

# Contents

<b>Chapter 1</b>	<b>The Rare Earths</b>	<b>1</b>
1-1	Electronic Structure,	1
1-2	Rare Earth Spectra and Electronic Properties,	6
<b>Chapter 2</b>	<b>Energy Levels of Rare Earth Atoms and Ions</b>	<b>8</b>
2-1	Principal Electronic Configurations,	8
2-2	The Central Field Approximation,	9
2-3	Classification of States,	11
2-4	The Seniority Number,	13
2-5	Coefficients of Fractional Parentage,	14
2-6	Matrix Elements of Operators,	17
2-7	Electrostatic Interaction for Two Electrons,	22
2-8	One- and Two-Electron Operators,	26
2-9	Electrostatic Interactions in $f^N$ Configurations,	28
2-10	Electrostatic Interactions in $l^N l'$ type Configurations,	30
2-11	Spin-Orbit Interactions,	35
2-12	Calculation of Energy Levels,	39
2-13	Energy Levels of $f^N$ Configurations,	42
2-14	Coupling Schemes and Energy-Level Diagrams,	49
2-15	$J_1 l$ Coupling in the Rare Earths,	63
2-16	Coupling Schemes for $f^N l l'$ Configurations,	67
2-17	Configuration Interaction,	69
2-18	Atomic Wave Functions and the Empirical Parameters,	75
2-19	Remaining Interactions,	78
<b>Chapter 3</b>	<b>Intensities in Rare Earth Spectra</b>	<b>83</b>
3-1	Transition Probabilities,	83
3-2	Calculation of Line Strengths,	85
3-3	Line Strengths in $J_1 j$ Coupling,	89
3-4	Line Strengths in Intermediate Coupling,	89
3-5	Transitions between Differently Coupled Configurations,	91
3-6	Estimation of the Radial Integrals,	92
3-7	The Oscillator Strengths of Eu II,	93

<b>Chapter 4</b>	<b>The Zeeman Effect in the Rare Earths</b>	<b>97</b>
4-1	The Zeeman Effect, 97	
4-2	<i>LS</i> Coupling, 98	
4-3	$J_1j$ Coupling, 99	
4-4	$J_1l$ Coupling, 100	
4-5	Intermediate Coupling, 101	
4-6	Relativistic and Diamagnetic Corrections, 103	
4-7	Relative Intensities and Polarization of Zeeman Spectra, 106	
4-8	Characteristics of Zeeman Patterns, 108	
<b>Chapter 5</b>	<b>Hyperfine Structure and Isotope Shifts</b>	<b>111</b>
5-1	Nuclear Moments, 111	
5-2	Magnetic Hyperfine Structure in $f^N$ Configurations, 112	
5-3	Electric-Quadrupole Splittings in $f^N$ Configurations, 118	
5-4	Hyperfine Splittings in $f^Nl$ Configurations, 121	
5-5	Hyperfine Splittings in the $f^Ns$ Configurations, 124	
5-6	Relativistic Corrections and Hyperfine Structure, 125	
5-7	Nuclear Volume Effects, 136	
5-8	Isotope Shifts and Hyperfine-Structure Anomalies, 138	
5-9	Configuration Interaction and Hyperfine Structure, 148	
5-10	Relative Intensities and Hyperfine Patterns, 153	
5-11	Zeeman Effect and Hyperfine Structure, 155	
5-12	Atomic Beam Resonance Measurements, 157	
5-13	Optical Hyperfine-Structure Measurements, 160	
5-14	Concluding Remarks on Hyperfine Structure, 162	
<b>Chapter 6</b>	<b>Spectra of Rare Earth Salts</b>	<b>163</b>
6-1	Crystal Field Splitting of Energy Levels, 163	
6-2	Applications of Group Theory to Crystal Spectra, 170	
6-3	Symmetry and Crystal Field Splittings, 175	
6-4	Descending Symmetries, 179	
6-5	Crystal Quantum Numbers and Irreducible Representations, 183	
6-6	The Zeeman Effect in Rare Earth Crystals, 185	
6-7	Energy Levels of Rare Earth Ions in Crystals and Solutions, 190	
6-8	Crystal Spectra of Divalent Rare Earths, 194	
6-9	Crystal Field Calculations, 198	
6-10	Intensities of Rare Earth Crystal and Solution Spectra, 205	
6-11	Crystal Field Models, 213
