<i>Preface</i>	v
1. Introduction	1
1.1 Nuclear Physics and Astrophysics	1
1.2 The Milky Way	2
1.3 Dark Matter	3
1.4 Hertzsprung–Russell Diagram	5
1.4.1 Luminosity	5
1.4.2 Magnitudes	7
1.4.3 Color index	7
1.4.4 Mass–luminosity relation	8
1.4.5 Stellar evolution	10
1.5 Hubble’s Law	11
1.6 Stars and Galaxies	14
1.7 Principles and Observations	16
1.8 Cosmic Microwave Background	18
1.9 Exercises	21
2. Space and Matter	25
2.1 Introduction	25
2.2 Friedmann Equation	26
2.2.1 Energy and pressure	26
2.2.2 Friedmann equation	28
2.2.3 The cosmological constant	30
2.2.4 Energy density and dark energy	31
2.2.5 Static Universe	34
2.2.6 Matter and radiation profiles	35
2.2.7 The age of the Universe	35

2.3	Solutions of the Friedmann Equation	36
2.3.1	Deceleration parameter	36
2.3.2	Flat Universe	38
2.3.3	Closed Universe	39
2.3.4	Open Universe	40
2.3.5	The flatness problem	41
2.3.6	The horizon problem	41
2.4	The Curvature of Space-Time	43
2.4.1	Einstein field equations	43
2.4.2	The FRW metric	45
2.4.3	The Schwarzschild metric	46
2.4.4	Gravitational waves	47
2.4.5	Black holes	49
2.4.6	Inflation	52
2.5	Exercises	54
3.	Particles	57
3.1	Introduction	57
3.2	Properties of Elementary Particles	58
3.2.1	Antiparticles	58
3.2.2	Spin, isospin and baryonic number	59
3.2.3	Strangeness and hypercharge	60
3.2.4	Quarks and gluons	61
3.3	Nuclear Properties	65
3.3.1	Sizes	65
3.3.2	Binding energies	66
3.3.3	Angular momentum	68
3.3.4	Excited states	68
3.3.5	Nuclear stability	69
3.4	Nuclear Models	72
3.4.1	The liquid drop model	72
3.4.2	Non-relativistic Fermi gas	75
3.4.3	Fermi gas at $T \neq 0$	79
3.4.4	The Fermi gas model of the nucleus	80
3.4.5	The shell model	82
3.5	Exercises	87

4.	Radiation	91
4.1	Introduction	91
4.2	Interaction of Radiation with Matter	91
4.2.1	Lifetime of unstable states	91
4.2.2	Decay rate of unstable states	93
4.2.3	Multipole radiation	96
4.2.4	Selection rules	97
4.3	Propagation of Radiation	99
4.3.1	Radiation intensity	99
4.3.2	Radiative energy transport	102
4.3.3	The equation of radiative transfer	102
4.4	Blackbody Radiation	104
4.4.1	Boltzmann law	104
4.4.2	Planck's law	106
4.4.3	Stefan–Boltzmann law	108
4.5	Radiation in Stellar Plasmas	111
4.5.1	Stellar atmospheres	111
4.5.2	Einstein coefficients	114
4.5.3	Maxwell's velocity distribution	116
4.5.4	Saha equation	117
4.6	Opacities in Stars	119
4.6.1	Absorption and emission coefficients	119
4.6.2	Bound–bound transitions — oscillator strength	121
4.7	Exercises	125
5.	Nuclear Reactions	129
5.1	Introduction	129
5.2	Nuclear Scattering	131
5.3	Partial Wave Expansion	133
5.3.1	Low energy scattering	137
5.3.2	Scattering and reaction cross-sections	139
5.4	Potential Scattering	141
5.4.1	Coulomb scattering	141
5.4.2	Resonances	145
5.4.3	Optical potentials	148

5.5	Compound Nucleus	150
5.5.1	Compound nucleus formation	150
5.5.2	Compound nucleus decay	157
5.5.3	Reciprocity theorem	161
5.5.4	The Hauser–Feshbach theory	162
5.6	Heavy Ion Collisions	164
5.7	Relativistic Nuclear Collisions	168
5.8	Exercises	171
6.	Stellar Structure	175
6.1	Introduction	175
6.2	Hydrostatic Support	176
6.2.1	Mass conservation	177
6.2.2	Dynamical timescales and non-spherical symmetry	178
6.2.3	Pressure, temperature and virial theorem	180
6.2.4	Energy generation in stars	184
6.2.5	Galaxy and star formation	186
6.3	Equation of State	188
6.3.1	Classical gases with multiple particle species	188
6.3.2	Non-relativistic Fermi gas	191
6.3.3	Relativistic electron gas	193
6.4	Polytropic Models	194
6.5	Compact Stars	199
6.5.1	Energy production	207
6.5.2	Energy transport	208
6.6	Radiative Transport	213
6.6.1	Solving the equations of stellar structure	219
6.6.2	Luminosity of white dwarfs	224
6.7	Structure of Neutron Stars	226
6.7.1	Relativistic corrections for neutron stars	226
6.7.2	Neutron stars with nucleons and electrons	232
6.8	Additional Stellar Properties	239
6.8.1	Seismology and pulsation	240
6.9	Exercises	242

