

## Table of Contents

Preface .....	xvi
Scientific Organizing Committee.....	xvii
Welcome .....	xviii

## Plenary Presentations

Pulsars are cool. Seriously. ....	3
<i>S. M. Ransom</i>	
Magnetars: neutron stars with huge magnetic storms.....	11
<i>N. Rea</i>	
Probing gravitation with pulsars .....	19
<i>M. Kramer</i>	

## Session 1: Pulsar Discovery I

The High Time Resolution Universe surveys for pulsars and fast transients ....	29
<i>M. J. Keith on behalf of the HTRU collaboration</i>	
The PALFA Survey: Going to great depths to find radio pulsars .....	35
<i>P. Lazarus on behalf of the PALFA Collaboration</i>	
The hunt for new pulsars with the Green Bank Telescope.....	41
<i>R. S. Lynch, on behalf of the GBT 350 MHz Drift-scan survey and Green Bank North Celestial Cap survey collaborations</i>	
New results from LOFAR .....	47
<i>V. Kondratiev, on behalf of Ben Stappers and the LOFAR Pulsar Working Group</i>	
Conducting the deepest all-sky pulsar survey ever: the all-sky High Time Resolution Universe survey.....	53
<i>C. Ng and the HTRU Collaboration</i>	
A search for pulsars in the central parsecs of the Galactic center .....	57
<i>A. Siemion, M. Bailes, G. Bower, J. Chennamangalam, J. Cordes, P. Demorest, J. Deneva, G. Desvignes, J. Ford, D. Frail, G. Jones, M. Kramer, J. Lazio, D. Lorimer, M. McLaughlin, S. Ransom, A. Roshi, M. Wagner, D. Werthimer, &amp; R. Wharton</i>	

## Session 2: Pulsar Genesis – Neutron-star formation and birth properties

Structure of Quark Stars.....	61
<i>F. Weber, M. Orsaria, H. Rodrigues, &amp; S.-H. Yang</i>	
Numerical modeling of core-collapse supernovae and compact objects .....	67
<i>K. Sumiyoshi</i>	

How “free” are free neutrons in neutron-star crusts and what does it imply for pulsar glitches? . . . . .	73
<i>N. Chamel</i>	
Neutron star structure: what we learn from their masses and radii. . . . .	77
<i>F. Özel</i>	
<b>Session 3: Pulsar Discovery II</b>	
Fermi-LAT searches for $\gamma$ -ray pulsars. . . . .	81
<i>P. M. Saz Parkinson for the Fermi LAT Collaboration</i>	
Radio counterparts of gamma-ray pulsars . . . . .	87
<i>L. Guillemot, on behalf of the Fermi LAT Collaboration, the Fermi Pulsar Search Consortium and the Fermi Pulsar Timing Consortium</i>	
<b>Session 4: Pulsar Diversity</b>	
Rotating Radio Transients and their place among pulsars . . . . .	95
<i>S. Burke-Spolaor</i>	
Central compact objects and their magnetic fields . . . . .	101
<i>W. C. G. Ho</i>	
Discoveries of Rotating Radio Transients in the 350 MHz Green Bank Telescope Drift-scan Survey . . . . .	107
<i>C. Karako-Argaman and the GBT Drift-scan Collaboration</i>	
Pulsar searches in nearby dwarf spheroidal galaxies . . . . .	111
<i>E. Rubio-Herrera &amp; T. Maccarone</i>	
The decaying magnetic field of magnetars: evidence and inference . . . . .	115
<i>S. Dall’Osso</i>	
The first radio-quiet millisecond pulsar? . . . . .	116
<i>A. Belfiore</i>	
X-ray properties of rotation-powered pulsars. . . . .	117
<i>G. Pavlov &amp; O. Kargaltsev</i>	
<b>Session 5: Binary Pulsars</b>	
Binary pulsar evolution: unveiled links and new species. . . . .	121
<i>A. Possenti</i>	
Surrounded by spiders! New black widows and rebacks in the Galactic field . . .	127
<i>M. S. E. Roberts</i>	
Formation of the planet orbiting the millisecond pulsar J1719–1438. . . . .	133
<i>L. M. van Haften, G. Nelemans, R. Voss &amp; P. G. Jonker</i>	
Recycling Pulsars: spins, masses and ages . . . . .	137
<i>T. M. Tauris, M. Kramer &amp; N. Langer</i>	
A peculiar thermonuclear X-ray burst from the transiently accreting neutron star SAX J1810.8–260 . . . . .	141
<i>N. Degenaar &amp; R. Wijnands</i>	

