

CONTENTS

Preface	xv
Author	xvii
1 Introduction	1
1.1 Historical Background	1
1.2 Unifying Themes	2
1.3 Overview of Nonlinear Effects Covered in this Book	3
1.4 Labeling Conventions and Terminology	6
1.5 Units	7
References	7
2 Linear Optics	10
2.1 Introduction	10
2.1.1 Linearity	10
2.1.2 Maxwell's Equations	10
2.1.3 Poynting's Theorem	11
2.1.4 Intensity	13
2.1.5 Linear Polarization	14
2.1.6 Complex Representation of Polarization	15
2.1.7 Energy Exchange between a Field and Polarization	16
2.2 Tensor Properties of Materials	17
2.2.1 Tensors	17
2.3 Wave Equation	19
2.3.1 Constitutive Relationships for Complex Amplitudes	20
2.3.2 Wave Equation in Homogeneous Isotropic Materials	20
2.3.3 Dispersion	22
2.3.4 Wave Equation in Crystals	23
2.3.5 Fresnel's Equation	25
2.3.6 o- and e-Waves	26
2.3.7 Poynting Vector Walk-Off	27
2.4 Determining e-Waves and o-Waves in Crystals	29
2.4.1 Homogeneous Isotropic	29
2.4.2 Uniaxial Crystal	29
2.4.3 Biaxial Crystals	30
2.5 Index Ellipsoid	31

2.6	Applications	32	4.2	Birefringent Phase Matching	94
2.6.1	Gaussian Beams	32	4.2.1	Birefringent Phase-Matching Types	94
2.6.2	Gaussian Beam Propagation Using the q -Parameter	33	4.2.2	Example: Phase-Matching Problem	97
2.6.3	M^2 Propagation Factor	36	4.2.3	Phase-Matching SHG	99
2.6.4	Example of Formatting a Beam for SHG	37	4.3	Tuning Curves and Phase-Matching Tolerances	99
	Problems	39	4.3.1	Phase-Matching Bandwidth and Angular Acceptance	101
	References	44	4.4	Taylor Series Expansion Techniques for Determining Bandwidth	104
	Further Reading	44	4.4.1	Temperature Bandwidth	105
3	Introduction to the Nonlinear Susceptibility	45	4.4.2	Phase-Matching Bandwidth and Acceptance Bandwidth	106
3.1	Introduction	45	4.4.3	Angular Acceptance and Noncritical Phase Matching	107
3.1.1	Nonlinear Polarization	45	4.5	Noncollinear Phase Matching	108
3.1.2	Parametric Processes	46		Problems	111
3.2	Classical Origin of the Nonlinearity	49		Reference	116
3.2.1	One-Dimensional Linear Harmonic Oscillator	49		Further Reading	116
3.2.2	Anharmonic Oscillator	50	5	Quasi-Phase Matching	118
3.2.3	Third-Order Effects in Centrosymmetric Media	53	5.1	Introduction to Quasi-Phase Matching	118
3.3	Details of the Nonlinear Susceptibility, $\chi^{(2)}$	54	5.2	Linear and Nonlinear Material Considerations	118
3.3.1	Degeneracy and Subtleties of Squaring the Field	55	5.3	QPM with Periodic Structures	120
3.3.2	Tensor Properties of Susceptibility	55	5.4	QPM Calculation: An Example	123
3.3.3	Permuting the Electric Fields in the Nonlinear Polarization	56	5.5	Fourier Transform Treatment of QPM	123
3.3.4	Full Permutation Symmetry in Lossless Media	56	5.6	Tolerances	126
3.3.5	Kleinman's Symmetry	57	5.7	Fabricating Quasi-Phase-Matched Structures	128
3.3.6	Contracting the Indices in $\chi_{ijk}^{(2)}$	57		Problems	130
3.3.7	Effective Nonlinearity and d_{eff}	61		Reference	133
3.3.8	Example Calculation of d_{eff}	61		Further Reading	134
3.4	Connection Between Crystal Symmetry and the d -Matrix	66	6	Three-Wave Mixing beyond the Small-Signal Limit	135
3.4.1	Centrosymmetric Crystals	67	6.1	Introduction	135
3.4.2	Example Calculation of d -Matrix for 3m Crystals	68	6.2	DFG with a Single Strong Pump	135
3.5	Electro-Optic Effect	70	6.2.1	Defining Equations for the Undepleted Pump Approximation	135
3.5.1	EO Effects and the r -Matrix	71	6.2.2	Solution for Difference-Frequency Output	136
3.5.2	Example Calculation of EO Effect in KDP	72	6.2.3	Solution with Specific Boundary Conditions	137
3.5.3	EO Wave Plates	74	6.3	DFG with Strong Pump and Loss	139
3.5.4	EO Sampling: Terahertz Detection	74	6.4	Solutions for All Three Coupled Amplitude Equations	142
3.5.5	Connection between d and r	78	6.4.1	Manley-Rowe Relations	142
	Problems	80	6.4.2	Analytic Solution for Three Plane Waves	144
	References	84	6.5	Spontaneous Parametric Scattering (Optical Parametric Generation)	146
	Further Reading	85		Problems	150
4	Three-Wave Processes in the Small-Signal Regime	86		References	151
4.1	Introduction to the Wave Equation for Three Fields	86		Further Reading	152
4.1.1	Wave Equation for a Three-Wave Process	86	7	$\chi^{(2)}$ Devices	153
4.1.2	Slowly Varying Envelope Approximation	88	7.1	Introduction	153
4.1.3	Introduction to Phase Matching	90	7.2	Optimizing Device Performance: Focusing	153
4.1.4	First Solution to the Coupled Amplitude Equations	91	7.2.1	Overlap of Gaussian Beams with Nonlinear Polarization	154
4.1.5	k -Vector Picture	94			

