

Contents

1	Introduction and Preliminaries	1
2	Quantum Information: Basic Relevant Concepts and Applications	13
2.1	Information	13
2.1.1	A Physical Entity	13
2.1.2	Classical and Quantum Information	14
2.1.3	Discritization of Information	14
2.1.4	Bit	15
2.2	Entanglement	22
2.2.1	Definition	23
2.2.2	The EPR Paradox	26
2.2.3	Bell Inequality	27
2.3	Entanglement in Quantum Information Science	30
2.3.1	Quantum Cryptography	31
2.3.2	Dense Coding	31
2.3.3	Quantum Teleportation	32
2.3.4	Quantum Computation	32
2.3.5	Other Applications of Entanglement	33
2.4	Criteria and Measures of Entanglement	33
2.4.1	Criteria of Entanglement	33
2.4.2	Entanglement Measures	41
3	Theory	47
3.1	Density Operators	47
3.1.1	Photoabsorption	47
3.1.2	Spontaneous Emission	50
3.1.3	Photoabsorption Followed by Sequential Spontaneous Emissions	53

3.2	Amplitudes for Atomic Transitions	57
3.2.1	Transition Amplitudes Without Spin–Orbit Interaction	59
3.2.2	Transition Amplitudes with Spin–Orbit Interaction	66
3.3	Amplitudes for Molecular Transitions	74
3.3.1	Transition Amplitudes without Spin-Dependent Interactions	75
3.3.2	Transition Amplitudes with Spin-Dependent Interactions	84
Part I Atomic Processes		
4	Coulombic Entanglement: One-Step Single Photoionization of Atoms	93
4.1	Density Operator and Density Matrix	93
4.1.1	Derivation	93
4.1.2	Properties	97
4.2	Entanglement Between the Spins of an Electronic Qubit and an Ionic Qudit	99
4.2.1	Qubit–Qudit Bipartite States with Negative Partial Transpose: Free Entanglement	100
4.2.2	Qubit–Qudit Bipartite States with Positive Partial Transpose: Bound Entanglement	106
5	Coulombic Entanglement: One-Step Double Photoionization of Atoms	113
5.1	Density Operator and Density Matrix	115
5.1.1	Derivation	115
5.1.2	Properties	119
5.2	Spin-Entanglement Properties of Two Photoelectrons	121
5.2.1	$S_0 = S_{2+} = 0$	122
5.2.2	$ S_0 - S_{2+} = 1$	129
5.2.3	$S_0 = S_{2+} \geq \frac{1}{2}$	131
6	Coulombic Entanglement: Two-Step Double Photoionization of Atoms	135
6.1	Density Matrix	136
6.1.1	Derivation	136
6.1.2	Properties	139
6.2	Spin-Entanglement Properties of a Photo-Auger Electron Pair	140
6.2.1	$S_0 = S_{2+} = S_{1+*} \pm \frac{1}{2} $	141
6.2.2	$ S_0 (= S_{1+*} \pm \frac{1}{2}) - S_{2+} (= S_{1+*} \mp \frac{1}{2}) = 1$	148

7 Fine-Structure Entanglement: Bipartite States of Flying Particles with Rest Mass Different from Zero	149
7.1 Entanglement Between Spin of a Photoelectron e_p and a Fine-Structure Level of a Photoion \mathfrak{T}^{1+} Generated in 1-SPI	150
7.1.1 Density Operator	150
7.1.2 Density Matrix	151
7.1.3 Properties of the Density Matrix	153
7.1.4 Example	155
7.2 Spin-Entanglement Between Two Photoelectrons $(e_p, e_{p'})$ Generated in 1-DPI	160
7.2.1 Density Matrix	160
7.2.2 A Generic Example	165
7.3 Spin-Entanglement in a Photo-Auger Electron Pair (e_p, e_a) Generated in 2-DPI	169
7.3.1 Density Matrix	169
7.3.2 Example: Fine-Structure Spin-Entanglement in a (e_p, e_a) Pair	173
8 Bipartite States of Photonic and Flying Electronic Qubits	179
8.1 Coulombic Entanglement Between (Spin, Polarization) of (e_p, γ_d)	183
8.1.1 Density Operator and Density Matrix	183
8.1.2 Properties of the Density Matrix	186
8.1.3 Are Spin of Photoelectron e_p and Polarization of Photon γ_d Entangled?	186
8.2 Fine-Structure Entanglement Between (Spin, Polarization) of (e_p, γ_d) in the Presence of Both Coulomb Plus Spin–Orbit Interactions	187
8.2.1 Density Operator and Density Matrix	188
8.2.2 Properties of the Density Matrix	190
8.2.3 Example	191
8.2.4 Effects of Hyperfine Interaction and of Noise on (e_p, γ_d) Entanglement	197
Part II Molecular Processes	
9 One-Step Double Photoionization of Molecules	201
9.1 Coulombic Entanglement Between the Spins of Molecular Photoelectrons $(e_p, e_{p'})$	202
9.1.1 Density Matrix	202
9.1.2 Discussions	209
9.2 Fine-Structure Entanglement between the Spins of Molecular Photoelectrons $(e_p, e_{p'})$	212
9.2.1 Density Matrix	212
9.2.2 Discussions	215

10 Two-Step Double Photoionization of Molecules	219
10.1 Coulombic Entanglement Between the Spins of Molecular (Photo, Auger)-Electrons (e_p, e_a)	221
10.1.1 Density Matrix	221
10.1.2 Discussions	223
10.2 Fine-Structure Entanglement Between the Spins of Molecular (Photo, Auger)-Electrons (e_p, e_a)	226
10.2.1 Density Matrix	227
10.2.2 A Generic Example	229

Part III Miscellaneous

11 Conclusions and Prospectives	241
A Density Operator and Density Matrix.....	251
A.1 Completely Random, Pure, and Mixed Systems.....	251
A.2 Averaged Value and Representations	252
A.3 Reduced Density Operator and Density Matrix.....	258
A.4 Miscellaneous	260
B Density Matrix and State Multipoles for a Photon Beam	265
C Decoherence and Dissipation of Quantum Entanglement	269
D A Computer Programme for Calculating 3-j, 6-j, and 9-j Symbols in Powers of Prime Numbers	273
D.1 Methods of Calculation	274
D.2 A Short Description of the Programme	276
D.2.1 Subroutine delta	276
D.2.2 The Driver	277
D.2.3 Subroutine gamafun.....	277
D.2.4 Function logical function.....	278
D.2.5 Subroutine ninej_JB.....	278
D.2.6 Subroutine ninej_6j	278
D.2.7 Subroutine primnum.....	279
D.2.8 Subroutine printr	279
D.2.9 Subroutine sixj.....	279
D.2.10 Subroutine threej	279
D.3 Input.....	280
D.4 Programme Listing	280
D.5 Test Run Output	280
E A Generic Computer Programme for the Coefficient A's Needed in the Calculation of the Density Matrix for Fine-Structure Entanglement in 2-DPI	281
E.1 Method of Calculation	281
E.2 A Short Description of the Programme	282

E.2.1	The Driver	282
E.2.2	block data	283
E.2.3	Subroutine main.....	283
E.3	Input.....	284
E.4	Programme Listing	284
E.5	Test Run Output	284
References	285
Index	295