Constraining neutron star EoS from cooling stages of X-ray bursts . . . . .	145
<i>J. Poutanen &amp; V. Suleimanov</i>	
Neutron star masses . . . . .	146
<i>D. Nice</i>	
<b>Session 6: Neutron star vibration and emission</b>	
Merging neutron star binaries: equation of state and electrodynamics . . . . .	149
<i>D. Lai</i>	
Quasi-Periodic Oscillations in magnetars: linking variability and emission . . . . .	155
<i>C. D'Angelo</i>	
Neutron star seismology . . . . .	159
<i>N. Andersson</i>	
Magnetar X-ray emission mechanisms . . . . .	160
<i>S. Zane</i>	
Long timescale radio emission variability and spin-down changes in PSR J0738-4042 . . . . .	161
<i>A. Karastergiou, P. Brook, S. Roberts, S. Buchner &amp; S. Johnston</i>	
<b>Session 7: Pulsar timing and testing gravitational theories</b>	
Pulsar Timing Arrays: Status & Techniques . . . . .	165
<i>G. Hobbs</i>	
Prospects for probing strong gravity with a pulsar-black hole system . . . . .	171
<i>N. Wex, K. Liu, R. P. Eatough, M. Kramer, J. M. Cordes &amp; T. J. W. Lazio</i>	
Constraining the nanohertz gravitational wave background with the Parkes Pulsar Timing Array . . . . .	177
<i>R. Shannon</i>	
Stochastic and continuous gravitational wave analysis pipelines for pulsar timing array data . . . . .	178
<i>J. Ellis, F. Jenet, X. Siemens &amp; M. McLaughlin</i>	
19 Years of high precision timing of the millisecond pulsar J1713+0747 . . . . .	179
<i>W. Zhu</i>	
Update on the European Pulsar Timing Array . . . . .	180
<i>K. Liu</i>	
<b>Session 8: Pulsar Timing</b>	
Timing noise and the long-term stability of pulsar profiles . . . . .	183
<i>A. Lyne</i>	

Testing gravity theories in the radiative regime using pulsar timing arrays . . . . .	189
<i>K. J. Lee</i>	
The spin evolution of young pulsars . . . . .	195
<i>C. M. Espinoza</i>	
PSR J1906+0746: From relativistic spin-precession to beam modeling. . . . .	199
<i>G. Desvignes, M. Kramer, I. Cognard, L. Kasian, J. van Leeuwen, I. Stairs &amp; G. Theureau</i>	
The superslow pulsation X-ray pulsars in high mass X-ray binaries . . . . .	203
<i>W. Wang</i>	
Vela Glitch Monitoring from HartRAO . . . . .	207
<i>S. Buchner</i>	
On the peculiarities in the spin-down of isolated radio pulsars . . . . .	208
<i>A. Chukwude</i>	
<b>Session 9: Pulsars and the interstellar medium</b>	
Galactic structure and turbulence, pulsar distances, and the intergalactic medium	211
<i>J. M. Cordes</i>	
Interstellar scattering — New diagnostics of pulsars and the ISM. . . . .	217
<i>J.-P. Macquart</i>	
Pulsars as excellent probes for the magnetic structure in our Milky Way. . . . .	223
<i>J. Han</i>	
Pilot pulsar surveys with LOFAR. . . . .	229
<i>T. Coenen, on behalf of the LOFAR Pulsar Working Group</i>	
FRATs: Searching for fast radio transient in real-time with LOFAR . . . . .	233
<i>H. Falcke and the ILT LOFAR Consortium</i>	
<b>Session 10: Galactic distribution and evolution of neutron stars</b>	
The Galactic Millisecond Pulsar Population . . . . .	237
<i>D. R. Lorimer</i>	
The pulsar population in Globular Clusters and in the Galaxy . . . . .	243
<i>P. C. C. Freire</i>	
Pulsar Wind Nebulae: On their growing diversity and association with highly mag- netized neutron stars . . . . .	251
<i>S. Safi-Harb</i>	
Constraining the luminosity function parameters and population size of radio pulsars in globular clusters . . . . .	257
<i>J. Chennamangalam, D. R. Lorimer, I. Mandel &amp; M. Bagchi</i>	
The extended X-ray emission around RRAT J1819–1458 . . . . .	261
<i>A. Camero-Arranz, N. Rea, M. A. McLaughlin, N. Bucciantini, P. Slane, B. Gaensler, D. Torres, L. Stella, E. de Oña, G. Israel, F. Camilo &amp; A. Possenti</i>	

