

Contents

Part I Theoretical Foundations

1 Elements of Probability Theory	3
1.1 Random Variables and Probability	3
1.2 Moments and the Characteristic Function.....	6
1.3 Well-Known Probability Distributions	8
1.3.1 Normal Distribution	8
1.3.2 Exponential Distribution	9
1.3.3 Uniform Distribution.....	10
1.3.4 Cauchy Distribution.....	11
1.3.5 Lévy Distribution	11
1.3.6 Dirac Delta Distribution	12
1.3.7 Poisson Distribution.....	12
1.3.8 Binomial Distribution	13
1.4 Multivariate Distributions	14
1.4.1 Conditional Probabilities	15
1.4.2 Correlation and Covariance.....	16
1.5 The Central Limit Theorem	17
1.6 Convolution Theorems	18
References	21
2 Introduction to Stochastic Processes	23
2.1 Fluctuations and Non-determinism	23
2.2 Noise	24
2.3 Stochastic Process	28
2.4 Markov Process.....	30
2.4.1 Gaussian Process	31
2.4.2 Wiener Process	32
2.4.3 Poisson Process	34
2.5 Microscopic Description of Stochastic Processes.....	35
2.5.1 Stochastic Differential Equations	35

2.6	Mesoscopic Description of Stochastic Processes	40
2.6.1	Chapman-Kolmogorov Equation	40
2.7	Macroscopic Description of Stochastic Processes	43
2.7.1	The Master Equation	43
2.7.2	The Fokker-Planck Equation	48
2.8	Summary: Micro, Meso and Macroscopic Descriptions of a Stochastic Process	56
	References	59

Part II Stochastic Modelling for Dispersal and Movement

3	Microscopic, Mesoscopic and Macroscopic Descriptions of Dispersal	63
3.1	The Diffusion Equation	65
3.1.1	Macroscopic Derivation	66
3.1.2	Mesoscopic Derivation.....	70
3.1.3	Microscopic Derivation: Langevin's Approach.....	72
3.1.4	Fundamental Solution and Statistics	75
3.1.5	Pathologies of the Diffusion Equation	77
3.2	Persistent Motion	78
3.2.1	The Telegrapher's Equation.....	78
3.2.2	Langevin Approach to Persistent Motion	84
3.3	Intermittent Motion.....	87
3.3.1	Combination of Diffusion with Pauses	88
3.3.2	Combination of Diffusion with Ballistic Displacements *	92
3.4	Externally-Directed Movement	94
3.4.1	Chemotaxis	94
3.4.2	Animal Grouping *	96
3.5	Dispersal in Two and Three Dimensions	102
3.5.1	Diffusion Equations in Two and Three Dimensions	103
3.5.2	Correlated Dispersal and Turn Angle Distributions	105
	References	109
4	Anomalous Diffusion and Continuous-Time Random Walks	113
4.1	What Does <i>Anomalous</i> Mean?.....	113
4.2	General Mechanisms of Anomalous Diffusion	115
4.2.1	Long-Range Correlations	116
4.2.2	Non-identical Displacements	118
4.2.3	Displacements with Non-finite Mean or Variance	119
4.3	Diffusion on Fractals	121
4.4	Lévy Flights and Lévy Walks	124
4.5	Continuous-Time Random Walks	127
4.5.1	Random Jump Lengths: Position of a Random Walk	127
4.5.2	Random Waiting Times	129

4.5.3	Formulation of Continuous-Time Random Walks	131
4.5.4	CTRWs and Anomalous Diffusion *	135
4.5.5	Macroscopic Limit *	137
4.5.6	Large Waiting Times and Subdiffusion *	139
4.5.7	Large Distance Jumps and Superdiffusion *	140
4.6	Random Velocity Models	141
4.6.1	Velocity Models and Anomalous Diffusion *	144
	References	146
5	Reaction-Dispersal Models and Front Propagation	149
5.1	Reaction-Diffusion	150
5.2	Reaction-Telegrapher's Equation	152
5.3	Reaction-Correlated Random Walks	153
5.4	Reaction-Dispersal Models	155
5.4.1	Discrete-Time Models	155
5.4.2	Continuous-Time Models *	156
5.4.3	Including Life Statistics	158
5.5	Front Propagation	160
5.5.1	Determination of the Front Speed	162
5.5.2	Reaction-Diffusion Fronts	163
5.5.3	Reaction-Dispersal Fronts *	167
	References	175
6	Random Search Strategies	177
6.1	Mean First-Passage Time	180
6.1.1	Diffusion	180
6.1.2	Persistent Motion	183
6.1.3	Intermittent Searches	186
6.2	Selective Target Detection	190
6.3	The Extensive-Intensive Search Tradeoff	194
	References	203
Part III Selected Applications		
7	Cell Motility	209
7.1	Key Physical Factors of Cell Motion	210
7.1.1	Motion Mechanisms	210
7.1.2	Substrate and Cell Density	211
7.1.3	Size	212
7.1.4	Shape	213
7.2	Analysis of Individual Cell Trajectories	213
7.2.1	Velocity Distributions	214
7.2.2	Velocity Correlations	216
7.2.3	Mean Square Displacement	216
7.2.4	Kurtosis	218
7.2.5	Turn Angle Distributions	219

7.2.6	Angle Correlations	220
7.2.7	Run and Tumble	221
7.3	Microscopic Descriptions of Cell Motility	222
7.3.1	The OU Process and Its Extensions	222
7.3.2	Passing to the Cell's Frame of Reference *	226
7.4	Mesoscopic Descriptions of Cell Motility.....	229
7.4.1	Run and Tumble with Turn Angle Distributions *	230
7.4.2	The Velocity Jump Model *	232
7.4.3	Two-Dimensional Random Velocity Models *	234
7.5	Summary: Cell Motion and Superdiffusion	237
	References	241
8	Biological Invasions	245
8.1	Estimating Dispersal Kernels and Diffusion Coefficients from Data	246
8.1.1	Non-parametric Estimator from 1D Dispersal Data	248
8.1.2	Non-parametric Estimator from 1D Density Data	249
8.1.3	Non-parametric Estimator from 2D Dispersal Data	250
8.1.4	Non-parametric Estimator from 2D Density Data	250
8.1.5	Estimation of the Diffusion Coefficient	251
8.2	Estimating the Waiting-Time PDF and the Intrinsic Growth Rate from Data	252
8.2.1	Non-parametric Estimator from Life-Tables	252
8.3	Case Examples.....	253
8.3.1	House-Finch Invasion	253
8.3.2	Muskrat Invasion	255
8.3.3	Sea Otter Invasion	257
8.3.4	Grey Squirrel Invasion	259
8.4	Age-Structured Models and Plant Invasions	261