	7.2.2	Parametric Interactions with Focused Gaussian Beams	155				
	7.2.3	Optimizing Gaussian Beam Interactions	157				
	7.3	Resonator Devices	159				
	7.3.1	Resonant SHG	159				
	7.3.2	Optical Parametric Oscillator	160				
	7.3.3	OPO with Gaussian Beams	164				
	7.3.4	Doubly Resonant OPOs	165				
	7.3.5	Singly Resonant OPO	168				
	7.3.6	Cavity Design	169				
	7.3.7	Pulsed OPOs	171				
	7.3.8	Backward-Optical Parametric Oscillator	173				
	Problems		175				
	References		177				
	Further Reading		178				
8	$\chi^{(3)}$	Processes	179				
	8.1	Introduction	179				
	8.2	Nonlinear Polarization for $\chi^{(3)}$ Processes	179				
	8.2.1	Defining Relationships	179				
	8.2.2	Permutation Symmetries for $\chi^{(3)}$	182				
	8.2.3	Symmetry Considerations for Centrosymmetric Media	182				
	8.3	Wave Equation for $\chi^{(3)}$ Interactions	184				
	8.3.1	Four Distinct Frequencies	184				
	8.3.2	Manley–Rowe Relations	186				
	8.4	Self-Induced Effects	187				
	8.4.1	Nonlinear Index of Refraction	187				
	8.4.2	Nonlinear Absorption	189				
	8.4.3	Cross-Phase Shifts	190				
	8.4.4	Self-Focusing	190				
	8.4.5	Optical Bistability	192				
	8.5	Parametric Amplifiers	195				
	8.5.1	Introduction	195				
	8.5.2	Two Undepleted Inputs	196				
	8.5.3	One Undepleted Input	198				
	8.5.4	Pump Depletion	199				
	8.6	Noncollinear Processes	200				
	8.7	Degenerate Four-Wave Mixing	201				
	8.7.1	Introduction	201				
	8.7.2	Pump Phase Shifts	202				
	8.7.3	Probe and Signal Fields	203				
	8.7.4	Optical Phase Conjugation	205				
	8.8	Z-Scan	206				
	8.8.1	Introduction	206				
	8.8.2	Measuring the Nonlinear Index of Refraction	207				
	8.8.3	Nonlinear Absorption	211				
	Problems		213				
	Reference		216				
	Further Reading		216				
				9	Raman and Brillouin Scattering		217
				9.1	Introduction		217
				9.2	Spontaneous Raman Scattering		217
				9.2.1	Classical Model of Spontaneous Raman Scattering		218
				9.2.2	Raman Scattering Cross Section		219
				9.2.3	Raman Microscope		222
				9.3	Stimulated Raman Scattering		223
				9.3.1	Introduction		223
				9.3.2	Classical Calculation for Inducing a Molecular Vibration		223
				9.3.3	Nonlinear Polarization for a Stimulated Raman Process		225
				9.3.4	Wave Equation for Stokes Field		227
				9.3.5	Amplification of Stokes Field Off Resonance		228
				9.3.6	Stokes Amplification with a Depleted Pump		228
				9.4	Anti-Stokes Generation		231
