<i>Preface</i>	vii
1. Introduction	1
<b>Quantum Mechanics</b>	<b>7</b>
2. Solutions to the Schrödinger Equation	9
2.1 The Schrödinger Equation and its Interpretation . . . . .	9
2.1.1 Postulates . . . . .	9
2.1.2 Boundary Conditions . . . . .	10
2.1.3 Stationary States . . . . .	12
2.1.3.1 Example: One-Dimension . . . . .	14
2.2 Simple Harmonic Oscillator . . . . .	17
2.2.1 Eigenfunctions and Eigenvalues . . . . .	19
2.2.2 Generating Function . . . . .	22
2.2.3 Raising and Lowering Operators . . . . .	28
2.2.4 Factorization Method . . . . .	31
2.3 Central-Force Problem . . . . .	34
2.3.1 Separation of Variables . . . . .	35
2.3.2 Azimuthal-Angle Equation . . . . .	35
2.3.3 Polar-Angle Equation . . . . .	37
2.3.4 Angular Momentum . . . . .	42
2.3.4.1 Eigenfunctions and Eigenvalues . . . . .	44
2.3.4.2 Hermiticity . . . . .	45
2.3.5 Radial Equation . . . . .	46

2.3.5.1	Free Particle with $V = 0$	47
2.3.5.2	Spherical Box with $V = -V_0$	50
2.3.5.3	Finite Square-Well Potential	52
2.4	Hydrogen Atom	54
2.4.1	Radial Equation	54
2.4.1.1	Confluent Hypergeometric Function	57
2.4.1.2	Boundary Conditions	58
2.4.1.3	Laguerre Polynomials	61
2.4.1.4	Normalization	63
2.4.1.5	Probability Density at the Origin	65
2.5	Periodic Potentials	65
2.5.1	Bloch's Theorem	66
2.5.2	Periodic Boundary Conditions	67
2.5.3	Kronig-Penney Model	69
2.5.3.1	Eigenvalues	72
2.5.3.2	Limiting Cases	74
3.	Formal Developments	77
3.1	Linear Vector Spaces	77
3.2	Hilbert Space	79
3.2.1	Direct Analogy	81
3.2.2	Abstract State Vector	81
3.3	Linear Hermitian Operators	82
3.3.1	Eigenstates	83
3.4	Matrix Mechanics	85
3.5	Eigenstates of Position	91
3.6	Abstract Hilbert Space	92
3.6.1	Inner Product	92
3.6.2	Completeness	93
3.6.3	Linear Hermitian Operators	94
3.6.4	Schrödinger Equation	95
3.7	Representations	98
3.7.1	Coordinate Representation	98
3.7.2	Momentum Representation	99
3.8	Operator Methods	101
3.8.1	Translation Operator	101
3.8.2	Inner Product $\langle \xi   k \rangle$	102
3.8.3	Simple Harmonic Oscillator	103
3.9	Pictures	107

3.9.1 Schrödinger Picture . . . . .	107
3.9.2 Unitary Transformations . . . . .	109
3.9.3 Heisenberg Picture . . . . .	109
3.9.4 Constants of the Motion . . . . .	110
3.10 Relation to Classical Mechanics . . . . .	110
3.10.1 Poisson Brackets . . . . .	111
3.11 Measurements . . . . .	113
3.11.1 Coordinate Space . . . . .	113
3.11.2 Abstract Form . . . . .	115
3.11.3 Reduction of the Wave Packet . . . . .	116
3.11.4 Stern-Gerlach Experiment . . . . .	117
3.11.5 Simultaneous Measurements and Compatible Observables . . . . .	119
3.12 Quantum Mechanics Postulates . . . . .	123

## Applications of Quantum Mechanics 125

4. Approximation Methods for Bound States	127
4.1 Variational Method . . . . .	127
4.1.1 Application: Ground State in Exponential Potential	132
4.2 Perturbation Theory . . . . .	135
4.2.1 Some Exact Results . . . . .	135
4.2.2 Non-Degenerate Perturbation Theory . . . . .	137
4.2.3 Degenerate Perturbation Theory—I . . . . .	139
4.2.4 Applications . . . . .	140
4.2.4.1 Oscillator with $H' = \beta x^2$ Perturbation . . . . .	140
4.2.4.2 Ground State of the He Atom . . . . .	142
4.2.4.3 Hydrogen Spectrum with Finite Nuclei . . . . .	148
4.2.4.4 Uniform Magnetic Field—Zeeman Effect . . . . .	153
4.2.4.5 Uniform Electric Field—Stark Effect . . . . .	157
4.2.5 Degenerate Perturbation Theory—II . . . . .	160
4.2.6 Application: Linear Stark Effect in Hydrogen . . . . .	162
5. Scattering Theory	169
5.1 Formulation of Problem . . . . .	169
5.1.1 Scattering Boundary Conditions . . . . .	170
5.1.2 Cross Section . . . . .	171
5.2 Scattering Green's Function . . . . .	174

