Introduction	xv
1 Setting the Stage for 1905	1
1.1 Overview	1
1.2 Historical Background	2
1.2.1 600 BC to AD 200: The Contribution of the Early Greeks	2
1.2.2 The 1600s: The Contribution of Galileo and Newton	6
1.2.3 The 1800s: The Contribution of Maxwell and Lorentz	13
1.2.4 The Worldview in 1900	15
1.3 Albert Einstein	15
1.3.1 The Pre-College Years	15
1.3.2 The College Years	17
1.3.3 From College to 1905	19
1.4 Discussion and Comments	20
1.5 Appendices	21
1.5.1 Science Today	21
1.5.2 Newton's Law of Gravitation from Kepler's Laws	25
1.6 Notes	27
1.7 Bibliography	31
2 Radiation and the Quanta	33
2.1 Historical Background	33
2.1.1 Thermodynamics and Entropy	33
2.1.2 Blackbody Radiation	34
2.1.3 Max Planck's Derivation of the Radiation Density	38
2.2 Albert Einstein's Paper, "On a Heuristic Point of View Concerning the Production and Transformation of Light"	39
2.2.1 On a Difficulty Encountered in the Theory of "Blackbody Radiation"	40
2.2.2 On Planck's Determination of the Elementary Quanta	41
2.2.3 On the Entropy of Radiation	42
2.2.4 Limiting Law for the Entropy of Monochromatic Radiation at Low Radiation Density	43

2.2.5	Molecular-Theoretical Investigation of the Dependence of the Entropy of Gases and Dilute Solutions on the Volume	43	3.3.5	Formula for the Mean Displacement of Suspended Particles. A New Method of Determining the True Size of Atoms	76
2.2.6	Interpretation of the Expression for the Dependence of the Entropy of Monochromatic Radiation on Volume According to Boltzmann's Principle	44	3.4	Discussion and Comments	76
2.2.7	On Stokes' Rule	45	3.5	Appendices	78
2.2.8	On the Generation of Cathode Rays by Illumination of Solid Bodies	46	3.5.1	Derivation of the Expressions for u , v , and w	78
2.2.9	On the Ionization of Gases by Ultraviolet Light	47	3.5.2	Derivation of the Expression for $W =$ Energy per Unit Time Converted into Heat	85
2.3	Discussion and Comments	47	3.5.3	Derivation of the Coefficient of Viscosity of a Liquid in Which Very Many Irregularly Distributed Spheres are Suspended	90
2.4	Appendices	49	3.5.4	Determination of the Volume of a Dissolved Substance	93
2.4.1	Entropy and Irreversibility	49	3.5.5	Derivation of the Expression for Entropy	93
2.4.2	Planck's derivation of $\rho(\nu, T)$	50	3.5.6	Derivation of $B = JV^{*n}$	95
2.4.3	Wien's Expression for Entropy	51	3.5.7	Derivation of $\nu = f(x, t)$	96
2.5	Notes	52	3.5.8	Derivation of $\langle x^2 \rangle$	98
2.6	Bibliography	55	3.6	Notes	98
3	The Atom and Brownian Motion	56	3.7	Bibliography	103
3.1	Historical Background	56	4	The Special Theory of Relativity	105
3.1.1	The Atom	57	4.1	Historical Background	105
3.1.2	Brownian Motion	60	4.1.1	The Relativity of Galileo Galilei and of Isaac Newton	105
3.1.3	The Worldview in 1900	60	4.1.2	The Lorentz Transformations (from Lorentz)	108
3.2	Albert Einstein's Paper, "A New Determination of Molecular Dimensions"	62	4.2	Albert Einstein's Paper, "On the Electrodynamics of Moving Bodies"	113
3.2.1	On the Influence on the Motion of a Liquid Exercised by a Very Small Sphere Suspended in It	63	4.2.1	Definition of Simultaneity	115
3.2.2	Calculation of the Coefficient of Viscosity of a Liquid in Which Very Many Irregularly Distributed Small Spheres are Suspended	66	4.2.2	On the Relativity of Lengths and Times	116
3.2.3	On the Volume of a Dissolved Substance Whose Molecular Volume is Large Compared to that of the Solvent	67	4.2.3	Theory of Transformation of Coordinates and Time from a System at Rest to a System in Uniform Translational Motion Relative to It	118
3.2.4	On the Diffusion of an Undissociated Substance in a Liquid Solution	68	4.2.4	The Physical Meaning of the Equations Obtained Concerning Moving Rigid Bodies and Moving Clocks	120
3.2.5	Determination of the Molecular Dimensions with the Help of the Relations Obtained	69	4.2.5	The Addition Theorem of Velocities	121
3.3	Albert Einstein's Paper, "On the Movement of Small Particles Suspended in Stationary Liquids Required by the Molecular-Kinetic Theory of Heat"	70	4.2.6	Transformation of the Maxwell-Hertz Equations for Empty Space. On the Nature of the Electromotive Forces that Arise upon Motion in a Magnetic Field	122
3.3.1	On the Osmotic Pressure Attributable to Suspended Particles	71	4.2.7	Theory of Doppler's Principle and of Aberration	124
3.3.2	Osmotic Pressure from the Standpoint of the Molecular-Kinetic Theory of Heat	72	4.2.8	Transformation of the Energy of Light Rays. Theory of the Radiation Pressure Exerted on Perfect Mirrors	126
3.3.3	Theory of Diffusion of Small Suspended Spheres	73	4.2.9	Transformation of the Maxwell-Hertz Equations when Convection Currents Are Taken into Consideration	128
3.3.4	On the Random Motion of Particles Suspended in a Liquid and Their Relation to Diffusion	75	4.2.10	Dynamics of the (Slowly Accelerated) Electron	128
			4.3	Albert Einstein's Paper, "Does the Inertia of a Body Depend Upon Its Energy Content?"	129
			4.4	Discussion and Comments	131

