
Contents

1	What's Going On Here?	1
1.1	What Is Physics?	1
1.2	What Is Introductory Physics About?	3
1.3	What We're Up To	4
1.4	This Course Tells a Story	5
	The Short Story of the Atom	5
	Special Relativity and Quantum Mechanics	7
	Physics Is Not a Spectator Sport	7
1.5	Why This Story?	9
	An Important Idea	9
	Tools for Quantitative Thought	10
	An Introduction to Physics	10
1.6	Just Do It!	10
2	Some Physics You Need to Know	13
2.1	Introduction	13
2.2	Length, Mass, Time: Fundamental Physical Properties	13
	Length	14
	Mass	15
	Time	19
	Some Important Masses, Lengths, and Times	20
2.3	Units and Dimensions	20
	Composite Units	22
	Using SI Multipliers	22
	Consistency of Units	24
	Physical Dimensions	25

2.4	Angles and Angular Measure	26
	Vertex and Rays	27
	What Does “Subtend” Mean?	27
	Degrees	27
	More About the Small-Angle Approximation	30
2.5	Thinking About Numbers	32
2.6	Momentum, Force, and Conservation of Momentum	35
	Velocity and Acceleration	35
	Momentum	36
	Force	37
	Why Does $F = ma$?	39
	Conservation of Momentum	40
	Centripetal Forces	43
2.7	Energy	44
	Feynman’s Energy Analogy	45
	Energy Costs Money	47
	Conservation of Energy	47
	Pendulums and Energy	51
	Forces As Variations in Potential Energy	53
2.8	Summary and Exhortations	54
	Connect Concepts to Physical Reality	54
	Know the SI Prefixes	55
	Representing Vectors	56
	Components	57
	Adding Vectors	57
3	The Chemist’s Atoms	63
3.1	Introduction	63
3.2	Chemical Elements	63
3.3	Atoms and Integers	64
	Proust’s Evidence: The Law of Constant Proportions	65
	Dalton’s Evidence: The Law of Multiple Proportions	65
	Gay-Lussac’s Evidence: The Law of Combining Volumes	67
	Avogadro’s Principle	69
3.4	Atomic Weights	70
3.5	Numbers of Atoms in a Sample	74
	The Mole	75
	Avogadro’s Constant	75
3.6	The Chemist’s Atom	77
	Summary	77
	Questions	78
	Answers	78

	CONTENTS	xv
4	Gas Laws	83
4.1	Introduction	83
4.2	Pressure	83
	The Idea of Pressure	83
	Definition of Pressure	85
	Discovery of Vacuum and the Atmosphere	85
	Gas Pressure	89
4.3	Boyle’s Law: The Springiness of Gases	89
	Boyle’s Experiment	89
4.4	Temperature, Gases, and Ideal Gases	94
	Thermal Expansion	94
	Imagining an Ideal Gas	99
	Gay-Lussac’s Law and the Kelvin Temperature Scale	100
4.5	The Ideal Gas Law	102
	What Underlies Such a Simple Law?	104
5	Hard-Sphere Atoms	109
5.1	Introduction	109
5.2	Gas Pressure from Atoms	110
5.3	Temperature and the Energies of Atoms	115
	Energies of Atoms: Boltzmann’s Constant	116
	The Electron Volt (eV)	118
5.4	Summary Thus Far	120
5.5	Size of Atoms	121
	Colliding Atoms, Mean Free Path	122
	Viscosity	124
	An Atomic Model of Viscosity	127
5.7	The Size of Atoms	132
	Radius of a Molecule	132
	Avogadro’s Number	133
5.8	Conclusions	134
	Introduction	135
	Sums and the \sum Notation	136
	Distributions and Averages	137
	A Distribution of Velocities	140
	Momentum Transfers by Collision	140
	Velocity Bins	142
6	Electric Charges and Electric Forces	151
6.1	Introduction	151
6.2	Electric Charge	152
	Experiments with Electroscopes	152
	Conductors and Insulators	157
	Quantitative Measures of Charge	157

