Preface.....	xvii
Author.....	xxi
<b>Chapter 1 Introduction .....</b>	<b>1</b>
1.1 Computational materials science .....	1
1.1.1 Human beings versus matter.....	1
1.1.2 Computational materials science .....	2
1.1.2.1 Goals.....	2
1.1.2.2 Our approach.....	3
1.2 Methods in computational materials science .....	4
1.2.1 Basic procedures of computational materials science.....	4
1.2.2 Finite element analysis (FEA) .....	6
1.2.3 Monte Carlo (MC) method .....	6
1.2.4 Molecular dynamics.....	6
1.2.5 First-principles methods ( <i>ab initio</i> methods).....	6
1.2.6 Remarks .....	7
1.3 Computers .....	8
Reference .....	8
<b>Chapter 2 Molecular dynamics.....</b>	<b>9</b>
2.1 Introduction.....	9
2.1.1 Atomic model in MD.....	10
2.1.2 Classical mechanics.....	11
2.1.3 Molecular dynamics.....	12
2.2 Potentials.....	13
2.2.1 Pair potentials .....	14
2.2.2 Embedded atom method potentials.....	17
2.2.3 Tersoff potential.....	19
2.2.4 Potentials for ionic solids.....	20
2.2.5 Remarks .....	21
2.3 Solutions for Newton's equations of motion.....	22
2.3.1 <i>N</i> -atom system.....	22
2.3.2 Verlet algorithm .....	23

2.3.3	Velocity Verlet algorithm.....	24
2.3.4	Predictor–corrector algorithm.....	25
2.4	Initialization.....	26
2.4.1	Pre-setups.....	27
2.4.1.1	Potential cutoff.....	27
2.4.1.2	Periodic boundary conditions.....	29
2.4.1.3	Neighbor lists.....	30
2.4.2	Initialization.....	31
2.4.2.1	Number of atoms (system size).....	31
2.4.2.2	Initial positions and velocities.....	31
2.4.2.3	Timestep.....	31
2.4.2.4	Total simulation time.....	32
2.4.2.5	Type of ensemble.....	33
2.5	Integration Equilibration.....	34
2.5.1	Temperature and pressure control.....	35
2.5.2	Minimization in a static MD run.....	36
2.5.2.1	Steepest-descent method.....	36
2.5.2.2	Conjugate-gradients method.....	36
2.6	Data production.....	37
2.6.1	Run analysis.....	37
2.6.1.1	Conservation of energy.....	37
2.6.1.2	Confirmation of global minimum.....	37
2.6.1.3	Time averages under the ergodic hypothesis.....	38
2.6.1.4	Errors.....	38
2.6.2	Energies.....	39
2.6.3	Structural properties.....	40
2.6.3.1	Equilibrium lattice constant, cohesive energy.....	40
2.6.3.2	Bulk modulus.....	40
2.6.3.3	Thermal expansion coefficient.....	40
2.6.3.4	Radial distribution function.....	41
2.6.4	Mean-square displacement.....	42
2.6.5	Energetics, thermodynamic properties, and others.....	42
	Further reading.....	44
	References.....	44
<b>Chapter 3</b>	<b>MD exercises with XMD and LAMMPS.....</b>	<b>47</b>
3.1	Potential curve of Al.....	47
3.1.1	Input files.....	48
3.1.1.1	Run file.....	48
3.1.1.2	Potential file.....	49
3.1.2	Run.....	50
3.1.3	Results.....	50
3.1.3.1	Potential energy curve.....	51

