Preface to the Second Edition	IX
Preface to the First Edition	XIII
1 Introduction	1
1.1 Statistical Models	1
1.2 Likelihood Methods	5
1.3 Bayesian Methods	12
1.4 Deterministic Numerical Methods	19
1.4.1 Optimization	19
1.4.2 Integration	21
1.4.3 Comparison	21
1.5 Problems	23
1.6 Notes	30
1.6.1 Prior Distributions	30
1.6.2 Bootstrap Methods	32
2 Random Variable Generation	35
2.1 Introduction	35
2.1.1 Uniform Simulation	36
2.1.2 The Inverse Transform	38
2.1.3 Alternatives	40
2.1.4 Optimal Algorithms	41
2.2 General Transformation Methods	42
2.3 Accept-Reject Methods	47
2.3.1 The Fundamental Theorem of Simulation	47
2.3.2 The Accept-Reject Algorithm	51
2.4 Envelope Accept-Reject Methods	53
2.4.1 The Squeeze Principle	53
2.4.2 Log-Concave Densities	56
2.5 Problems	62

2.6	Notes	72	5.4	Problems	188
2.6.1	The Kiss Generator	72	5.5	Notes	200
2.6.2	Quasi-Monte Carlo Methods	75	5.5.1	Variations on EM	200
2.6.3	Mixture Representations	77	5.5.2	Neural Networks	201
3	Monte Carlo Integration	79	5.5.3	The Robbins–Monro procedure	201
3.1	Introduction	79	5.5.4	Monte Carlo Approximation	203
3.2	Classical Monte Carlo Integration	83	6	Markov Chains	205
3.3	Importance Sampling	90	6.1	Essentials for MCMC	206
3.3.1	Principles	90	6.2	Basic Notions	208
3.3.2	Finite Variance Estimators	94	6.3	Irreducibility, Atoms, and Small Sets	213
3.3.3	Comparing Importance Sampling with Accept–Reject	103	6.3.1	Irreducibility	213
3.4	Laplace Approximations	107	6.3.2	Atoms and Small Sets	214
3.5	Problems	110	6.3.3	Cycles and Aperiodicity	217
3.6	Notes	119	6.4	Transience and Recurrence	218
3.6.1	Large Deviations Techniques	119	6.4.1	Classification of Irreducible Chains	218
3.6.2	The Saddlepoint Approximation	120	6.4.2	Criteria for Recurrence	221
4	Controlling Monte Carlo Variance	123	6.4.3	Harris Recurrence	221
4.1	Monitoring Variation with the CLT	123	6.5	Invariant Measures	223
4.1.1	Univariate Monitoring	124	6.5.1	Stationary Chains	223
4.1.2	Multivariate Monitoring	128	6.5.2	Kac’s Theorem	224
4.2	Rao–Blackwellization	130	6.5.3	Reversibility and the Detailed Balance Condition	229
4.3	Riemann Approximations	134	6.6	Ergodicity and Convergence	231
4.4	Acceleration Methods	140	6.6.1	Ergodicity	231
4.4.1	Antithetic Variables	140	6.6.2	Geometric Convergence	236
4.4.2	Control Variates	145	6.6.3	Uniform Ergodicity	237
4.5	Problems	147	6.7	Limit Theorems	238
4.6	Notes	153	6.7.1	Ergodic Theorems	240
4.6.1	Monitoring Importance Sampling Convergence	153	6.7.2	Central Limit Theorems	242
4.6.2	Accept–Reject with Loose Bounds	154	6.8	Problems	247
4.6.3	Partitioning	155	6.9	Notes	258
5	Monte Carlo Optimization	157	6.9.1	Drift Conditions	258
5.1	Introduction	157	6.9.2	Eaton’s Admissibility Condition	262
5.2	Stochastic Exploration	159	6.9.3	Alternative Convergence Conditions	263
5.2.1	A Basic Solution	159	6.9.4	Mixing Conditions and Central Limit Theorems	263
5.2.2	Gradient Methods	162	6.9.5	Covariance in Markov Chains	265
5.2.3	Simulated Annealing	163	7	The Metropolis–Hastings Algorithm	267
5.2.4	Prior Feedback	169	7.1	The MCMC Principle	267
5.3	Stochastic Approximation	174	7.2	Monte Carlo Methods Based on Markov Chains	269
5.3.1	Missing Data Models and Demarginalization	174	7.3	The Metropolis–Hastings algorithm	270
5.3.2	The EM Algorithm	176	7.3.1	Definition	270
5.3.3	Monte Carlo EM	183	7.3.2	Convergence Properties	272
5.3.4	EM Standard Errors	186	7.4	The Independent Metropolis–Hastings Algorithm	276
			7.4.1	Fixed Proposals	276

