CHAPTER 1

ELECTROSTATICS: CHARGES AND FIELDS

1

1.1 Electric Charge

2

1.2 Conservation of Charge

4

1.3 Quantization of Charge

5

1.4 Coulomb's Law

7

1.5 Energy of a System of Charges

11

1.6 Electrical Energy in a Crystal Lattice

14

1.7 The Electric Field

15

1.8 Charge Distributions

20

1.9 Flux

21

1.10 Gauss's Law

22

1.11 Field of a Spherical Charge Distribution

25

1.12 Field of a Line Charge

26

1.13 Field of an Infinite Flat Sheet of Charge

28

1.14 The Force on a Layer of Charge

29

1.15 Energy Associated with the Electric Field

31

Problems

34

CHAPTER 2		
THE ELECTRIC POTENTIAL		41
2.1	Line Integral of the Electric Field	42
2.2	Potential Difference and the Potential Function	44
2.3	Gradient of a Scalar Function	46
2.4	Derivation of the Field from the Potential	48
2.5	Potential of a Charge Distribution	49
	Potential of Two Point Charges	49
	Potential of a Long Charged Wire	50
2.6	Uniformly Charged Disk	51
2.7	Divergence of a Vector Function	56
2.8	Gauss's Theorem and the Differential Form of Gauss's Law	58
2.9	The Divergence in Cartesian Coordinates	59
2.10	The Laplacian	63
2.11	Laplace's Equation	64
2.12	Distinguishing the Physics from the Mathematics	66
2.13	The Curl of a Vector Function	68
2.14	Stokes' Theorem	70
2.15	The Curl in Cartesian Coordinates	71
2.16	The Physical Meaning of the Curl	74
	Problems	80
CHAPTER 3		
ELECTRIC FIELDS AROUND CONDUCTORS		87
3.1	Conductors and Insulators	88
3.2	Conductors in the Electrostatic Field	89
3.3	The General Electrostatic Problem; Uniqueness Theorem	94
3.4	Some Simple Systems of Conductors	97
3.5	Capacitance and Capacitors	103
3.6	Potentials and Charges on Several Conductors	107
3.7	Energy Stored in a Capacitor	110
3.8	Other Views of the Boundary-Value Problem	111
	Problems	113
CHAPTER 4		
ELECTRIC CURRENTS		123
4.1	Electric Current and Current Density	124
4.2	Steady Currents and Charge Conservation	126
4.3	Electrical Conductivity and Ohm's Law	128
4.4	The Physics of Electrical Conduction	133
4.5	Conduction in Metals	142

4.6	Semiconductors	144
4.7	Circuits and Circuit Elements	148
4.8	Energy Dissipation in Current Flow	153
4.9	Electromotive Force and the Voltaic Cell	154
4.10	Networks with Voltage Sources	157
4.11	Variable Currents in Capacitors and Resistors	159
	Problems	161
CHAPTER 5		
THE FIELDS OF MOVING CHARGES		169
5.1	From Oersted to Einstein	170
5.2	Magnetic Forces	171
5.3	Measurement of Charge in Motion	174
5.4	Invariance of Charge	176
5.5	Electric Field Measured in Different Frames of Reference	178
5.6	Field of a Point Charge Moving with Constant Velocity	182
5.7	Field of a Charge That Starts or Stops	187
5.8	Force on a Moving Charge	190
5.9	Interaction between a Moving Charge and Other Moving Charges	193
	Problems	200
CHAPTER 6		
THE MAGNETIC FIELD		207
6.1	Definition of the Magnetic Field	208
6.2	Some Properties of the Magnetic Field	214
6.3	Vector Potential	220
6.4	Field of Any Current-Carrying Wire	223
6.5	Fields of Rings and Coils	226
6.6	Change in \mathbf{B} at a Current Sheet	231
6.7	How the Fields Transform	235
6.8	Rowland's Experiment	241
6.9	Electric Conduction in a Magnetic Field: The Hall Effect	241
	Problems	245
CHAPTER 7		
ELECTROMAGNETIC INDUCTION		255
7.1	Faraday's Discovery	256
7.2	A Conducting Rod Moving through a Uniform Magnetic Field	258

7.3	A Loop Moving through a Nonuniform Magnetic Field	262
7.4	A Stationary Loop with the Field Sources Moving	269
7.5	A Universal Law of Induction	271
7.6	Mutual Inductance	276
7.7	A Reciprocity Theorem	279
7.8	Self-inductance	281
7.9	A Circuit Containing Self-inductance	282
7.10	Energy Stored in the Magnetic Field Problems	285 286

CHAPTER 8**ALTERNATING-CURRENT CIRCUITS** 297

8.1	A Resonant Circuit	298
8.2	Alternating Current	303
8.3	Alternating-Current Networks	310
8.4	Admittance and Impedance	313
8.5	Power and Energy in Alternating-Current Circuits Problems	315 318

CHAPTER 9**MAXWELL'S EQUATIONS AND ELECTROMAGNETIC WAVES** 323

9.1	"Something Is Missing"	324
9.2	The Displacement Current	328
9.3	Maxwell's Equations	330
9.4	An Electromagnetic Wave	331
9.5	Other Waveforms; Superposition of Waves	334
9.6	Energy Transport by Electromagnetic Waves	338
9.7	How a Wave Looks in a Different Frame Problems	341 343

CHAPTER 10**ELECTRIC FIELDS IN MATTER** 347

10.1	Dielectrics	348
10.2	The Moments of a Charge Distribution	352
10.3	The Potential and Field of a Dipole	356
10.4	The Torque and the Force on a Dipole in an External Field	358
10.5	Atomic and Molecular Dipoles; Induced Dipole Moments	360
10.6	Permanent Dipole Moments	363

10.7	The Electric Field Caused by Polarized Matter	365
10.8	Another Look at the Capacitor	371
10.9	The Field of a Polarized Sphere	373
10.10	A Dielectric Sphere in a Uniform Field	378
10.11	The Field of a Charge in a Dielectric Medium, and Gauss's Law	379
10.12	A Microscopic View of the Dielectric	382
10.13	Polarization in Changing Fields	386
10.14	The Bound-Charge Current	387
10.15	An Electromagnetic Wave in a Dielectric Problems	389 391

CHAPTER 11**MAGNETIC FIELDS IN MATTER** 397

11.1	How Various Substances Respond to a Magnetic Field	398
11.2	The Absence of Magnetic "Charge"	402
11.3	The Field of a Current Loop	405
11.4	The Force on a Dipole in an External Field	411
11.5	Electric Currents in Atoms	413
11.6	Electron Spin and Magnetic Moment	418
11.7	Magnetic Susceptibility	421
11.8	The Magnetic Field Caused by Magnetized Matter	423
11.9	The Field of a Permanent Magnet	428
11.10	Free Currents, and the Field \mathbf{H}	431
11.11	Ferromagnetism Problems	437 442

Appendix A:**A Short Review of Special Relativity** 451**Appendix B:****Radiation by an Accelerated Charge** 459**Appendix C:****Superconductivity** 465**Appendix D:****Magnetic Resonance** 469**Appendix E:****Exact Relations among SI and CGS Units** 473**Index** 477