7.	Reactions in the Cosmos	245
7.1	Introduction	245
7.2	Thermonuclear Cross-Sections	247
7.2.1	Nuclear abundances	247
7.2.2	Reaction rates in the laboratory	248
7.2.3	Reaction rates in stellar environments	249
7.2.4	Photons	250
7.2.5	Electrons	251
7.2.6	Other particles	251
7.2.7	Reaction networks	252
7.3	Astrophysical S-Factor	253
7.3.1	Charged particles: Non-resonant reactions . . .	254
7.3.2	Resonant reactions	262
7.3.3	Neutron-induced reactions	266
7.4	Environment Electrons	267
7.4.1	Stellar electron screening	268
7.4.2	Laboratory atomic screening	272
7.5	Reaction Models	273
7.5.1	Potential models	274
7.5.2	Microscopic models	282
7.5.3	\mathcal{R} -matrix theory	284
7.5.4	Statistical models	289
7.5.5	Beta-decay, electron capture and neutrinos . . .	291
7.5.6	Field theory models	298
7.6	Exercises	301
8.	Stellar Nucleosynthesis	307
8.1	Introduction	307
8.2	The Sun	308
8.2.1	Deuterium formation	309
8.2.2	Deuterium burning	311
8.2.3	^3He burning	313
8.2.4	Reactions involving ^7Be	313
8.2.5	The demise of the Sun	315
8.3	Massive Stars	316
8.3.1	The CNO cycle	316
8.3.2	Hot CNO and rp-process	318

8.3.3	Triple- α capture	319
8.3.4	Red giants	323
8.4	Advanced Burning Stages	325
8.4.1	Carbon burning	326
8.4.2	Neon burning	327
8.4.3	Oxygen burning	328
8.4.4	Silicon burning	328
8.5	Synthesis of Heavy Elements	329
8.5.1	The s-process	330
8.5.2	The r-process	332
8.5.3	Pycnonuclear reactions	335
8.6	Cataclysmic Events	337
8.6.1	Novae	337
8.6.2	X-ray bursts	339
8.6.3	Supernovae	341
8.6.4	Other cataclysmic events	353
8.7	Exercises	354
9.	The Big Bang	361
9.1	Introduction	361
9.2	In the Beginning	362
9.2.1	From elementary particles to nuclei	363
9.2.2	Space, particles, and their relation to time	366
9.3	Big Bang Timeline	369
9.3.1	Time $t = 0$	370
9.3.2	Inflation	370
9.3.3	$t \sim 0.01$ s	372
9.3.4	$t \sim 0.1$ s	372
9.3.5	Decoupling	375
9.3.6	$t \gtrsim 3$ min	378
9.3.7	$t \gtrsim$ years	379
9.4	BBN Nucleosynthesis	380
9.5	Cosmological Issues	384
9.5.1	Dark matter and dark energy	384
9.5.2	Inhomogeneous Big Bang	387
9.5.3	The horizon and the flatness problem	388
9.5.4	Matter–antimatter asymmetry in the universe	391

9.5.5	The demise of the universe	393
9.6	Exercises	395
10.	Rays	401
10.1	Introduction	401
10.2	Composition and Energy Distribution	402
10.2.1	Composition	402
10.2.2	Energy distribution	404
10.2.3	Propagation and origin	406
10.2.4	Scattering by cosmic background photons	409
10.3	Neutrinos	411
10.3.1	Neutrinos from the Sun	411
10.3.2	Neutrino oscillations	413
10.3.3	Atmospheric neutrinos	419
10.3.4	Supernova neutrinos	420
10.4	Gamma Rays	421
10.5	Exercises	423
A.	Units	427
A.1	Microscopic Units	427
A.1.1	Nuclear collisions	427
A.1.2	Collisions of atoms, ion or molecules	429
A.2	Constants and Conversion Factors	430
A.2.1	Constants	430
A.2.2	Masses	431
A.2.3	Conversion factors	431
A.3	Astronomical Units	431
A.3.1	Distances	431
A.3.2	Time	432
A.3.3	Masses	433
A.3.4	Luminosities, magnitudes	433
A.3.5	Temperatures and luminosities	434
B.	Space and Time	435
B.1	Introduction	435
B.2	Transformation between Moving Frames	435
B.2.1	Lorentz invariance	435
B.2.2	Minkowski space	437

B.2.3	Addition of velocities	438
B.2.4	Acceleration	443
B.3	Tensors	443
B.3.1	Definition	443
B.3.2	Metric tensor	445
B.4	Lorentz Group	447
B.4.1	Lorentz boost	448
B.4.2	Relativistic kinematics	450
B.4.3	Waves	451
B.4.4	Doppler effect	455
B.5	Four-Momentum	456
B.5.1	Energy–momentum of a particle	456
B.5.2	Particle collisions	459
C.	General Relativity	461
C.1	Christoffel Symbols	461
C.2	Metric Tensor	464
C.3	Riemann Curvature Tensor	466
C.4	The Energy–Momentum Tensor	467
C.5	Einstein Field Equations	469
D.	Riemann Geometry	475
D.1	Curved Spaces	476
D.1.1	Polar coordinates	476
D.1.2	Change of coordinates	477
D.1.3	Differential geometry	480
D.1.4	One dimensional curve	480
D.1.5	Two dimensional surface	483
D.1.6	Three dimensional hypersurface	486
D.2	The FRW Metric	489
D.2.1	Christoffel symbols	491
D.2.2	Ricci tensor	491
D.2.3	Ricci scalar and Einstein tensor	492
D.2.4	Energy–momentum tensor	493
D.2.5	Friedmann equation, again	493
E.	References	497
	Index	505
