<i>Preface</i>	ix
<i>Future Contributions</i>	xi
<i>Contributors</i>	xv
<b>1. Small Angle Scatter with Correlation, Scatter and Intermediate Functions</b>	<b>1</b>
Jay Theodore Cremer, Jr.	
1. Overview of Scatter: Neutron and X-ray Small-angle Scatter in Perspective	2
2. Neutron and X-ray Scatter Amplitude from Non-Bravais Lattice Crystal	6
3. Neutron and X-ray Scatter Intensity from Non-Bravais Lattice Crystal	10
4. Small-angle Scatter: Scatter Length Density and Particle Structure Factor	13
5. Small-angle Scatter: Scatter Amplitudes and Intensity	17
6. The Rayleigh-Gans Equation, Babinet's Principle, and Differential Cross Sections	23
7. Random Variables: Correlation and Independence	27
8. The Scattering Vector Resolution of SANS Instruments for Neutrons and X-rays	29
9. Macroscopic Differential Cross Section: Scatter Length Density Convolution and Correlation	31
10. The Pair Correlation Function	37
11. The Macroscopic Differential Cross Section for Elastic Scatter Expressed By Intermediate Function, and Fourier Transform of Patterson Function	42
12. Scatter Function for Elastic and Inelastic Scatter from Sample Solute Particles Obtained from Neutron (X-ray), Sample-Averaged Scatter Intensity	45
13. Sample-averaged Scatter Intensity Versus Scattering Vector $\mathbf{q}$ for the Guinier, Intermediate, and Porod Regimes	49
14. Small-angle Scatter: Measurement of Solute Particle Size and Shape—Guinier Regime	52
15. Small-angle Scatter from Spherical Particles—Guinier Regime	56
16. Small-angle Scatter from Particles of Various Shapes, Log-log Plots, Method of Contrast Variation—Guinier Regime	59
17. Small-angle Scatter—Intermediate Regime and Porod Regime	62
18. Small-Angle Scatter—Porod Regime and Porod's Law	65
19. Neutron Incoherent Scatter: Solution of the Diffusion Equation with Self-Correlation and Incoherent Scatter Functions, Measurable by Small-angle Scatter	68
20. Neutron Coherent Partial Differential Cross Section: The Scatter Function and the Principle of Detailed Balance	76

21. The Coherent and Incoherent Pair Correlation Function, Intermediate Function, and Scatter Function: the Static Approximation	82
22. The Particle Number Density Operator and the Coherent Intermediate and Pair Correlation Functions	86
23. Neutron Elastic Scatter Occurs Only in Forward Direction for Liquids and Gases Shown by Coherent Intermediate and Scatter Functions	88
24. Neutron Coherent Differential Cross Sections in Crystals Derived from Coherent Scatter and Intermediate Functions	90
25. Pair Correlation Function Expressed by Particle Density Operator and the Patterson Function	95
26. Neutron Coherent Differential Cross Section in Crystals Expressed by Particle Density Operators	97
27. Neutron Incoherent Elastic Differential Cross Section in Crystals Derived from Incoherent Intermediate Function	99
28. Neutron Incoherent Differential Cross Section in Crystals Derived from Incoherent Pair Correlation Function	101
29. No Elastic Scatter Except Forward Direction in Liquids and Gases is Shown by Intermediate and Pair Correlation Functions	103
30. Moments of the Neutron Scatter Function	106
References	110
<b>2. Nuclear Scatter of Neutron Spin States</b>	<b>113</b>
Jay Theodore Cremer, Jr.	
1. Angular Momentum Vectors, Spin Vectors, and Vector Operators	113
2. Heisenberg Uncertainty Principle and Commutation of Operators	116
3. The Neutron Spin Operator	119
4. The Neutron Spin-Lowering and -Raising Operators	120
5. Nuclear Scatter of Neutron Spin States: Partial Differential Cross Section	124
6. Combined Neutron and Nuclear spin Operators for Polarized Neutron Scatter	125
7. Neutron Nuclear Scatter Lengths for Neutron Spin States	129
8. Partial Differential Cross Section for Single Transition Neutron Spin-State Scatter	131
9. Thermal Averaging: Total Partial Differential Cross Section for Neutron Spin-State Scatter	133
10. Neutron Spin-State Scatter Lengths for Ensemble of Nuclear Spins and Isotopes	136
11. Coherent Partial Differential Cross Section for Neutron Spin-State Scatter	138
12. Incoherent Partial Differential Cross Section for Neutron Spin-State Scatter	140
References	143

<b>3. Atomic-Resolution Core-Level Spectroscopy in the Scanning Transmission Electron Microscope</b>	<b>145</b>
Christian Dwyer	
1. Introduction	146
2. Practical Aspects	148
3. Theoretical Aspects	157
4. Selected Applications	186
5. Concluding Remarks	192
Acknowledgements	193
References	194
<b>4. Point Spread Function Engineering for Super-Resolution Single-Photon and Multiphoton Fluorescence Microscopy</b>	<b>201</b>
Partha Pratim Mondal and Alberto Diaspro	
1. Introduction	201
2. Theory	203
3. Results and Discussions	205
4. Conclusions	217
Acknowledgments	218
References	218
<b>5. A Review of Recent Advances in the Hit-or-Miss Transform</b>	<b>221</b>
Paul Murray and Stephen Marshall	
1. Introduction	222
2. Preliminaries and Properties of Mathematical Morphology	224
3. Fundamental Morphological Operations	228
4. Extensions of the Hit-or-Miss Transform	242
5. Conclusions	277
References	279
<b>6. Perspectives on Color Image Processing by Linear Vector Methods Using Projective Geometric Transformations</b>	<b>283</b>
Stephen J. Sangwine	
1. History and Background	283
2. Linear Filtering	285
3. Linear Quaternion Systems and Homogeneous Coordinates	294
4. Quaternion Derivations Of Geometric Operations	301
5. The Difficulty Of Designing Linear Filters	304

6. Conclusion	305
Acknowledgments	305
References	305
