<i>Preface</i>	<i>page ix</i>
<b>1 Introduction and overview</b>	<b>1</b>
1.1 Elementary particle physics	1
1.2 The fundamental constituents of matter and their interactions	1
1.3 A new paradigm for the structure of matter	3
1.4 The particle zoo	4
1.5 The first high $p_T$ physics, the search for the $W$ boson	5
1.6 From Bjorken scaling to QCD to the QGP	7
1.7 Relativistic heavy ion collisions and the QGP	8
1.8 High energy physics and techniques in the RHI physicist's toolkit	10
<b>2 Basic observables</b>	<b>14</b>
2.1 Observables	14
2.2 Inclusive single particle reactions	17
2.3 Semi-inclusive reactions – $E_T$ and multiplicity distributions	25
<b>3 Some experimental techniques</b>	<b>28</b>
3.1 Relation of observables to experimental techniques	28
3.2 Some details of experimental technique and analysis	29
3.3 Measurement of the momentum of a charged particle	36
3.4 Lorentz transformations, kinematics, spectra of decay products	42
3.5 Methods of direct single photon measurements	61
<b>4 The search for structure</b>	<b>64</b>
4.1 Rutherford scattering	64
4.2 Hofstadter – measurement of radii of nuclei and the proton	68
4.3 DIS – deeply inelastic electron scattering	73
4.4 Sum rules, Bjorken scaling and the parton model	80

<b>5</b>	<b>Origins of high <math>p_T</math> physics – the search for the <math>W</math> boson</b>	85
5.1	Why were some people studying “high $p_T$ ” physics in the 1960s?	85
5.2	The absence of high $p_T$ single leptons leads to lepton pair measurements	88
5.3	The November revolution	91
<b>6</b>	<b>Discovery of hard scattering in <math>p</math>–<math>p</math> collisions</b>	93
6.1	Bjorken scaling and the parton model in $p$ – $p$ collisions	101
6.2	ISR data, notably CCR 1972–1973	103
6.3	Constituent interchange model (CIM), 1972	103
6.4	First prediction using “QCD” 1975 – WRONG!	104
6.5	Experimental improvements, theoretical improvements	105
6.6	State of the art at Fermilab 1977 – but misleading!	106
<b>7</b>	<b>Direct single lepton production and the discovery of charm</b>	111
7.1	The CCRS experiment at the CERN-ISR	111
7.2	Experimental issues in direct single lepton production	112
7.3	The discovery of direct single lepton production	116
7.4	The direct single electrons are the first observation of charm	116
<b>8</b>	<b><math>J/\Psi</math>, <math>\Upsilon</math> and Drell–Yan pair production</b>	126
8.1	Di-lepton production in the parton model: Drell–Yan pairs	126
8.2	$J/\Psi$ production	127
8.3	Are $J/\Psi$ and $\Upsilon$ production due to hard scattering?	140
8.4	Measurements of Drell–Yan pair production	142
<b>9</b>	<b>Two particle correlations</b>	147
9.1	Hard scattering in the parton model	147
9.2	Two particle correlation measurements	150
9.3	Same-side and spectator region measurements	162
9.4	Early direct searches for jets, isotropy of $j_T$	165
9.5	Symmetric di-hadron cross sections	169
9.6	Measurement of $d\sigma^{ab\rightarrow cd}/d\cos\theta^*$ for parton–parton scattering	171
<b>10</b>	<b>Direct photon production</b>	174
<b>11</b>	<b>The search for jets</b>	190
11.1	Origins of $E_T$ – the search for jets	190
11.2	Does history provide a guide for the future?	200
11.3	The systematics of transverse energy emission in $p$ – $p$ and $p$ – $\bar{p}$ collisions	201
11.4	The use of $E_T$ distributions in $p$ – $p$ collisions: the study of jets	206
11.5	Experimental issues	212

<b>12 QCD in hard scattering</b>	214
12.1 Status of theory and experiment circa 1982	214
12.2 Jets since 1982	214
12.3 The factorization theorem for pQCD	217
12.4 Parton distribution and fragmentation functions	219
12.5 Parton distribution functions and fragmentation functions in nuclei	226
12.6 Elements of QCD for experimentalists	229
12.7 Explicit tests of QCD: $\alpha_s(Q^2)$ , $\Sigma^{ab}(\cos^*)$	231
12.8 $x_T$ scaling	237
<b>13 Heavy ion physics in the high <math>p_T</math> era</b>	244
13.1 Relativistic heavy ion collisions and dense nuclear matter	244
13.2 Experimental issues in $A + A$ compared to $p-p$ collisions	246
<b>14 RHIC and LHC</b>	254
14.1 The road to RHIC	254
14.2 Proposals for experiments	259
14.3 Hard scattering at RHIC	263
14.4 Hard scattering at the LHC	293
14.5 Conclusion	300
<b>Appendix A Probability and statistics</b>	302
<b>Appendix B Methods of Monte Carlo calculations</b>	318
<b>Appendix C <math>T_{AB}</math> and the Glauber Monte Carlo calculation</b>	333
<b>Appendix D Fits including systematic errors</b>	336
<b>Appendix E The shape of the <math>x_E</math> distribution triggered by a jet fragment, for example, <math>\pi^0</math></b>	348
<b>Appendix F <math>k_T</math> phenomenology and Gaussian smearing</b>	357
References	360