Diffusion and advection model for particle transport in young pulsar wind nebulae <i>X. Tang &amp; R. A. Chevalier</i>	265
Science with radio pulsar astrometry . . . . . <i>S. Chatterjee</i>	269
<b>Session 11: Pulsar magnetosphere and emission mechanisms</b>	
The complex charm of the pulsar magnetosphere . . . . . <i>A. N. Timokhin</i>	273
The structure of the pulsar magnetosphere via particle simulation with GRAPE . . . . . <i>S. Shibata</i>	279
Pulsar electrodynamics revisited . . . . . <i>D. B. Melrose &amp; R. Yuen</i>	283
Resistivity and dissipation in pulsar magnetospheres . . . . . <i>J. Li, A. Spitkovsky, &amp; A. Tchekhovskoy</i>	287
Modeling of pulsar magnetospheres . . . . . <i>A. Spitkovsky</i>	291
<b>Session 12: Emission mechanisms</b>	
Radio pulsar variability . . . . . <i>E. F. Keane</i>	295
Elementary radiation patterns in pulsar profiles . . . . . <i>J. Dyks &amp; B. Rudak</i>	301
Pulsars in gamma rays: What <i>Fermi</i> is teaching us . . . . . <i>M. Kerr and the Fermi-LAT Collaboration</i>	307
Binary pulsar B1259-63 spectrum evolution: detailed study . . . . . <i>M. Dembska, J. Kijak &amp; W. Lewandowski</i>	313
Pulsar emission at the bottom end of the electromagnetic spectrum . . . . . <i>V. Kondratiev and the LOFAR Pulsar Working Group</i>	317
“An X-Raydio Switcheroo” – The detection of correlated mode changes in radio and X-ray . . . . . <i>J. van Leeuwen, W. Hermsen, J. Hessels, L. Kuiper, D. Mitra, J. Rankin, B. Stappers &amp; G. Wright</i>	321
A multi-wavelength campaign to study giant pulses from the Crab Pulsar . . . . . <i>W. Majid</i>	322
<b>Session 13: Future facilities</b>	
The Five-hundred-meter Aperture Spherical radio Telescope project and its early science opportunities . . . . . <i>D. Li, R. Nan &amp; Z. Pan</i>	325

NuSTAR observations of rotation-powered pulsars and magnetars . . . . .	331
<i>V. M. Kaspi, H. An, M. Bachetti, E. Bellm, A. M. Beloborodov, S. Boggs, D. Chakrabarty, F. Christensen, B. Craig, F. Dufour, F. Harrison, E. V. Gotthelf, T. Kitaguchi, C. Kouveliotou, K. Mori, M. Pivovarov, D. Stern, J. K. Vogel, W. Zhang, &amp; The NuSTAR Team</i>	
The Square Kilometre Array . . . . .	337
<i>A. R. Taylor</i>	
<b>Summary</b>	
Closing remarks . . . . .	345
<i>J. Bell Burnell</i>	
<b>Posters</b>	
High magnetic field pulsars with magnetar-like activity . . . . .	351
<i>Y. Aoki</i>	
R-Process nucleosynthesis in high entropy environment in explosion of supernova type II and neutron star formation . . . . .	352
<i>R. Baruah, K. Duorah, &amp; H. L. Duorah</i>	
A new low-B magnetar: Swift J1822.3–1606 . . . . .	353
<i>A. Camero-Arranz, N. Rea, G. L. Israel, P. Esposito, J. A. Pons, R. P. Mignani, R. Turolla, S. Zane, M. Burgay, A. Possenti, S. Campana, T. Enoto, N. Gehrels, E. Göğüş, D. Götz, C. Kouveliotou, K. Makishima, S. Mereghetti, &amp; S. R. Oates</i>	
Does a hadron-quark phase transition in dense matter preclude the existence of massive neutron stars ? . . . . .	356
<i>N. Chamel, A. F. Fantina, J. M. Pearson, &amp; S. Goriely</i>	
Unified description of dense matter in neutron stars and magnetars . . . . .	359
<i>N. Chamel, R. L. Pavlov, L. M. Mihailov, Ch. J. Velchev, Zh. K. Stoyanov, Y. D. Mutafchieva, M. D. Ivanovich, A. F. Fantina, J. M. Pearson, &amp; S. Goriely</i>	
Relativistic strange stars with anisotropy and B-parameter in pseudo spheroidal space time . . . . .	362
<i>P. K. Chattopadhyay &amp; B. C. Paul</i>	
Pulsar time scale and its future application . . . . .	365
<i>D. Chen, G. Hobbs, W. Coles, &amp; R. Manchester</i>	
New timing solutions for RRATs . . . . .	366
<i>B. Cui, J. Boyles, M. McLaughlin, &amp; N. Palliyaguru</i>	
Microlensing pulsars . . . . .	369
<i>S. Dai &amp; R. Xu</i>	
Constraints on Yukawa parameters by double pulsars . . . . .	372
<i>X.-M. Deng, Y. Xie, &amp; T.-Y. Huang</i>	