				9.4.1	Classical Derivation of the Anti-Stokes Nonlinear Polarization		231
				9.4.2	Wave Equation for Stokes and Anti-Stokes in the Undepleted Pump Approximation		234
				9.4.3	Stokes and Anti-Stokes Generation with Pump Depletion		235
				9.5	Raman Amplifiers		237
				9.6	Photoacoustic Effects: Raman–Nath Diffraction		238
				9.7	Brillouin Scattering		241
				9.7.1	Spontaneous Brillouin Scattering		241
				9.7.2	Classical Model for Stimulated Brillouin Scattering		242
				9.7.3	Nonlinear Polarization for Stimulated Brillouin Scattering		244
				9.7.4	Coupled Intensity Equations and Solutions for Stimulated Brillouin Scattering		245
				9.7.5	Brillouin with Linear Absorption		247
				9.7.6	Mitigating Brillouin Effects		248
				Problems			249
				References			251
				10	Nonlinear Optics Including Diffraction and Dispersion		252
				10.1	Introduction		252
				10.2	Spatial Effects		252
				10.2.1	Diffraction and Poynting Vector Walk-Off		253
				10.2.2	Split-Step Technique		255
				10.2.3	Linear Propagation: Beam Propagation Method		257
				10.2.4	Nonlinear Propagation for Three-Wave Mixing		259
				10.3	Temporal Effects		260
				10.3.1	Time-Dependent Field Definitions		260
				10.3.2	Time-Dependent Linear Polarization		261
				10.3.3	Time-Dependent Nonlinear Polarization		263
				10.3.4	Wave Equation for Fields with a Time-Dependent Envelope		264
				10.4	Solutions to the Nonlinear Envelope Equation		267
				10.4.1	Self-Phase Modulation		267
				10.4.2	Numerical Solutions with Pulses		269
				10.4.2.1	Dispersion Step		270
				10.4.2.2	Nonlinear Step		271

10.4.3 Nonlinear Schrodinger Equation	272
10.4.4 Spatial Solitons	274
Problems	275
References	276
 Appendix A Complex Notation	 277
A.1 Rectangular Form	277
A.2 Euler's Formula	278
A.3 Polar Form	279
A.4 Complex Amplitudes	279
 Appendix B Sellmeier Equations	 280
B.1 β -BaB ₂ O ₄ , BBO	280
B.2 LiTaO ₃ , Lithium Tantalate (Congruent)	280
B.3 LiNbO ₃ , Lithium Niobate (Congruent)	281
B.4 LiB ₃ O ₅ Lithium Triborate (LBO)	281
B.5 KTiOPO ₄ , KTP	282
B.6 Zinc Germanium Phosphide (ZGP)	282
B.7 Gallium Arsenide (GaAs)	282
B.8 Schott Glass SF10	283
B.9 Fused Silica	283
References	283
 Appendix C Programming Techniques	 285
C.1 Programming Δk	285
C.2 Root Finding by Bisection	286
C.3 Runge-Kutta Approach to Integrating Coupled Differential Equations	287
Further Reading	288
 Appendix D Exact Solutions to the Coupled Amplitude Equations	 289
Reference	294
 Index	 295