3.2	Melting of Ni cluster.....	52
3.2.1	Run file.....	52
3.2.2	Results.....	53
3.2.2.1	Visualization with MDL ChimeSP6.....	54
3.3	Sintering of Ni nanoparticles.....	55
3.3.1	Input file.....	55
3.3.2	Results.....	57
3.4	Speed distribution of Ar gas: A computer experiment.....	58
3.4.1	Input file.....	60
3.4.2	Results.....	62
3.5	SiC deposition on Si(001).....	62
3.5.1	Input file.....	63
3.5.2	Results.....	65
3.6	Yield mechanism of Au nanowire.....	66
3.6.1	Input file.....	67
3.6.2	Results.....	68
3.6.2.1	Snapshots.....	68
3.6.3	Conclusions.....	69
3.7	Nanodroplet of water wrapped by graphene nanoribbon.....	69
3.7.1	Input files.....	70
3.7.1.1	Positions file (data.C-H2O).....	70
3.7.1.2	Input file.....	71
3.7.2	Results.....	72
3.7.3	Conclusions.....	73
	References.....	75
<b>Chapter 4</b>	<b>First-principles methods.....</b>	<b>77</b>
4.1	Quantum mechanics: The beginning.....	78
4.1.1	Niels Bohr and the quantum nature of electrons.....	79
4.1.2	De Broglie and the dual nature of electrons.....	81
4.1.3	Schrödinger and the wave equation.....	82
4.1.4	Heisenberg and the uncertain nature of electrons.....	83
4.1.5	Remarks.....	84
4.2	Schrödinger’s wave equation.....	84
4.2.1	Simplifying the problem.....	85
4.2.1.1	Forget about gravity, relativity, and time.....	85
4.2.1.2	Forget about nuclei and spin.....	86
4.2.1.3	Forget about the excited states.....	86
4.2.1.4	Use of atomic units.....	87
4.2.2	Time-independent electronic wave equation.....	87
4.2.3	Energy operator: Hamiltonian $\hat{H}$ .....	88
4.2.4	Waves and wave function.....	90
4.2.4.1	Plane wave.....	91
4.2.4.2	Standing wave.....	92

4.2.4.3	Superposition principle of waves .....	93
4.2.4.4	Indistinguishability of electrons .....	93
4.2.5	Energy $E$ .....	94
4.2.6	Solutions of Schrödinger wave equation: An electron in a well .....	94
4.2.6.1	An electron in a one-dimensional infinite well .....	94
4.2.6.2	An electron in a one-dimensional well with finite potential .....	97
4.2.6.3	Hydrogen atom .....	97
4.2.6.4	Degenerate states .....	98
4.3	Early first-principles calculations .....	98
4.3.1	$n$ -Electron problem .....	98
4.3.2	Hartree method: One-electron model .....	99
4.3.3	Hartree–Fock method .....	100
4.3.3.1	Expression for $\Psi(r)$ .....	101
4.3.3.2	Orthonormality of wave functions .....	102
4.3.3.3	Expression for $E$ .....	103
4.3.3.4	Calculation for $E$ .....	104
4.3.3.5	Variational approach to the search for the ground-state energy .....	106
4.3.3.6	Self-consistent procedure .....	106
4.3.3.7	Remarks .....	107
	Further reading .....	108
	References .....	108
<b>Chapter 5 Density functional theory .....</b>		
5.1	Introduction .....	110
5.1.1	Electron density .....	111
5.1.1.1	Electron density in DFT .....	113
5.1.2	Hohenberg–Kohn Theorems .....	113
5.1.2.1	Electron density as central player .....	114
5.1.2.2	Search for the ground-state energy .....	115
5.2	Kohn–Sham approach .....	116
5.2.1	One-electron representations .....	116
5.2.2	One-electron system replacing $n$ -electron system .....	117
5.3	Kohn–Sham equations .....	119
5.3.1	Energy terms .....	119
5.3.1.1	Kinetic energy .....	119
5.3.1.2	External energy .....	120
5.3.1.3	Hartree energy .....	121
5.3.1.4	Exchange–correlation energy .....	121
5.3.1.5	Magnitudes of each energy term .....	122
5.3.2	Functional derivatives .....	123