6.3	Electric Current	160
	Speed of Charges in a Current	161
6.4	Summary: Electric Charges	164
7	Electric Fields and Electric Forces	169
7.1	Electric Field: A Local Source of Electric Force	169
	Two Useful Electric Fields	171
7.2	Electric Potential Energy and Electric Potential	173
7.3	Electric Potential	178
	Acceleration of Charged Particles Through a Difference of Potential	183
	Energy, Electric Potential, and Electric Current	185
	Visualizing Electric Potential	186
	The Electron Volt	188
7.4	Summary: Electric Field and Electric Potential	190
8	Magnetic Field and Magnetic Force	199
8.1	Magnetic Field	199
	Magnetic Force on a Moving Charge	199
	A Moving Charge in a Uniform Magnetic Field	204
	Sources of Magnetic Fields	207
8.2	Magnetic Fields and Atomic Masses	208
	Magnetic Mass Spectrometry	209
8.3	Large Accelerators and Magnetic Fields	215
8.4	A Summary of Useful Things to Know About Magnetism	217
9	Electrical Atoms and the Electron	229
9.1	Introduction	229
9.2	Electrolysis and the Mole of Charges	230
9.3	Cathode Rays, e/m , and the Electron	235
	The Electrical Nature of Cathode Rays	235
	Deflection	236
9.4	The Electron's Charge	243
	Introduction and Overview	243
	Droplet Size from Terminal Velocity	243
	Finding the Charge on a Droplet	247
	Quantization of Electric Charge	249
	Important Numbers Found from e	252
9.5	Summary	253
9.6	Uses of Electric Deflection	254
	The Inkjet Printer	254
	Quark Hunting	257

10	Waves and Light	285
10.1	Introduction	285
10.2	The Nature of Waves	286
	A Traveling Disturbance	286
	Velocity, Wavelength, and Frequency	287
	Amplitude	290
	Phase	291
	Transverse and Longitudinal Waves	293
	Intensity	294
10.3	Interference of Waves	295
	Interference Along a Line	296
	Visualizing Waves in Three Dimensions—Wavefronts	302
	Interference in Terms of Wavefronts	305
10.4	Light Interferes; It's a Wave	308
	Wavelength of Light Is Color	308
	Analyzing Light: Interference of Light from Slits	309
	Double-Slit Interference	309
	Single-Slit Diffraction	312
	Combined Double-Slit and Single-Slit Patterns	314
	Multislit Interference Patterns	316
	Spectra, Spectrometers, Spectroscopy	317
10.5	Atomic Spectroscopy	319
10.6	Probing Matter with Light	321
10.7	Summary	324
11	Time and Length at High Speeds	339
11.1	Introduction	339
11.2	Approximating a Function	340
	Straight-Line Approximations	341
	Binomial Expansions	344
	Amaze Your Friends!	345
	The Small-Angle Approximation	346
11.3	Frame of Reference	347
	Velocity Depends on Reference Frame	348
	Does Physics Depend on Reference Frame?	349
	How Motion Described in One Frame is Described in Another	350
11.4	The Constancy of c	351
	The Michelson–Morley Experiment	352
	Michelson's Results	359
11.5	Consequences of Constancy of c	361
	Moving Clocks Run Slow—Time Dilation	361
	Moving Lengths Shrink—Lorentz Contraction	365

The Doppler Effect	368
How Do Velocities Transform?	370
Something to Think About	370
12 Energy and Momentum at High Speeds	375
12.1 Introduction	375
12.2 Energy Has Mass	375
Light Exerts Pressure	375
$E = mc^2$	376
Experimental Evidence for $m = \gamma m_0$	379
12.3 Momentum and Energy	382
Relativistic Momentum	383
Relativistic Kinetic Energy	384
Relation Between Energy and Momentum	386
12.4 Masses in eV/c^2 ; Momenta in eV/c	387
12.5 When Can You Approximate?	392
Nonrelativistic Approximations	392
Ultrarelativistic Approximation	394
12.6 Summary	394
13 The Granularity of Light	401
13.1 Introduction	401
13.2 The Photoelectric Effect	401
Discovery of the Photoelectric Effect	401
Properties of the Effect	402
Einstein's Explanation: $E = hf$	406
Experimental Verification of Einstein's Equation	408
13.3 Photomultiplier Tubes: An Application of the Photoelectric Effect	412
How the Photomultiplier Tube Works	413
Parts of a Photomultiplier Tube	413
Scintillation Counting of Radioactivity: A Useful Application	415
13.4 Summary	415
14 X-Rays	421
14.1 Introduction	421
14.2 Properties of X-Rays	421
14.3 Production of X-Rays	422
14.4 X-Rays are Waves	423
14.5 The Bragg Law of Crystal Diffraction	424
Powder Diffraction Patterns	427
14.6 A Device for Measuring X-Rays: The Crystal Spectrometer	429
Determining the Spacing of Atoms in Crystals	429
14.7 Continuum X-Rays	432

