About the Author	xv

Section I Classical Diffusion

1 Introduction to Brownian Motion.....	3
1.1 Introductory Remarks	3
1.2 Fourier Equation	3
1.3 Random Walk	5
1.4 Random Walk on a Lattice and Its Continuum Limit	9
1.5 Einstein on Brownian Motion	11
1.5.1 Dressed Viscosity.....	11
1.5.2 Synergy of Thermodynamics and Kinetics	12
1.5.3 Brownian Motion and Stochastic Diffusion	14
1.6 Concluding Remarks	16
Exercises	16
References	16
2 Markov Processes	19
2.1 Genesis of Markov Concept.....	19
2.2 Definition.....	20
2.2.1 Joint and Conditional Probabilities	21
2.3 Stationary Markov Process	22
References	25
3 Gaussian Processes	27
3.1 Introduction	27
3.1.1 Moments and Cumulants	29
3.1.2 Characteristic Function.....	30
3.1.3 Cumulant Generating Function.....	31
3.2 Gaussian Stochastic Processes	32
3.2.1 Novikov Theorem.....	33
3.2.2 Moment Theorem	33
3.2.3 Characteristic Functional.....	34
3.3 Stationary Gauss–Markov Process	34
3.3.1 Doob’s Theorem	35
Exercises	37
References	38

4	Langevin Equations	39
4.1	Introduction	39
4.2	Free Particle in Momentum Space	40
4.3	Free Particle in Position Space	47
	4.3.1 High-Friction Brownian Regime	51
	4.3.2 Summary of Results	54
4.4	Harmonic Oscillator	55
4.5	Diffusive Cyclotron Motion	57
	Exercises	60
	References	60
5	Fokker–Planck Equation	61
5.1	Introduction	61
5.2	FP Equation in Velocity	62
5.3	FP Equation in Position: Stochastic Diffusion	63
5.4	FP Equation in Force Field: Kramers Equation	64
5.5	FP Equation in Force Field in High-Friction Limit: Smoluchowski Equation	66
5.6	FP Equation for Damped Harmonic Oscillator	67
5.7	FP Equation for Cyclotron Motion	68
5.8	Diffusion across Barrier	69
	Exercise	73
	References	73
6	Jump Diffusion	75
6.1	Introduction	75
6.2	Operator Notation	76
6.3	Two-State Jump and Telegraph Processes	79
6.4	Multi-State Jump Process	81
6.5	Kubo–Anderson Process	81
6.6	Interpolation Model	83
6.7	Kangaroo Process	84
	Exercises	88
	References	88
7	Random Walk and Anomalous Diffusion	89
7.1	Introduction to Continuous Time Random Walk (CTRW)	89
7.2	Non-Markovian Diffusion in CTRW Scheme	92
	7.2.1 Application to Interpolation Model	93
	7.2.2 Anomalous Diffusion	96
	References	97
8	Spectroscopic Structure Factor	99
8.1	Introductory Remarks	99
	8.2.1 Weak Collision Model: Gaussian Process	100

8.2.1.1	Very Slow Collisions	101
8.2.1.2	Very Fast Collisions.....	102
8.2.2	Strong Collision Model: Kubo–Anderson Process.....	102
8.2.2.1	No-Collision Term.....	103
8.2.2.2	One-Collision Term.....	103
8.2.2.3	Two-Collision Term.....	104
8.2.2.4	Very Slow Collisions	104
8.2.2.5	Very Fast Collisions.....	105
8.2.3	Boltzmann–Lorentz Model.....	106
8.2.3.1	No-Collision Term.....	107
8.2.3.2	One-Collision Term.....	107
8.3	Cyclotron Motion in Weak Collision and Boltzmann– Lorentz Models.....	109
8.3.1	Structure Factor in the Weak Collision Model	109
8.3.2	Structure Factor in the Boltzmann–Lorentz Model.....	111
8.4	Neutron Scattering from a Damped Harmonic Oscillator	114
8.5	Restricted Diffusion over Discrete Sites	115
8.5.1	Two-Site Case.....	115
8.5.2	Cage Diffusion.....	118
8.6	Unbounded Jump Diffusion in Empty Lattice	121
8.6.1	Large Jumps in Random Directions.....	123
8.6.2	Small Jumps in Random Directions.....	123
8.7	Vacancy-Assisted Correlated Diffusion in Solids	124
8.7.1	Analytical Results in a Simple Cubic (SC) Case	130
	Appendix	135
	References	139
9	Rotational Diffusion of Molecules	141
9.1	Introduction	141
9.2	Extended Diffusion Models.....	144
9.3	M Diffusion Model	146
9.3.1	No-Collision Term	147
9.3.2	One-Collision Term	148
9.4	J Diffusion Model.....	149
9.4.1	No-Collision Term	150
9.4.2	One-Collision Term	150
9.5	Interpolation Model.....	151
9.5.1	No-Collision Term	151
9.5.2	One-Collision Term	151
9.5.3	Two-Collision Term	152
9.6	Applications to Infrared and Raman Rotational Spectroscopy	155
	References	159