5.3	Integral Equation . . . . .	177
5.4	Born's First Approximation . . . . .	179
5.4.1	Validity . . . . .	181
5.4.2	Applications . . . . .	182
5.4.2.1	Square-Well Potential . . . . .	183
5.4.2.2	Yukawa Potential . . . . .	185
5.4.2.3	Scattering of Charged Particles From Atoms	187
5.5	Higher-Order Born Approximations . . . . .	189
5.5.1	Diagrammatic Analysis . . . . .	189
5.6	Partial-Wave Analysis . . . . .	191
5.6.1	Two Formulae From Analysis . . . . .	191
5.6.2	Green's Function . . . . .	192
5.6.3	Separation of Variables in Scattering Equation . . . . .	195
5.6.4	Scattering Boundary Conditions . . . . .	197
5.6.5	Phase Shifts . . . . .	198
5.6.5.1	Born Approximation . . . . .	201
5.6.5.2	Long Wavelength . . . . .	202
5.6.6	Differential Equation . . . . .	203
5.6.6.1	Problem Solving . . . . .	205
5.6.6.2	Scattering from a Hard Sphere . . . . .	205
5.6.6.3	<i>S</i> -Wave Scattering from Attractive Square-Well . . . . .	207
5.6.7	Effective-Range Theory . . . . .	211
5.7	Phase Shift at High Energy—The WKB Approximation . . . . .	214
5.8	High-Energy Eikonal Approximation . . . . .	221
5.8.1	Integrated Elastic Cross Section . . . . .	227
5.8.2	Complex Potentials . . . . .	229
5.8.2.1	Example: Black Disc . . . . .	230
5.8.2.2	An Extension . . . . .	232
5.8.2.3	Applications . . . . .	232
5.9	Nuclear Reactions . . . . .	233
5.9.1	Reaction Cross Section . . . . .	234
5.9.2	Reactions with <i>S</i> -Wave Neutrons . . . . .	238
5.9.2.1	Model of Interior Behavior . . . . .	239
6.	Time-Dependent Perturbation Theory	245
6.1	General Analysis . . . . .	246
6.2	Dirac Perturbation Theory . . . . .	249
6.2.1	Example with $H_1(t)$ . . . . .	250

6.2.1.1	Inelastic Cross Section . . . . .	253
6.2.2	$H_1$ Independent of Time . . . . .	255
6.2.2.1	Particle in Continuum in Final State . . . . .	258
6.2.2.2	Relation to Previous Scattering Theory . . . . .	263
6.2.2.3	Scattering of Charged Lepton from Atom . . . . .	265
6.2.3	Interaction with External Electromagnetic Fields . . . . .	273
6.2.3.1	Formulation of Problem . . . . .	273
6.2.3.2	Gauge Invariance . . . . .	273
6.2.3.3	External Radiation Field . . . . .	275
6.2.3.4	Transition Rate . . . . .	277
6.2.3.5	Transition Matrix Element . . . . .	279
6.2.3.6	Cross Sections . . . . .	281
6.3	Higher-Order Perturbation Theory . . . . .	284
7.	Electromagnetic Radiation and Quantum Electrodynamics	287
7.1	Maxwell's Equations . . . . .	287
7.2	Gauges . . . . .	288
7.2.1	Lorentz Gauge . . . . .	289
7.2.2	Coulomb Gauge . . . . .	289
7.3	Free Radiation Field . . . . .	290
7.3.1	Coulomb Gauge . . . . .	290
7.3.2	General Expansion of $\mathbf{A}(\mathbf{x}, t)$ . . . . .	291
7.3.3	Energy in Field . . . . .	293
7.3.4	Quantization . . . . .	294
7.3.4.1	Quantum Mechanics . . . . .	296
7.3.4.2	Ehrenfest's Theorem . . . . .	296
7.3.4.3	Justification . . . . .	297
7.3.5	Momentum in Field . . . . .	298
7.3.6	Commutation Relations . . . . .	299
7.4	Quantum Electrodynamics . . . . .	300
7.4.1	Formulation of Problem . . . . .	300
7.4.2	Schrödinger Picture . . . . .	301
7.4.3	Justification . . . . .	302
7.4.3.1	Lorentz Force . . . . .	302
7.4.3.2	Maxwell's Equations . . . . .	303
7.4.3.3	Current Conservation . . . . .	306
7.4.4	Photoemission . . . . .	307
7.4.4.1	Transition Rate . . . . .	307
7.4.4.2	Comparison with Classical Result . . . . .	312