14.8 X-Ray Photons	433
14.9 The Compton Effect	435
Introduction	435
Compton Scattering	436
Derivation of the Energy Change of a Compton Scattered Photon	439
Compton Scattering and the Detection of Photons	443
14.10 Summary	446
Useful Things to Know	446
Some Important Things to Keep in Mind	447
15 Particles as Waves	455
15.1 Introduction	455
15.2 The de Broglie Wavelength	455
15.3 Evidence that Particles Act like Waves	457
G.P. Thomson's Experiment	457
The Experiment of Davisson and Germer	462
"Double-Slit" Interference with Electrons	465
Waves of Atoms	467
15.4 Summary and Conclusions	469
Some Useful Things to Know	470
Waves, Energy, and Localization	470
16 Radioactivity and the Atomic Nucleus	479
16.1 Qualitative Radioactivity	480
Becquerel Discovers Radioactivity	480
The Curies Discover New Radioactive Elements	482
Alpha, Beta, and Gamma Rays	483
Radioactive Atoms of One Element Change into Another	485
16.2 Quantitative Properties of Radioactivity	488
Measures of Activity	488
Radioactive Decay and Half-Life	488
16.3 Discovery of the Atom's Nucleus	494
Alpha Particles as Probes of the Atom	494
Discovery of the Atomic Nucleus	496
Nuclear Size and Charge	501
16.4 Nuclear Energies	503
Energies of Alpha and Beta Particles	503
16.5 The Neutron	507
16.6 Summary	509
Introduction	514
Diffraction from a Circular Cross Section	514
Find the Nuclear Radius	515

17 Spectra and the Bohr Atom	517
17.1 Introduction	517
17.2 Atomic Spectra	518
Wall Tapping and Bell Ringing	518
Atomic Spectral Signatures	519
17.3 The Bohr Atom	521
Need for a Model	521
Bohr's Ideas	521
Quantizing the Hydrogen Atom's Energies	522
Energy-Level Diagrams	526
17.4 Confirmations and Applications	529
Energy Levels	529
Rydberg Atoms	530
The Franck–Hertz Experiment	531
Hydrogen-like Ions	535
17.5 How Atoms Got Their (Atomic) Numbers	536
Introduction	536
How many Elements can there be?	536
X-Ray Line Spectra	537
Moseley's Experiment	539
X-Ray Line Spectra and the Bohr Model	542
17.6 Summary	544
The Bohr Model	544
Limitations of the Bohr Model	545
X-Ray Line Spectra	545
Moseley's Law, the Atomic Number, and the Periodic Table	546
18 The Heisenberg Uncertainty Principle	553
18.1 Introduction	553
18.2 Being in Two Places at Once	554
18.3 Heisenberg's Uncertainty Principle	558
18.4 Atom Sizes and Energies from the Uncertainty Principle	561
18.5 General Features of the Uncertainty Principle	565
19 Atoms, Photons, and Quantum Mechanics	569
19.1 Introduction	569
19.2 Basic Ideas of Quantum Theory	570
Superposition and the Uncertainty Principle	570
19.3 Down Conversion, Beam Splitting, Coincidence Counting	571
19.4 Interference of Quanta	575
19.5 Probability Amplitudes and Probabilities	577
Introduction	577
Probability	578

		CONTENTS	xxi
		Probability Amplitudes	580
		Product Rule for Probability Amplitudes	580
		Addition Rule for Probability Amplitudes	581
		Indistinguishability	582
		The Uncertainty Principle, Coherence Length, and Indistinguishability	583
	19.6 Rules of Quantum Mechanics	585	
	Does Interference Occur One Photon at a Time?	586	
	Spookiness of Superposition	587	
	Indistinguishability: An Ingenious Experiment	588	
	19.7 Summary	591	
	20 Entanglement and Non-Locality	597	
	20.1 Introduction	597	
	20.2 Polarization	598	
	The Wave Picture of Polarization	598	
	Sheet Polarizers	601	
	Light Through Polarizers: The Quantum Picture	603	
	A Polarizer Changes a Photon's State	605	
	Indistinguishability and the Quantum Eraser	607	
	20.3 Entangled Quantum States	609	
	Entanglement by Analogy	609	
	Non-Locality of Entanglement	610	
	20.4 Bell's Inequality	612	
	20.5 Violating Bell's Inequality	614	
	Beam-Splitting Polarizer	614	
	Measuring the Photon's State of Polarization	615	
	20.6 Testing Bell's Inequality: Theory and Experiment	619	
	21 Epilogue	629	
	A Useful Information	633	
	A.1 SI Prefixes	633	
	A.2 Basic Physical Constants	634	
	A.3 Constants That You Must Know	634	
	A.4 Miscellaneous	636	
	A.5 Names of Some SI Derived Units	637	
	A.6 SI Base Units	639	
	A.7 Atomic Masses	640	
	A.8 Masses of Nuclides	641	
	A.9 Periodic Table of the Chemical Elements	642	
	Index	645