10 Order Parameter Diffusion	161
10.1 Cahn–Hilliard Equation	161
10.2 Pattern Formation	165
10.3 Jump Diffusion in Ising Model: Relation with CH Equation	168
10.4 Reaction–Diffusion Models and Spatiotemporal Patterns.....	173
References	180
11 Diffusion of Rapidly Driven Systems	181
11.1 Introduction	181
11.2 Langevin Equation in Over-Damped Case.....	184
11.2.1 Dynamical Symmetry Breaking.....	185
11.2.2 Decay of Metastable State	186
11.3 Langevin Equation for Arbitrary Damping.....	187
11.4 Effective Diffusion in Periodic Potential	190
References	192

Section II Quantum Diffusion

12 Quantum Langevin Equations	195
12.1 Introduction	195
12.2 Derivation of the Classical Langevin Equation.....	197
12.2.1 Ohmic Dissipation	200
12.3 Quantum Generalization.....	202
12.4 Free Particle.....	203
12.5 Diffusive Quantum Cyclotron Motion	204
12.6 Diffusive Landau Diamagnetism	208
References	213
13 Path Integral Treatment of Quantum Diffusion	215
13.1 Introduction	215
13.2 Basic Model.....	217
13.3 Ohmic Dissipation and Classical Limit	219
13.4 Master Equation in High-Temperature Limit	221
13.5 Application to Dissipative Diamagnetism	222
References	226
14 Quantum Continuous Time Random Walk Model	227
14.1 Introduction.....	227
14.2 Formulation.....	228
14.2.1 Zero-Collision Term	229
14.2.2 One-Collision Term	229
14.2.3 Two-Collision Term	230

14.3	Applications.....	231
14.3.1	Quantum Harmonic Oscillator.....	231
14.3.2	Spin Relaxation.....	233
14.4	Finite Temperature Effects.....	234
14.4.1	Relaxation of the Harmonic Oscillator at Finite Temperatures.....	234
14.4.2	Phase Space Dynamics and Free Particle Limit.....	236
14.4.3	Spin Relaxation at Finite Temperatures: Bloch– Redfield Equations.....	236
	References.....	237
15	Quantum Jump Models.....	239
15.1	Introduction.....	239
15.1.1	Spin Lattice Relaxation in Solids.....	240
15.1.2	Quantum Tunneling in Symmetric Double Well.....	240
15.1.3	Tunneling in Asymmetric Double Well.....	241
15.1.4	Dephasing of Qubit.....	241
15.2	Formalism.....	242
15.2.1	Cumulant Expansion.....	242
15.2.2	Resolvent Expansion.....	248
15.3	Polaronic Transformation.....	249
15.3.1	Asymmetric Spin Boson Model.....	251
15.4	Qubit.....	255
15.5	Neutron Structure Factor for H Diffusion in Metals.....	259
15.6	Spin Relaxation of Muon Diffusion in Metals.....	262
	References.....	264
16	Quantum Diffusion: Decoherence and Localization.....	265
16.1	Introductory Comments.....	265
16.2	Landau to Bohr–van Leeuwen Transition of Diamagnetism.....	267
16.3	Harmonic Oscillator in Quantum Diffusive Regime.....	269
16.4	Decoherence in Spin Boson Model.....	271
16.5	Dissipationless Decoherence.....	271
16.6	Retrieving Quantum Information Despite Decoherence.....	275
16.7	Localization of Electronic States in Disordered Systems.....	279
	References.....	282
	Index.....	283