5.3.3	Kohn–Sham equations .....	125
5.3.3.1	KS orbitals .....	127
5.3.3.2	KS eigenvalues .....	128
5.4	Exchange–correlation functionals .....	128
5.4.1	Exchange–correlation hole .....	129
5.4.1.1	Exchange hole .....	129
5.4.1.2	Correlation hole .....	130
5.4.1.3	Exchange–correlation hole .....	130
5.4.2	Local density approximation .....	132
5.4.2.1	Homogeneous electron gas .....	132
5.4.2.2	Exchange energy .....	133
5.4.2.3	Correlation energy .....	133
5.4.2.4	XC energy .....	133
5.4.2.5	Remarks .....	134
5.4.3	Generalized gradient approximation .....	135
5.4.3.1	PW91 .....	137
5.4.3.2	PBE .....	137
5.4.4	Other XC functionals .....	138
5.4.5	Remarks .....	139
5.4.5.1	General trends of GGA .....	139
5.4.5.2	Limitations of GGA: Strongly correlated systems .....	140
5.4.5.3	Limitations of GGA: Band gap underestimation .....	140
5.5	Solving Kohn–Sham equations .....	141
5.5.1	Introduction .....	141
5.5.1.1	Self-consistency .....	141
5.5.1.2	Variational principle .....	142
5.5.1.3	Constraints .....	142
5.5.2	Direct diagonalization .....	143
5.5.3	Iterative diagonalization .....	143
5.5.3.1	Total energy and other properties .....	144
5.6	DFT extensions and limitations .....	145
5.6.1	DFT extensions .....	145
5.6.1.1	Spin-polarized DFT .....	146
5.6.1.2	DFT with fractional occupancies .....	146
5.6.1.3	DFT for excited states .....	146
5.6.1.4	Finite-temperature DFT .....	147
5.6.1.5	Time-dependent DFT .....	147
5.6.1.6	Linear scaling of DFT .....	148
5.6.2	DFT limitations .....	148
	Further reading .....	150
	References .....	150

<b>Chapter 6 Treating solids</b> .....	<b>153</b>
6.1 Pseudopotential approach.....	154
6.1.1 Freezing the core electrons.....	155
6.1.1.1 Core electrons.....	155
6.1.1.2 Valence electrons.....	155
6.1.1.3 Frozen-core approximation.....	156
6.1.2 Pseudizing the valence electrons.....	156
6.1.2.1 Pseudizing procedure.....	157
6.1.2.2 Benefits.....	158
6.1.3 Various pseudopotentials.....	159
6.1.3.1 Norm-conserving PPs.....	159
6.1.3.2 Ultrasoft PPs.....	159
6.1.3.3 PAW potentials.....	160
6.2 Reducing the calculation size.....	161
6.2.1 Supercell approach under periodic boundary conditions.....	162
6.2.2 First Brillouin zone and irreducible Brillouin zone.....	163
6.2.2.1 Reciprocal lattice.....	163
6.2.2.2 The first Brillouin zone.....	165
6.2.2.3 Irreducible Brillouin zone.....	167
6.2.3 <i>k</i> -points.....	168
6.2.3.1 <i>k</i> -Point sampling.....	168
6.2.3.2 Monkhorst-Pack method.....	168
6.2.3.3 $\Gamma$ -Point.....	169
6.3 Bloch theorem.....	169
6.3.1 Electrons in solid.....	169
6.3.2 Bloch expression with periodic function.....	170
6.3.3 Bloch expression with Fourier expansions.....	172
6.3.3.1 Fourier expansions.....	172
6.3.3.2 Fast Fourier transformation.....	172
6.3.3.3 Matrix expression for the KS equations.....	173
6.4 Plane-wave expansions.....	174
6.4.1 Basis set.....	175
6.4.1.1 Local basis set.....	175
6.4.1.2 Plane-wave basis set.....	175
6.4.2 Plane-wave expansions for KS quantities.....	176
6.4.2.1 Charge density.....	176
6.4.2.2 Kinetic energy.....	177
6.4.2.3 Effective potential.....	178
6.4.2.4 KS equations.....	178
6.4.3 KS orbitals and bands.....	179
6.4.3.1 Band structure of free electron.....	180
6.4.3.2 Band structure of electrons in solids.....	180
6.4.3.3 Density of states.....	182