7.4.2	A Metropolis–Hastings Version of ARS	285	10.1.3	The General Hammersley–Clifford Theorem	376
7.5	Random Walks	287	10.2	Theoretical Justifications	378
7.6	Optimization and Control	292	10.2.1	Markov Properties of the Gibbs Sampler	378
7.6.1	Optimizing the Acceptance Rate	292	10.2.2	Gibbs Sampling as Metropolis–Hastings	381
7.6.2	Conditioning and Accelerations	295	10.2.3	Hierarchical Structures	383
7.6.3	Adaptive Schemes	299	10.3	Hybrid Gibbs Samplers	387
7.7	Problems	302	10.3.1	Comparison with Metropolis–Hastings Algorithms	387
7.8	Notes	313	10.3.2	Mixtures and Cycles	388
7.8.1	Background of the Metropolis Algorithm	313	10.3.3	Metropolizing the Gibbs Sampler	392
7.8.2	Geometric Convergence of Metropolis–Hastings Algorithms	315	10.4	Statistical Considerations	396
7.8.3	A Reinterpretation of Simulated Annealing	315	10.4.1	Reparameterization	396
7.8.4	Reference Acceptance Rates	316	10.4.2	Rao–Blackwellization	402
7.8.5	Langevin Algorithms	318	10.4.3	Improper Priors	403
8	The Slice Sampler	321	10.5	Problems	407
8.1	Another Look at the Fundamental Theorem	321	10.6	Notes	419
8.2	The General Slice Sampler	326	10.6.1	A Bit of Background	419
8.3	Convergence Properties of the Slice Sampler	329	10.6.2	The BUGS Software	420
8.4	Problems	333	10.6.3	Nonparametric Mixtures	420
8.5	Notes	335	10.6.4	Graphical Models	422
8.5.1	Dealing with Difficult Slices	335	11	Variable Dimension Models and Reversible Jump Algorithms	425
9	The Two-Stage Gibbs Sampler	337	11.1	Variable Dimension Models	425
9.1	A General Class of Two-Stage Algorithms	337	11.1.1	Bayesian Model Choice	426
9.1.1	From Slice Sampling to Gibbs Sampling	337	11.1.2	Difficulties in Model Choice	427
9.1.2	Definition	339	11.2	Reversible Jump Algorithms	429
9.1.3	Back to the Slice Sampler	343	11.2.1	Green’s Algorithm	429
9.1.4	The Hammersley–Clifford Theorem	343	11.2.2	A Fixed Dimension Reassessment	432
9.2	Fundamental Properties	344	11.2.3	The Practice of Reversible Jump MCMC	433
9.2.1	Probabilistic Structures	344	11.3	Alternatives to Reversible Jump MCMC	444
9.2.2	Reversible and Interleaving Chains	349	11.3.1	Saturation	444
9.2.3	The Duality Principle	351	11.3.2	Continuous-Time Jump Processes	446
9.3	Monotone Covariance and Rao–Blackwellization	354	11.4	Problems	449
9.4	The EM–Gibbs Connection	357	11.5	Notes	458
9.5	Transition	360	11.5.1	Occam’s Razor	458
9.6	Problems	360	12	Diagnosing Convergence	459
9.7	Notes	366	12.1	Stopping the Chain	459
9.7.1	Inference for Mixtures	366	12.1.1	Convergence Criteria	461
9.7.2	ARCH Models	368	12.1.2	Multiple Chains	464
10	The Multi-Stage Gibbs Sampler	371	12.1.3	Monitoring Reconsidered	465
10.1	Basic Derivations	371	12.2	Monitoring Convergence to the Stationary Distribution	465
10.1.1	Definition	371	12.2.1	A First Illustration	465
10.1.2	Completion	373	12.2.2	Nonparametric Tests of Stationarity	466
			12.2.3	Renewal Methods	470

12.2.4	Missing Mass	474	14.4.2	General Iterative Importance Sampling	560
12.2.5	Distance Evaluations	478	14.4.3	Population Monte Carlo	562
12.3	Monitoring Convergence of Averages	480	14.4.4	An Illustration for the Mixture Model	563
12.3.1	A First Illustration	480	14.4.5	Adaptativity in Sequential Algorithms	565
12.3.2	Multiple Estimates	483	14.5	Problems	570
12.3.3	Renewal Theory	490	14.6	Notes	577
12.3.4	Within and Between Variances	497	14.6.1	A Brief History of Particle Systems	577
12.3.5	Effective Sample Size	499	14.6.2	Dynamic Importance Sampling	577
12.4	Simultaneous Monitoring	500	14.6.3	Hidden Markov Models	579
12.4.1	Binary Control	500	A	Probability Distributions	581
12.4.2	Valid Discretization	503	B	Notation	585
12.5	Problems	504	B.1	Mathematical	585
12.6	Notes	508	B.2	Probability	586
12.6.1	Spectral Analysis	508	B.3	Distributions	586
12.6.2	The CODA Software	509	B.4	Markov Chains	587
13	Perfect Sampling	511	B.5	Statistics	588
13.1	Introduction	511	B.6	Algorithms	588
13.2	Coupling from the Past	513	References		591
13.2.1	Random Mappings and Coupling	513	Index of Names		623
13.2.2	Propp and Wilson's Algorithm	516	Index of Subjects		631
13.2.3	Monotonicity and Envelopes	518			
13.2.4	Continuous States Spaces	523			
13.2.5	Perfect Slice Sampling	526			
13.2.6	Perfect Sampling via Automatic Coupling	530			
13.3	Forward Coupling	532			
13.4	Perfect Sampling in Practice	535			
13.5	Problems	536			
13.6	Notes	539			
13.6.1	History	539			
13.6.2	Perfect Sampling and Tempering	540			
14	Iterated and Sequential Importance Sampling	545			
14.1	Introduction	545			
14.2	Generalized Importance Sampling	546			
14.3	Particle Systems	547			
14.3.1	Sequential Monte Carlo	547			
14.3.2	Hidden Markov Models	549			
14.3.3	Weight Degeneracy	551			
14.3.4	Particle Filters	552			
14.3.5	Sampling Strategies	554			
14.3.6	Fighting the Degeneracy	556			
14.3.7	Convergence of Particle Systems	558			
14.4	Population Monte Carlo	559			
14.4.1	Sample Simulation	560
