

Contents

Chapter 1	THE EINSTEIN SUMMATION CONVENTION	1
	1.1 Introduction	1
	1.2 Repeated Indices in Sums	1
	1.3 Double Sums	2
	1.4 Substitutions	2
	1.5 Kronecker Delta and Algebraic Manipulations	3
<hr/>		
Chapter 2	BASIC LINEAR ALGEBRA FOR TENSORS	8
	2.1 Introduction	8
	2.2 Tensor Notation for Matrices, Vectors, and Determinants	8
	2.3 Inverting a Matrix	10
	2.4 Matrix Expressions for Linear Systems and Quadratic Forms	10
	2.5 Linear Transformations	11
	2.6 General Coordinate Transformations	12
	2.7 The Chain Rule for Partial Derivatives	13
<hr/>		
Chapter 3	GENERAL TENSORS	23
	3.1 Coordinate Transformations	23
	3.2 First-Order Tensors	26
	3.3 Invariants	28
	3.4 Higher-Order Tensors	29
	3.5 The Stress Tensor	29
	3.6 Cartesian Tensors	31
<hr/>		
Chapter 4	TENSOR OPERATIONS: TESTS FOR TENSOR CHARACTER	43
	4.1 Fundamental Operations	43
	4.2 Tests for Tensor Character	45
	4.3 Tensor Equations	45
<hr/>		
Chapter 5	THE METRIC TENSOR	51
	5.1 Introduction	51
	5.2 Arc Length in Euclidean Space	51
	5.3 Generalized Metrics; The Metric Tensor	52
	5.4 Conjugate Metric Tensor; Raising and Lowering Indices	55
	5.5 Generalized Inner-Product Spaces	55
	5.6 Concepts of Length and Angle	56

Chapter 6	THE DERIVATIVE OF A TENSOR	68
	6.1 Inadequacy of Ordinary Differentiation	68
	6.2 Christoffel Symbols of the First Kind	68
	6.3 Christoffel Symbols of the Second Kind	70
	6.4 Covariant Differentiation	71
	6.5 Absolute Differentiation along a Curve	72
	6.6 Rules for Tensor Differentiation	74
<hr/>		
Chapter 7	RIEMANNIAN GEOMETRY OF CURVES	83
	7.1 Introduction	83
	7.2 Length and Angle under an Indefinite Metric	83
	7.3 Null Curves	84
	7.4 Regular Curves: Unit Tangent Vector	85
	7.5 Regular Curves: Unit Principal Normal and Curvature	86
	7.6 Geodesics as Shortest Arcs	88
<hr/>		
Chapter 8	RIEMANNIAN CURVATURE	101
	8.1 The Riemann Tensor	101
	8.2 Properties of the Riemann Tensor	101
	8.3 Riemannian Curvature	103
	8.4 The Ricci Tensor	105
<hr/>		
Chapter 9	SPACES OF CONSTANT CURVATURE; NORMAL COORDINATES	114
	9.1 Zero Curvature and the Euclidean Metric	114
	9.2 Flat Riemannian Spaces	116
	9.3 Normal Coordinates	117
	9.4 Schur's Theorem	119
	9.5 The Einstein Tensor	119
<hr/>		
Chapter 10	TENSORS IN EUCLIDEAN GEOMETRY	127
	10.1 Introduction	127
	10.2 Curve Theory; The Moving Frame	127
	10.3 Curvature and Torsion	130
	10.4 Regular Surfaces	130
	10.5 Parametric Lines; Tangent Space	132
	10.6 First Fundamental Form	133
	10.7 Geodesics on a Surface	135
	10.8 Second Fundamental Form	136
	10.9 Structure Formulas for Surfaces	137
	10.10 Isometries	138

Chapter 11	TENSORS IN CLASSICAL MECHANICS	154
	11.1 Introduction	154
	11.2 Particle Kinematics in Rectangular Coordinates	154
	11.3 Particle Kinematics in Curvilinear Coordinates	155
	11.4 Newton's Second Law in Curvilinear Coordinates	156
	11.5 Divergence, Laplacian, Curl	157
<hr/>		
Chapter 12	TENSORS IN SPECIAL RELATIVITY	164
	12.1 Introduction	164
	12.2 Event Space	164
	12.3 The Lorentz Group and the Metric of SR	166
	12.4 Simple Lorentz Matrices	167
	12.5 Physical Implications of the Simple Lorentz Transformation	169
	12.6 Relativistic Kinematics	169
	12.7 Relativistic Mass, Force, and Energy	171
	12.8 Maxwell's Equations in SR	172
<hr/>		
Chapter 13	Tensor Fields on Manifolds	189
	13.1 Introduction	189
	13.2 Abstract Vector Spaces and the Group Concept	189
	13.3 Important Concepts for Vector Spaces	190
	13.4 The Algebraic Dual of a Vector Space	191
	13.5 Tensors on Vector Spaces	193
	13.6 Theory of Manifolds	194
	13.7 Tangent Space; Vector Fields on Manifolds	197
	13.8 Tensor Fields on Manifolds	199
<hr/>		
	ANSWERS TO SUPPLEMENTARY PROBLEMS	213
	INDEX	223
