<i>Preface</i>	<i>page xiii</i>
<i>Review of background topics</i>	<i>xvi</i>

1	Matrices and vector spaces	1
1.1	Vector spaces	2
1.2	Linear operators	5
1.3	Matrices	7
1.4	Basic matrix algebra	8
1.5	Functions of matrices	13
1.6	The transpose of a matrix	13
1.7	The complex and Hermitian conjugates of a matrix	14
1.8	The trace of a matrix	16
1.9	The determinant of a matrix	17
1.10	The inverse of a matrix	21
1.11	The rank of a matrix	25
1.12	Simultaneous linear equations	27
1.13	Special types of square matrix	36
1.14	Eigenvectors and eigenvalues	40
1.15	Determination of eigenvalues and eigenvectors	45
1.16	Change of basis and similarity transformations	49
1.17	Diagonalization of matrices	51
1.18	Quadratic and Hermitian forms	53
1.19	Normal modes	58
1.20	The summation convention	67
	Summary	68
	Problems	72
	Hints and answers	83
2	Vector calculus	87
2.1	Differentiation of vectors	87
2.2	Integration of vectors	92
2.3	Vector functions of several arguments	93
2.4	Surfaces	94
2.5	Scalar and vector fields	96

2.6	Vector operators	96	Problems	219
2.7	Vector operator formulae	103	Hints and answers	226
2.8	Cylindrical and spherical polar coordinates	107		
2.9	General curvilinear coordinates	113		
	Summary	119		
	Problems	121		
	Hints and answers	126		
3	Line, surface and volume integrals	128	6	Higher-order ordinary differential equations
3.1	Line integrals	128	6.1	General considerations
3.2	Connectivity of regions	134	6.2	Linear equations with constant coefficients
3.3	Green's theorem in a plane	135	6.3	Linear recurrence relations
3.4	Conservative fields and potentials	138	6.4	Laplace transform method
3.5	Surface integrals	141	6.5	Linear equations with variable coefficients
3.6	Volume integrals	147	6.6	General ordinary differential equations
3.7	Integral forms for grad, div and curl	149		Summary
3.8	Divergence theorem and related theorems	153		Problems
3.9	Stokes' theorem and related theorems	158		Hints and answers
	Summary	161	7	Series solutions of ordinary differential equations
	Problems	163	7.1	Second-order linear ordinary differential equations
	Hints and answers	168	7.2	Ordinary and singular points of an ODE
4	Fourier series	170	7.3	Series solutions about an ordinary point
4.1	The Dirichlet conditions	170	7.4	Series solutions about a regular singular point
4.2	The Fourier coefficients	172	7.5	Obtaining a second solution
4.3	Symmetry considerations	174	7.6	Polynomial solutions
4.4	Discontinuous functions	175		Summary
4.5	Non-periodic functions	176		Problems
4.6	Integration and differentiation	179		Hints and answers
4.7	Complex Fourier series	180	8	Eigenfunction methods for differential equations
4.8	Parseval's theorem	181	8.1	Sets of functions
	Summary	183	8.2	Adjoint, self-adjoint and Hermitian operators
	Problems	185	8.3	Properties of Hermitian operators
	Hints and answers	189	8.4	Sturm–Liouville equations
5	Integral transforms	191	8.5	Superposition of eigenfunctions: Green's functions
5.1	Fourier transforms	191		Summary
5.2	The Dirac δ -function	197		Problems
5.3	Properties of Fourier transforms	202		Hints and answers
5.4	Laplace transforms	210	9	Special functions
5.5	Concluding remarks	217	9.1	Legendre functions
	Summary	218	9.2	Associated Legendre functions
			9.3	Spherical harmonics
			9.4	Chebyshev functions