SPAN512: A new mid-latitude pulsar survey with the Nançay Radio Telescope . <i>G. Desvignes, I. Cognard, D. Champion, P. Lazarus, P. Lespagnol, D. A. Smith, &amp; G. Theureau</i>	375
Annular gap model for multi-wavelength pulsed emission from young and millisecond pulsars . . . . . <i>Y. J. Du &amp; G. J. Qiao</i>	378
Characterizing glitches and timing irregularities in pulsars and magnetars . . . . . <i>C. Espinoza, D. Antonopoulou, A. Patruno, B. Stappers, &amp; A. Watts</i>	381
Can we see pulsars around Sgr A*? The latest searches with the Effelsberg telescope. . . . . <i>R. P. Eatough, M. Kramer, B. Klein, R. Karuppusamy, D. J. Champion, P. C. C. Freire, N. Wex, &amp; K. Liu.</i>	382
A survey of nulling pulsars using the Giant Meterwave Radio Telescope . . . . . <i>V. Gajjar, B. C. Joshi, &amp; M. Kramer</i>	385
The surface and inner temperatures of magnetars . . . . . <i>Z. F. Gao, N. Wang, &amp; Q. H. Peng</i>	386
<i>Chandra</i> observations of black widow pulsars . . . . . <i>P. Gentile, M. McLaughlin, M. Roberts, F. Camilo, J. Hessels, M. Kerr, S. Ransom, P. Ray, &amp; I. Stairs</i>	389
Spin rotation, Chandler wobble and free core nutation of isolated multi-layer pulsars <i>A. Gusev &amp; I. Kitiashvili</i>	392
Constraints of the compactness of the isolated neutron stars via X-ray phase-resolved spectroscopy. . . . . <i>V. Hambaryan, V. Suleimanov, R. Neuhäuser, &amp; K. Werner</i>	393
Magnetars are super hot and super cool . . . . . <i>W. C. G. Ho, K. Glampedakis, &amp; N. Andersson</i>	396
Birth accelerations of neutron stars . . . . . <i>R. Heras</i>	399
An XMM-Newton study of the supernova remnant G296.7–0.9. . . . . <i>R. H. H. Huang, C. Y. Hui, L. Trepl, &amp; A. K. H. Kong</i>	402
X-ray studies of the black widow pulsar PSR B1957+20 . . . . . <i>R. H. H. Huang, A. K. H. Kong, J. Takata, C. Y. Hui, L. C. C. Lin, &amp; K. S. Cheng</i>	405
Neutron stars: history of the magnetic field decay . . . . . <i>A. P. Igoshev &amp; A. F. Kholtygin</i>	408
Population synthesis of young neutron stars . . . . . <i>A. P. Igoshev &amp; A. F. Kholtygin</i>	411
Testing the relationship between nulling, drifting and mode-changing . . . . . <i>B. C. Joshi</i>	414