6.5 Some practical topics.....	183
6.5.1 Energy cutoff.....	183
6.5.1.1 Cutoff energy.....	183
6.5.2 Smearing.....	184
6.5.2.1 Gaussian smearing.....	185
6.5.2.2 Fermi smearing.....	185
6.5.2.3 Methfessel-Paxton smearing.....	185
6.5.2.4 Tetrahedron method with Blöchl corrections.....	186
6.6 Practical algorithms for DFT runs.....	186
6.6.1 Electronic minimizations.....	186
6.6.1.1 Direct diagonalization.....	186
6.6.1.2 Iterative Davidson method.....	187
6.6.1.3 RMM-DIIS method.....	187
6.6.2 Ionic minimizations.....	189
6.6.2.1 Hellmann-Feynman forces.....	189
6.6.2.2 Minimization methods.....	190
6.6.3 Born-Oppenheimer molecular dynamics.....	190
6.6.4 Car-Parrinello molecular dynamics.....	191
6.6.4.1 CPMD for electronic minimization.....	191
6.6.4.2 CPMD for ionic minimization.....	192
6.6.5 Multiscale methods.....	193
6.6.5.1 Crack propagation in silicon.....	193
Further reading.....	194
References.....	194
<b>Chapter 7 DFT exercises with VASP</b> .....	<b>197</b>
7.1 VASP.....	198
7.1.1 General features.....	199
7.1.2 Flow of VASP.....	199
7.1.2.1 Ten things you should not do in a VASP run.....	200
7.2 Pt-atom.....	201
7.2.1 Input files.....	201
7.2.1.1 INCAR.....	201
7.2.1.2 KPOINTS.....	202
7.2.1.3 POSCAR.....	202
7.2.1.4 POTCAR.....	203
7.2.2 Run.....	203
7.2.3 Results.....	204
7.2.3.1 OSZICAR.....	204
7.2.3.2 OUTCAR.....	205
7.2.3.3 Continuous run.....	205

7.3	Pt-FCC.....	206
7.3.1	Input files.....	206
7.3.1.1	INCAR.....	206
7.3.1.2	KPOINTS.....	207
7.3.1.3	POSCAR.....	208
7.3.2	Run.....	208
7.3.2.1	Run.vasp.....	208
7.3.2.2	Nohup.out.....	209
7.3.3	Results.....	210
7.3.3.1	CONTCAR.....	210
7.3.3.2	OUTCAR.....	210
7.4	Convergence tests.....	211
7.4.1	ENCUT convergence.....	211
7.4.1.1	Shell script run.lattice.....	211
7.4.1.2	Run.....	212
7.4.1.3	Results.....	213
7.4.2	KPOINTS convergence.....	214
7.5	Pt-bulk.....	215
7.5.1	Cohesive energy of solid Pt.....	215
7.5.1.1	Cohesive energy.....	217
7.5.2	Vacancy formation energy of Pt.....	218
7.5.2.1	Vacancy formation energy.....	218
7.5.2.2	CHGCAR plot.....	219
7.6	Pt(111)-surface.....	220
7.6.1	Pt(111)-slab.....	221
7.6.1.1	INCAR.....	221
7.6.1.2	KPOINTS.....	221
7.6.1.3	POSCAR.....	222
7.6.1.4	Results.....	223
7.6.2	Adsorption energy.....	225
7.6.2.1	POSCAR.....	225
7.6.2.2	POTCAR.....	226
7.6.2.3	Results.....	226
7.6.3	Work function and dipole correction.....	227
7.6.3.1	Work function.....	228
7.6.3.2	Results.....	228
7.7	Nudged elastic band method.....	229
7.7.1	Principle of NEB method.....	230
7.7.2	Procedure of NEB method.....	231
7.7.2.1	Initial and final states.....	231
7.7.2.2	Initial band.....	231
7.7.2.3	Nudging the band.....	231

7.7.2.4	Force calculation.....	231
7.7.2.5	NEB method with climb.....	232
7.7.3	Pt(111)-O-NEB.....	232
7.7.3.1	Pt(111)-slab-O-HCP.....	232
7.7.3.2	Run NEB with VTST scripts.....	233
7.7.3.3	Results.....	235
7.8	Pt(111)-catalyst.....	236
7.8.1	Catalyst.....	236
7.8.2	Density of states.....	237
7.8.3	Pt(111)-slab-O-DOS.....	237
7.8.3.1	Static run.....	237
7.8.3.2	DOS run.....	238
7.8.3.3	Results.....	238
7.9	Band structure of silicon.....	239
7.9.1	Static run for Si.....	239
7.9.2	Run for band structure of Si.....	241
7.9.2.1	INCAR.....	241
7.9.2.2	KPOINTS.....	242
7.9.2.3	EIGENVAL.....	243
7.10	Phonon calculation for silicon.....	244
7.10.1	Input files.....	245
7.10.2	Phonon calculations.....	246
7.10.2.1	INPHON.....	246
	References.....	249
	Appendix 1: List of symbols and abbreviations.....	251
	Appendix 2: LINUX basic commands.....	255
	Appendix 3: Convenient scripts.....	257
	Appendix 4: The Greek alphabet.....	265
	Appendix 5: SI prefixes.....	267
	Appendix 6: Atomic units.....	269
	Index.....	271
