

Acronyms, Abbreviations and Symbols	xxi	4. Branching β^- , β^+ , and EC Decay	60
Foreword to the Third Edition	xxxv	5. Double-Beta ($\beta\beta$) Decay	62
Preface to the Third Edition	xxxvii	6. Beta-particle Interactions with Matter	65
		7. Beta-particle Absorption and Transmission	67
1. Radiation Physics and Radionuclide Decay		C. Internal Conversion Electrons	68
I. Introduction	2	D. Auger Electrons	70
II. Discovery and Early Characterization of Radioactivity	2	E. Neutron Radiation	72
III. Basic Units and Definitions	13	1. Discovery of the Neutron	72
A. Properties of Atomic Constituents	13	2. Neutron Classification	73
B. Nuclides, Isotopes, Isobars, Isomers, and Isotones	13	3. Sources of Neutrons	76
C. Mass and Energy	14	4. Interactions of Neutrons with Matter	84
IV. Properties of the Nucleus	16	5. Neutron Attenuation and Cross Sections	87
A. Nuclear Radius and Density	16	6. Neutron Decay	90
B. Nuclear Forces	17	IX. Electromagnetic Radiation – Photons	90
C. Binding Energy	19	A. Dual Nature: Wave and Particle	90
1. Nuclear Fission	21	B. Gamma Radiation	92
2. Nuclear Fusion	21	C. Annihilation Radiation	94
D. Nuclear Models	23	D. X-Radiation	94
1. Liquid Drop Model	23	1. X-rays Characterized by Discrete Spectral Lines	95
2. Shell Model	26	2. Bremsstrahlung	97
3. Collective Model	29	3. X-rays from Beta-particle Emissions	101
E. Cluster Radioactivity	31	E. Cherenkov Radiation	102
V. Naturally Occurring Radionuclides	32	X. Interaction of Electromagnetic Radiation with Matter	105
A. Radionuclides of Cosmogenic Origin	32	A. Photoelectric Effect	105
B. Long-lived Radionuclides	32	B. Compton Effect	105
C. Natural Radioactive Decay Chains	33	C. Pair Production	107
VI. Artificially Produced Radionuclides	33	D. Combined Photon Interactions	109
VII. Nuclear Reactions	37	XI. Radioactive Nuclear Recoil	113
A. Reactions Types	37	A. Relativistic Expressions	114
B. Notation	39	B. Nonrelativistic Expressions	115
C. Energy of Reactions (Q Value)	39	1. Nuclear Recoil Energy from Alpha-particle Emissions	115
D. Reaction Cross Section	41	2. Nuclear Recoil Energy from Gamma-ray, X-ray, and Neutrino Emissions	116
VIII. Particulate Radiation	42	C. Sample Calculations	116
A. Alpha Decay	42	1. Nuclear Recoil from Alpha Emissions	116
1. Energy and Half-life Relationship	42	2. Nuclear Recoil from Beta Emissions	116
2. Decay Energy	43	3. Nuclear Recoil from Gamma-ray Photon, X-ray Photon, or Neutrino Emissions	117
3. Alpha-particle Interactions with Matter	45		
B. Beta Decay	49		
1. Negatron (β^-) Emission	49		
2. Positron (β^+) Emission	54		
3. Electron Capture (EC)	57		