4.5 Appendices	133	5.2.14 The Field Equations of Gravitation in the Absence of Matter	193
4.5.1 Lorentz and the Transformed Maxwell Equations	133	5.2.15 The Hamiltonian Function for the Gravitational Field. Laws of Momentum and Energy	194
4.5.2 Derivation of the Lorentz Transformation Equations	140	5.2.16 The General Form of the Field Equations of Gravitation	196
4.5.3 The Electromagnetic Field Transformations	146	5.2.17 The Laws of Conservation in the General Case	198
4.5.4 The Doppler Principle	150	5.2.18 The Laws of Momentum and Energy for Matter, as a Consequence of the Field Equations	198
4.5.5 The Electrodynamic Lorentz Force	153		
4.6 Notes	155	Part D: “Material Phenomena”	199
4.7 Bibliography	159	5.2.19 Euler’s Equations for a Frictionless Adiabatic Fluid	199
		5.2.20 Maxwell’s Electromagnetic Field Equations for Free Space	200
5 The General Theory of Relativity	161	Part E:	205
5.1 Historical Background	161	5.2.21 Newton’s Theory as a First Approximation	205
5.1.1 Lingerings Questions	161	5.2.22 The Behaviour of Rods and Clocks in the Static Gravitational Field. Bending of Light Rays. Motion of the Perihelion of a Planetary Orbit	208
5.1.2 Generalizing the Special Theory of Relativity	163	5.3 Discussion and Comments	213
5.1.3 The Equivalence of a Gravitational Field and an Accelerated Reference Frame	164	5.3.1 Verification of the General Theory of Relativity	213
5.1.4 The Timeline from 1905 to 1916	167	5.3.2 Beyond the General Theory of Relativity: Cosmology and the Unified Field Theory	216
5.2 Albert Einstein’s Paper, “The Foundation of the General Theory of Relativity”	171	5.4 Appendices	223
		5.4.1 Multiplication of Tensors	223
Part A: “Fundamental Considerations on the Postulate of Relativity”	171	5.4.2 Some Aspects of the Fundamental Tensor $g_{\mu\nu}$	224
5.2.1 Observations on the Special Theory of Relativity	171	5.4.3 The Equation of the Geodetic Line	225
5.2.2 The Need for an Extension of the Postulate of Relativity	172	5.4.4 The Formation of Tensors by Differentiation	229
5.2.3 The Space-Time Continuum. Requirement of General Covariance for the Equations Expressing General Laws of Nature	174	5.4.5 Some Cases of Special Importance	232
5.2.4 The Relation of the Four Coordinates to Measurement in Space and Time	175	5.4.6 The Riemann–Christoffel Tensor	239
		5.4.7 The Hamiltonian Function for the Gravitational Field	241
Part B: “Mathematical Aids to the Formulation of Generally Covariant Equations”	178	5.4.8 Calculation of the Bending of Starlight	249
5.2.5 Contravariant and Covariant Four-Vectors	179	5.4.9 Calculation of the Precession of the Perihelion of Mercury	249
5.2.6 Tensors of the Second and Higher Ranks	181	5.4.10 The Bending of Starlight Experiment	253
5.2.7 Multiplication of Tensors	182	5.4.11 Newton’s Bucket	254
5.2.8 Some Aspects of the Fundamental Tensor $g_{\mu\nu}$	183	5.5 Notes	255
5.2.9 The Equation of the Geodetic Line. The Motion of a Particle	186	5.6 Bibliography	262
5.2.10 The Formation of Tensors by Differentiation	187		
5.2.11 Some Cases of Special Importance	188	6 Einstein and Quantum Mechanics	265
5.2.12 The Riemann–Christoffel Tensor	191	6.1 Historical Background	265
Part C: “Theory of the Gravitational Field”	192	6.2 The Evolution of Quantum Mechanics	267
5.2.13 Equations of Motion of a Material Point in the Gravitational Field. Expression for the Field-Components of Gravitation	192	6.2.1 The Theory of Specific Heat (1906)	267
		6.2.2 The Dual Nature of Radiation (1909)	268

6.2.3 The Bohr Atom (1913)	269
6.2.4 Spontaneous and Induced Transitions (1916)	271
6.2.5 The Compton Scattering Experiment (1923)	271
6.2.6 Bose–Einstein Statistics (1924)	272
6.2.7 Einstein, de Broglie (1924), and Schrödinger (1926)	275
6.2.8 Einstein and Bohr (1927, 1930)	277
6.3 Discussion and Comments	281
6.4 Appendices	282
6.4.1 The Specific Heat of Dulong and Petit	282
6.4.2 The Commutator of P and Q	282
6.5 Notes	283
6.6 Bibliography	287
7 Epilogue	290
7.1 The Inflexible Boundary Condition	290
7.2 Notes	293
7.3 Bibliography	295
Index	297
