CONTENTS

Preface *vii*
Future Contributions *ix*
Contributors *xiii*

1. Generalized Axiomatic Scale-Space Theory **1**
Tony Lindeberg

1. Introduction 2
2. Image Measurements and the Notion of Scale 4
3. Structural Assumptions of Scale-Space Theory 9
4. Scale-Space Axioms for Spatial Image Domains 12
5. Scale-Space Concepts for Spatial Image Domains 24
6. Scale-Space Axioms for Spatiotemporal Image Domains 43
7. Scale-Space Concepts for Spatiotemporal Image Domains 53
8. Temporal Smoothing Kernels 81
9. History of Axiomatic Scale-Space Formulations 85
10. Summary and Conclusions 89

Acknowledgments 92
References 92

2. Smoothlet Transform: Theory and Applications **97**
Agnieszka Lisowska

1. Introduction 97
2. Smoothlets 100
3. Smoothlet Transform 112
4. Image Compression 124
5. Image Denoising 133
6. Summary 143

References 144

3. Theory and Computation of Electron Mirrors: The Central Particle Method **147**
Evgeniy M. Yakushev

1. Introduction 148
2. Systems with a Straight Optical Axis 150
3. Axially Symmetric Charged-Particle Optical Systems 161

4. Time-of-Flight Mass Spectrometer 209
5. Electron Microscope Objective with an Electron Mirror 230
6. Summary and Conclusions 242
Acknowledgments 244
References 244

CHAPTER ONE

Generalized Axiomatic Scale-Space Theory

Tony Lindeberg
School of Computer Science and Communication, KTH Royal Institute of Technology, Stockholm, Sweden
E-mail: tony@csc.kth.se

Contents

1. Introduction 2
   1.1. Organization of the Presentation 4
2. Image Measurements and the Notion of Scale 4
3. Structural Assumptions of Scale-Space Theory 9
4. Scale-Space Axioms for Spatial Image Domains 12
   4.1. Structural Scale-Space Axioms 13
   4.2. Simplifying Image Structures over Scale 16
      4.2.1. Non-creation of New Image Structures with Increasing Scale 20
   4.3. Covariance Requirements Regarding Spatial Domains 21
5. Scale-Space Concepts for Spatial Image Domains 24
   5.1. General Necessity Result Concerning Gaussian Scale-Spaces 24
   5.2. Rotationally Symmetrical Gaussian Scale-Space 25
   5.3. Affine Gaussian Scale-Space 32
   5.4. Gaussian Color-Opponent Scale-Space 37
   5.5. Uniqueness of the Gaussian Kernel on a Spatial Domain 41
6. Scale-Space Axioms for Spatiotemporal Image Domains 43
   6.1. Scale-Space Axioms Transferred from Spatial to Spatiotemporal Domain 43
   6.2. Additional Scale-Space Axioms for Time-Dependent Image Data 46
      6.2.1. Specific Scale-Space Axioms for a Non-Causal Spatio-Temporal Domain 48
      6.2.2. Special Scale-Space Axioms for a Time-Causal Spatio-Temporal Domain 50
7. Scale-Space Concepts for Spatiotemporal Image Domains 53
   7.1. Non-causal Gaussian Spatiotemporal Scale-Space 53
   7.2. Time-Causal Spatiotemporal Scale-Space 62
      7.2.1. Time-Causal Spatio-Temporal Scale-Space Based on Discrete Temporal Scale Levels (Without True Temporal Covariance) 62
      7.2.2. Time-Causal Spatio-Temporal Scale-Space Based on Continuous Temporal Scale Parameter (With True Temporal Covariance) 70
8. Temporal Smoothing Kernels 81
   8.1. The Truncated and Time-Delayed Gaussian Kernel 81
   8.2. Truncated Exponential Kernels 82
   8.3. The Time-Causal Semigroup and Non-enhancement Kernel $\phi(t; \tau)$ 84

9. History of Axiomatic Scale-Space Formulations 85
10. Summary and Conclusions 89
Acknowledgments 92
References 92

CHAPTER TWO

Smoothlet Transform: Theory and Applications

Agnieszka Lisowska
Institute of Computer Science, University of Silesia, Katowice, Poland
E-mail: alisow@ux2.math.us.edu.pl

Contents

1. Introduction 97
2. Smoothlets 100
   2.1. Blurred Horizon Function 100
   2.2. Curvilinear Beamlets 101
   2.3. Smoothlet Definition 103
   2.4. Image Approximation 106
   2.5. Smoothlet Visualization 107
3. Smoothlet Transform 112
   3.1. Smoothlet Transform Algorithm 112
   3.2. Postprocessing 117
   3.3. Computational Complexity 119
   3.4. Numerical Results 121
4. Image Compression 124
   4.1. Image Coding 125
   4.2. Image Decoding 128
   4.3. Rate-Distortion (R-D) Dependency 129
   4.4. Numerical Results 132
5. Image Denoising 133
   5.1. Image Denoising Algorithm 136
   5.2. Numerical Results 138
6. Summary 143
References 144

CHAPTER THREE

Theory and Computation of Electron Mirrors: The Central Particle Method

Evgeniy M. Yakushev
Institute of Nuclear Physics, Almaty, Kazakhstan
Email: evgeniy.yakushev@inbox.ru

Contents

1. Introduction 148
2. Systems with a Straight Optical Axis 150
   2.1. Electrical and Magnetic Field Representation 150
   2.2. Variation Function Representation 153
   2.3. Time of Flight 158
3. Axially Symmetric Charged-Particle Optical Systems 161
   3.1. Equations of the Trajectory in a Moving System of Coordinates 161
   3.2. Linearization of the Trajectory Equation 164
   3.3. Choice of Particular Solutions of Equations of Paraxial Trajectory 166
   3.4. Integration of Trajectory Equations 169
   3.5. Equations of the Trajectory in a Laboratory System of Coordinates 173
   3.6. Aberrations of the Electron Mirror 175
   3.7. Cathode Lenses 185
   3.8. Exact Computations of Electron Trajectory 199
4. Time-of-Flight Mass Spectrometer 209
   4.1. Time-of-Flight Focusing Equation 210
   4.2. Time-of-Flight Aberrations 214
   4.3. Numerical Computations of Time-of-Flight Properties of the Ion Mirror 218
   4.4. The Effect of a Space Charge on Longitudinal Focusing Ability 226
5. Electron Microscope Objective with an Electron Mirror 230
   5.1. Electron Mirror as the Objective Lens of a Transmission Electron Microscope 231
   5.2. Electron Mirror as a Corrector of Aberrations of an Electron Lens 237
6. Summary and Conclusions 242
Acknowledgments 244
References 244
