .	437
13.5	Limit Cycles . . . . .	324	<i>Answers to Problems</i> . . . . .	445	
13.6	Systems of Third (and Higher) Order . . . . .	329	<i>Bibliography</i> . . . . .	463	
13.7	Sensitivity to Initial Conditions and Predictability . . . . .	337	<i>Index</i> . . . . .	465	
13.8	Summary . . . . .	340			
14.	Order and Chaos in Hamiltonian Systems . . . . .	347			
14.1	Integrability . . . . .	347			
14.2	Surfaces of Section . . . . .	351			
14.3	Action/Angle Variables . . . . .	354			
14.4	Some Hamiltonian Systems which Exhibit Chaos . . . . .	359			
14.5	Slow Change of Parameters — Adiabatic Invariance . . . . .	369			
14.6	Near-integrable Systems . . . . .	372			
14.7	Summary . . . . .	374			
Appendix A.	Vectors . . . . .	381			
A.1	Definitions and Elementary Properties . . . . .	381
