Preface	ix
Introduction	xii
1 Electrostatics of Dusty Plasmas	1
1.1 Isolated Grain in a Plasma	1
1.1.1 Grain Charge in a Maxwellian Plasma	2
1.1.2 Non-Maxwellian Velocity Distributions in Plasmas	6
1.1.3 Photoelectrons and Particle Charging in Space	8
1.1.4 Secondary Electron Emission. Ambiguity in Charge Sign and Magnitude	12
1.2 The Charge of a Grain in a Dust Cloud	18
1.2.1 Grain Charge in an Unbounded Dust Cloud	19
1.2.2 Semi-Infinite Dust Cloud. Boundary Layer Effects	23
1.2.3 Dust Layer of Finite Thickness	28
1.3 Electrostatic Fragmentation of Charged Grains	29
1.3.1 Electric Disruption of a Spherical Particle. Critical Radius	29
1.3.2 Non-Spherical Grains	31
1.3.3 Forces Acting on the Detached Particle. Levitation	33
1.4 Coagulation of Neutral and Charged Grains	37
1.4.1 Neutral Particles: Mass Spectrum Formation	37
1.4.2 Effect of Grain Charge on Mass Spectrum Formation	40
2 Gravitoelectrodynamics	45
2.1 Forces Acting on an Isolated Charged Particle in the Vicinity of a Planet	45
2.1.1 Gravitational and Electromagnetic Forces	45
2.1.2 Unipolar Induction	47
2.2 Radiation Pressure and Drag	52
2.2.1 Radiation Pressure	52
2.2.2 Radiation Drag. The Poynting-Robertson Effect	54
2.2.3 Plasma Drag	56
2.2.4 Comparison of the Different Forces	58
2.3 Orbital Motion of Charged Grains	60
2.3.1 Equatorial Plane: Circular Orbits	61
2.3.2 Equatorial Plane: Non-Circular Orbits	65

2.3.3	Gyrophase Drift	69
2.3.4	Magneto-Gravitational and Gyro-Orbital Resonances .	74
2.3.5	Particles Leaving the Equatorial Plane	76
2.4	Polarized Particles Rotating around the Mass Center. Binary Interactions	79
2.4.1	Rotation around the Mass Center	79
2.4.2	Binary Interactions of Polarized Particles	81
2.4.3	The Roche Limit in Gravitoelectrodynamics	84
3	Cooperative Effects in Self-Gravitational and Dusty Plasmas	88
3.1	Waves in the Self-Gravitational Plasma	89
3.1.1	Problem Formulation. Basic Equations	89
3.1.2	Dispersion Laws for Transverse and Longitudinal Waves	91
3.1.3	Electrostatic Waves	94
3.1.4	Dielectric Constant	102
3.1.5	Energy Losses of Moving Particles	105
3.2	Longitudinal Waves in Dusty Plasmas	109
3.2.1	Eigenwave Spectrum. Dust-Sound Waves	110
3.2.2	Wave Damping in a Plasma with Fixed Dust Grains. Nonlinear Landau Damping	117
3.2.3	The Landau Damping due to the Continuous Mass Spectrum of Dust Grains	121
3.2.4	Attenuation due to Grain Charge Variations	125
3.3	Electromagnetic Wave Scattering in the Dusty Plasma	130
3.3.1	Wave Scattering in a Plasma with Fixed Dust Grains	131
3.3.2	Scattering by Dust-Acoustic Waves	134
3.4	Nonlinear Waves	137
3.4.1	Dust-Acoustic Solitons	137
3.4.2	Nonlinear Waves in the Self-Gravitational Plasma . .	142
3.5	Waves in Magnetized Plasmas	146
3.5.1	Magnetized Plasma with Static Dust Grain Configurations	146
3.5.2	Magnetized Dusty Self-Gravitational Plasma: Dielectric Constant Tensor	149
3.5.3	Parallel Propagation	151
3.5.4	Transverse Propagation	157

4 Unstable Disturbances in Flows of Dusty and Self-Gravitational Plasmas	163
4.1 Instability of Mutually Penetrating Dusty Plasma Beams	164
4.1.1 Two-Beam Instability of Unbounded Streams	165
4.1.2 Beams of Bounded Cross-Sections	168
4.1.3 Instability of a Narrow Multicomponent Particle Beam with a Discrete Spectrum of Dust Grain Sizes	171
4.1.4 Continuous Spectrum of Dust Grain Sizes. Effective Beam Temperature	174
4.1.5 Three-Component Beam: Ion-Acoustic and Dust-Acoustic Instabilities	176
4.2 Beam Instability in the Self-Gravitational Dusty Plasma	183
4.2.1 Instability of Neutral Self-Gravitating Beams	184
4.2.2 Two-Beam Instability of the Self-Gravitational Dusty Plasma. Small Amplitudes	189
4.2.3 Two-Beam and Gravitational Instabilities. Numerical Modeling of the Nonlinear Stage	191
4.3 Parametric Instability in a Dusty Plasma with a Periodically Varying Charge of Dust Grains	193
4.3.1 Long Wave Disturbances in a Thin Circular Beam (Model of a Narrow Planetary Ring)	195
4.3.2 Dispersion Relation with the Grain Charge Abruptly Changing at the Light-Shadow Boundary	196
4.3.3 Parametric Resonance and Azimuthal Modulation of the Planetary Ring Brightness	198
5 Dusty and Self-Gravitational Plasmas of Planetary Rings	202
5.1 Planetary Rings	202
5.2 Electromagnetic Effects and Grain Number Profile in the Ring	203
5.2.1 The Dust Grain Distribution Across the Ring Produced by Electrostatic Forces	203
5.2.2 Profile of Dust Concentration with Account of Different Grain Sizes and Thermal Motion	207
5.2.3 Grain Vibrations Across the Ring and Resonances . .	210
5.2.4 Radial Profile of Grain Concentration in the Ring .	217
5.3 Electrostatic Waves in Planetary Rings	220
5.3.1 A Multistream Model for Saturn Rings	221
5.3.2 Electrostatic Waves in Narrow Rings	225

5.3.3	Wavelike Disturbances in Gravitation-Coupled Narrow Rings	226
5.3.4	Waves in a Broad Ring: Model of a Planar Plasma Layer	228
5.3.5	Nonlinear Waves in a Plane Plasma Layer. Soliton Solutions for Envelopes	232
5.4	“Spokes” in Saturn’s Ring	234
5.4.1	Properties of Spokes. Electrostatic and Magnetostatic Hypotheses	235
5.4.2	Dynamic Theories of Spokes	238
5.4.3	Wave Theories	243