9.5	Bessel functions	347	Problems	509
9.6	Spherical Bessel functions	360	Hints and answers	514
9.7	Laguerre functions	361		
9.8	Associated Laguerre functions	366		
9.9	Hermite functions	369		
9.10	The gamma function and related functions	373		
	Summary	377		
	Problems	380		
	Hints and answers	385		
10	Partial differential equations	387	13	Integral equations
10.1	Important partial differential equations	387	13.1	Obtaining an integral equation from a differential equation
10.2	General form of solution	392		516
10.3	General and particular solutions	393	13.2	Types of integral equation
10.4	The wave equation	405		517
10.5	The diffusion equation	408	13.3	Operator notation and the existence of solutions
10.6	Boundary conditions and the uniqueness of solutions	411		518
	Summary	413	13.4	Closed-form solutions
	Problems	414		519
	Hints and answers	419	13.5	Neumann series
				526
11	Solution methods for PDEs	421	13.6	Fredholm theory
11.1	Separation of variables: the general method	421		528
11.2	Superposition of separated solutions	425	13.7	Schmidt–Hilbert theory
11.3	Separation of variables in polar coordinates	433		529
11.4	Integral transform methods	455		Summary
11.5	Inhomogeneous problems – Green’s functions	460		532
	Summary	476		Problems
	Problems	479		534
	Hints and answers	486		Hints and answers
				538
12	Calculus of variations	488	14	Complex variables
12.1	The Euler–Lagrange equation	489		540
12.2	Special cases	490	14.1	Functions of a complex variable
12.3	Some extensions	494		541
12.4	Constrained variation	496	14.2	The Cauchy–Riemann relations
12.5	Physical variational principles	498		543
12.6	General eigenvalue problems	501	14.3	Power series in a complex variable
12.7	Estimation of eigenvalues and eigenfunctions	503		547
12.8	Adjustment of parameters	506	14.4	Some elementary functions
	Summary	507		549
			14.5	Multivalued functions and branch cuts
				551
			14.6	Singularities and zeros of complex functions
				553
			14.7	Conformal transformations
				556
			14.8	Complex integrals
				559
			14.9	Cauchy’s theorem
				563
			14.10	Cauchy’s integral formula
				566
			14.11	Taylor and Laurent series
				568
			14.12	Residue theorem
				573
				Summary
				576
				Problems
				578
				Hints and answers
				580
			15	Applications of complex variables
				582
			15.1	Complex potentials
				582
			15.2	Applications of conformal transformations
				587
			15.3	Definite integrals using contour integration
				590
			15.4	Summation of series
				597
			15.5	Inverse Laplace transform
				599
			15.6	Some more advanced applications
				602
				Summary
				605

Problems	606
Hints and answers	610
16 Probability	612
16.1 Venn diagrams	612
16.2 Probability	617
16.3 Permutations and combinations	627
16.4 Random variables and distributions	633
16.5 Properties of distributions	638
16.6 Functions of random variables	642
16.7 Generating functions	646
16.8 Important discrete distributions	654
16.9 Important continuous distributions	666
16.10 The central limit theorem	681
16.11 Joint distributions	683
16.12 Properties of joint distributions	685
Summary	691
Problems	695
Hints and answers	703
17 Statistics	705
17.1 Experiments, samples and populations	705
17.2 Sample statistics	706
17.3 Estimators and sampling distributions	713
17.4 Some basic estimators	721
17.5 Data modeling	730
17.6 Hypothesis testing	735
Summary	755
Problems	759
Hints and answers	764
A Review of background topics	766
A.1 Arithmetic and geometry	766
A.2 Preliminary algebra	768
A.3 Differential calculus	770
A.4 Integral calculus	771
A.5 Complex numbers and hyperbolic functions	773
A.6 Series and limits	774
A.7 Partial differentiation	777
A.8 Multiple integrals	778
A.9 Vector algebra	779
A.10 First-order ordinary differential equations	781

B Inner products	782
C Inequalities in linear vector spaces	784
D Summation convention	786
E The Kronecker delta and Levi–Civita symbols	789
F Gram–Schmidt orthogonalization	793
G Linear least squares	795
H Footnote answers	797
<i>Index</i>	810