7.4.4.3	Dipole Approximation . . . . .	313
7.4.4.4	Average Over Initial States . . . . .	316
7.4.4.5	Example: $2p \rightarrow 1s$ Transition in H-Like Atom	318
7.4.4.6	Lifetimes . . . . .	320
7.4.4.7	Dipole Sum Rule . . . . .	321
7.4.5	Planck Distribution Law . . . . .	323
7.4.6	Photoabsorption . . . . .	325
7.4.7	Wigner-Weisskopf Theory of Line Width . . . . .	326
7.4.7.1	Schrödinger Equation . . . . .	327
7.4.7.2	Formulation in Truncated Basis . . . . .	327
7.4.7.3	Solution . . . . .	328
<b>Relativistic Quantum Field Theory</b>		<b>333</b>
8.	Discrete Symmetries	335
8.1	Spin-Zero Field . . . . .	336
8.1.1	Parity . . . . .	336
8.1.2	Charge Conjugation . . . . .	339
8.1.3	Time Reversal . . . . .	341
8.1.4	Transformation Properties of the E-M Current . . . . .	343
8.2	Spin-1/2 Particles and Fields . . . . .	344
8.2.1	Parity . . . . .	345
8.2.2	Charge Conjugation . . . . .	347
8.2.3	Time Reversal . . . . .	348
8.2.4	Transformation Properties of the E-M Current . . . . .	350
8.2.5	Two-Particle Fermion-Antifermion States . . . . .	352
8.3	Spin-1 Field (Massless Photons) . . . . .	354
8.3.1	Two-Photon States in the C-M System . . . . .	356
8.3.2	Symmetry Properties of the Field . . . . .	357
8.3.2.1	Parity . . . . .	357
8.3.2.2	Charge Conjugation . . . . .	359
8.3.2.3	Time Reversal . . . . .	360
8.4	Selection Rules . . . . .	361
8.4.1	Some Examples . . . . .	361
8.5	Lorentz Transformations . . . . .	364
8.5.1	Spin-Zero Field . . . . .	364
8.5.2	Spin-1/2 Field . . . . .	365
8.5.3	Some Invariant Interactions . . . . .	366

8.6 The <i>CPT</i> Theorem . . . . .	367
8.6.1 Two Consequences . . . . .	371
9. Heisenberg Picture . . . . .	373
9.1 Change of Picture . . . . .	373
9.1.1 Schrödinger Picture . . . . .	373
9.1.2 Interaction Picture . . . . .	373
9.1.3 Heisenberg Picture . . . . .	375
9.1.3.1 Two Theorems . . . . .	377
9.1.3.2 Special Cases . . . . .	378
9.2 Properties of Heisenberg Operators and States . . . . .	380
9.2.1 Discrete Transformations . . . . .	380
9.2.2 Spectrum . . . . .	381
9.2.3 Continuous Transformations . . . . .	382
9.2.3.1 Translations . . . . .	382
9.2.3.2 Lorentz Transformations . . . . .	383
9.2.3.3 Isotopic Spin . . . . .	384
9.2.4 Notation . . . . .	384
9.3 Boson Propagator . . . . .	385
10. Feynman Rules for QCD . . . . .	387
10.1 Quantum Chromodynamics (QCD) . . . . .	387
10.1.1 Quark Fields . . . . .	387
10.1.2 Yang-Mills Theory Based on Color . . . . .	388
10.1.2.1 Local Gauge Invariance . . . . .	389
10.1.2.2 Electromagnetic Current Operator . . . . .	391
10.1.3 Lagrangian Density of QCD . . . . .	392
10.1.3.1 Equations of Motion . . . . .	393
10.1.3.2 Conserved Currents . . . . .	394
10.2 Feynman Rules for the S-matrix in QCD . . . . .	395
10.3 Derivation of Feynman Rules . . . . .	399
10.3.1 Review of Derivation for QED . . . . .	399
10.3.1.1 Generating Functional for Free Field . . . . .	399
10.3.1.2 Photon Propagator . . . . .	403
10.3.1.3 Generating Functional for QED . . . . .	404
10.3.2 Derivation for Quantum Chromodynamics (QCD) . . . . .	405
10.3.2.1 Lagrangian Density . . . . .	405
10.3.2.2 Gauge Fields Alone . . . . .	405

10.3.2.3 Generating Functional for QCD . . . . .	407
10.3.2.4 Feynman Rules . . . . .	407
<b>Problems and Appendices</b>	<b>409</b>
11. Problems	411
Appendix A The Two-Body Problem	447
A.1 Classical Mechanics . . . . .	447
A.2 Quantum Mechanics . . . . .	448
Appendix B Charged Particle in External Electromagnetic Field	451
B.1 Classical Theory . . . . .	451
B.2 Quantum Theory . . . . .	453
<i>Bibliography</i>	457
<i>Index</i>	461