Distribution of ionized gas density measured by differential VLBI Observations of pulsars. . . . .	417
<i>O. Kameya</i>	
Gamma-ray emission from pulsar binaries. . . . .	418
<i>J. Kirk &amp; I. Mochoł</i>	
TeV cosmic-ray electrons from millisecond pulsars . . . . .	419
<i>S. Kisaka &amp; N. Kawanaka</i>	
Infrared AKARI observations of magnetars 4U 0142+61 and 1E 2259+586. . . . .	422
<i>T. Kohmura, K. Kaneko, S. Ikeda, M. Morii, K. Asano, M. Shirahara, &amp; N. Shibazaki</i>	
Magnetic field evolution in magnetars . . . . .	425
<i>Y. Kojima</i>	
Recoil velocity of pulsar/magnetar induced by magnetic dipole and quadrupole radiation . . . . .	428
<i>Y. Kojima</i>	
A pulsar census of the Local Group . . . . .	431
<i>V. Kondratiev, D. Lorimer, M. McLaughlin, &amp; S. Ransom</i>	
Tracking dispersion measure variations of timing array pulsars with the GMRT. . . . .	432
<i>U. Kumar, Y. Gupta, W. van Straten, S. Ostrowski, J. Roy, N. D. R. Bhat, M. Bailes, &amp; M. J. Keith</i>	
H-cluster stars . . . . .	435
<i>X. Y. Lai &amp; R. X. Xu</i>	
A data analysis library for gravitational wave detection. . . . .	438
<i>A. Lassus, R. van Haasteren, C. M. F. Mingarelli, K. J. Lee, &amp; A. Vecchio</i>	
Modelling X-ray Pulse Profiles of Millisecond Pulsars . . . . .	441
<i>D. A. Leahy, S. Morsink, &amp; W. Tian</i>	
Broadband spectral investigations of SGR J1550–5418 bursts. . . . .	444
<i>L. Lin &amp; E. Göğüş</i>	
Profile stability and timing precision limit of millisecond pulsars . . . . .	447
<i>K. Liu</i>	
The missing compact star of SN1987A: a solid quark star? . . . . .	448
<i>X. W. Liu, J. D. Liang, R. X. Xu, J. L. Han, &amp; G. J. Qiao</i>	
Relativistic Cowling approximation for fluid oscillation modes of color superconducting self-bound stars. . . . .	451
<i>G. Lugones &amp; C. V. Flores</i>	
New observations of the Geminga pulsar at low radio frequencies. . . . .	452
<i>V. M. Malofeev, O. I. Malov, S. V. Logvinenko, &amp; D. A. Tepliykh</i>	
Do magnetars really exist? . . . . .	455
<i>I. F. Malov</i>	
Revisiting quark stars under the influence of strong magnetic fields. . . . .	458
<i>D. Menezes</i>	

The slow X-ray pulsar SXP 1062 and associated supernova remnant in the Wing of the Small Magellanic Cloud . . . . .	459
<i>L. M. Oskinova, M. A. Guerrero, V. Hénault-Brunet, W. Sun, Y.-H. Chu, C. Evans, J. S. Gallagher, III, R. A. Gruendl, &amp; J. Reyes-Iturbide</i>	
Seven pulsars in binary systems above the spin-up line . . . . .	462
<i>Y. Y. Pan &amp; N. Wang</i>	
Magnetic Color-flavor-locked Stars . . . . .	465
<i>L. Paulucci, E. J. Ferrer, V. de la Incera, &amp; J. E. Horvath</i>	
Ultra-compact X-ray binaries with high luminosity: a key for a new scenario . . .	468
<i>K. Pavlovskii &amp; N. Ivanova</i>	
Global structure of the pulsar force-free magnetosphere revisited . . . . .	471
<i>S. Petrova</i>	
AXPs & SGRs: Magnetar or Quarctar? . . . . .	474
<i>G. Qiao, X. Liu, R. Xu, Y. Du, J. Han, H. Tong, &amp; H. Wang</i>	
Searches for continuous gravitational waves with the LIGO and Virgo detector .	477
<i>K. Riles, for the LIGO Scientific Collaboration and Virgo Collaboration</i>	
On the environments and progenitors of supernova remnants associated with highly magnetized neutron stars. . . . .	480
<i>S. Safi-Harb &amp; H. S. Kumar</i>	
A high-energy catalogue of Galactic supernova remnants and pulsar wind nebulae	483
<i>S. Safi-Harb, G. Ferrand, &amp; H. Matheson</i>	
The new magnetar Swift J1822.3–1606 . . . . .	486
<i>P. Scholz, C.-Y. Ng, M. A. Livingstone, V. M. Kaspi, A. Cumming, &amp; R. Archibald</i>	
X-ray properties of G308.3-1.4 and its central compact object . . . . .	489
<i>K. A. Seo, C. Y. Hui, R. H. H. Huang, L. Trepl, T.-N. Lu, A. K. H. Kong, &amp; F. M. Walter</i>	
Observations of transients and pulsars with LOFAR international stations and the ARTEMIS backend. . . . .	492
<i>M. Serylak, A. Karastergiou, C. Williams, W. Armour, M. Giles, &amp; the LOFAR Pulsar Working Group</i>	
Evidence for nonlinear and chaotic behaviour in pulsar spin-down rates . . . . .	495