D. Radioactive Recoil Effects	118	1. High-Resolution Gamma-Spectra	179
1. Szilard–Chalmers Process	118	2. Low-Resolution Gamma-Spectra	182
2. Radioactive Disequilibrium	120	VII. Metrology Applications	183
XII. Cosmic Radiation	120	A. Uncertainty Budget	183
A. Classification and Properties	121	B. Uncertainty Calculation	184
B. Showers of the Cosmic Radiation	123	1. Uncertainty Transmission in	
C. Cosmic Rays, Underground	127	Eqn (2.109)	184
D. Origins of Cosmic Radiation	128	2. Numerical Calculation of Uncertainty	186
XIII. Radiation Dose	128	References	188
XIV. Stopping Power and Linear Energy		Relevant Statistical References Tables	189
Transfer	130	3. Gas Ionization Detectors	
A. Stopping Power	130	I. Introduction: Principles of Radiation	
B. Linear Energy Transfer	133	Detection by Gas Ionization	191
XV. Radionuclide Decay, Ingrowth,		II. Characterization of Gas Ionization	
and Equilibrium	135	Detectors	192
A. Half-Life	135	A. Ion Chambers	192
B. General Decay Equations	141	B. Proportional Counters	193
C. Secular Equilibrium	141	C. Geiger–Müller Counters	193
D. Transient Equilibrium	143	III. Definition of Operating Characteristics of	
E. No Equilibrium	145	Gas Ionization Detectors	193
F. More Complex Decay Schemes	145	A. Counting Efficiency	194
XVI. Radioactivity Units and Radionuclide Mass	146	B. Energy Resolution	194
A. Units of Radioactivity	146	C. Resolving Time	194
B. Correlation of Radioactivity and		D. Localization	194
Radionuclide Mass	147	IV. Ion Chambers	194
1. ³² P, half-life = 14.3 days	147	A. Operating Modes of Ion Chambers	195
2. ¹⁴ C, half-life = 5730 years	147	1. Ion Chambers Operating in the	
C. Carrier-Free Radionuclides	148	Current Mode	195
References	148	2. Charge Integration Ionization	
2. Radioactivity Counting Statistics		Chambers	195
I. Introduction	163	3. Pulse-Mode Ion Chambers	195
II. Statistical Distributions	164	B. Examples and Applications of Ion	
A. The Poisson Distribution	164	Chambers	195
B. The Gaussian Distribution	165	1. Calibration of Radioactive Sources	195
III. Analysis of a Sample of Results	167	2. Measurement of Gases	196
A. Best Estimate of the True Value	167	3. Frisch Grid Ion Chambers	196
B. Best Estimate of Precision	168	4. Radiation Spectroscopy with Ion	
C. Error Propagation	168	Chambers	197
D. Accuracy of the Mean Value	169	5. Electret Detectors	199
E. Combination of Measurements	170	6. Fission Chambers	199
F. The Statement of the Results	171	V. Proportional Gas Ionization Detectors	200
1. Combined Standard Uncertainty	171	A. Examples and Applications of Proportional	
2. Rules for Expressing Results	171	Counters	201
IV. Statistical Inference	172	1. Gross Alpha–Beta Counting, Alpha–	
A. Hypothesis Testing	172	Beta Discrimination, and Radiation	
B. Confidence Intervals	173	Spectroscopy Using Proportional Gas	
C. Statistical Inference	173	Ionization Counters	201
1. Variance of a Population	173	2. Position-Sensitive Proportional	
2. Variance of Two Populations	174	Counters	203
V. Regression	176	3. Low-Level Counting Techniques Using	
A. Linear Regression	176	Proportional Gas Ionization Detectors	209
1. Confidence Intervals and Hypothesis		4. Application in Environmental	
Testing	177	Monitoring, and Health Physics	210
VI. Detection Limits	177	VI. Geiger–Müller Counters	214
A. Critical Levels	177	A. Designs and Properties of Geiger–Müller	
B. Gamma-Spectra	179	Counters	214
		1. Fill Gas	214

2. Quenching	214	5. Applications of Proton Detection	247
3. Plateau	215	B. α -Particles	248
4. Applications	215	1. Suitable Detectors for α -particle	
VII. Special Types of Ionization Detectors	216	Measurements	248
A. Neutron Detectors	216	2. α -Intensity Measurements	248
1. BF ₃ Tube Construction	217	3. α -Particle Energy Measurements	250
2. Detectors for Fast Neutrons	218	4. α -Spatial Distribution Measurements	250
3. Neutron Counting in Nuclear Analysis of		5. Applications of α Detection	251
Fissile Materials and Radioactive Waste	220	C. Fission Fragments	251
4. Moisture Measurements	221	1. Suitable Detectors for Fission	
B. Multiple Sample Reading Systems	221	Fragments	252
C. Self-Powered Detectors	222	2. Fission Rate Determination	253
D. Self-Quenched Streamer	223	3. Spatial Distribution of Fission and	
E. Long-Range Alpha Detectors	223	Fission Fragments	254
F. Liquid Ionization and Proportional		4. Application of Fission Detection	254
Detectors	224	D. Heavy Ions ($Z \geq 3$)	254
G. Dynamic Random Access Memory		1. Suitable Detectors for Heavy Ions	
Devices (DRAM)	224	$Z \geq 3$	254
References	225	2. Identification of Charge Z	255
		3. Identification of Mass A of Isotopes	255
4. Solid-State Nuclear Track Detectors		4. Heavy-Ion Energy Determination	255
Part 1 Elements	234	5. Applications of Heavy-Ion Detection	255
I. Introduction	234	E. Neutrons	255
II. Detector Materials and Classification of		1. Principles of Neutron Detection	255
Solid-State Nuclear Track Detectors	236	2. Suitable Detectors for Neutron	
A. Crystalline Solids	236	Detection	256
1. Muscovite Mica	237	3. Neutron Intensity Measurements	256
2. Apatite	237	4. Neutron Energy Measurements	256
3. Zircon	238	5. Neutron Dosimetry	256
4. Sphene	239	F. Exotic Particle Detection	257
5. Olivine	239	1. Suitable Detectors for Exotic Particle	
6. Pyroxene	239	Detection	257
7. Other Crystalline Solids	240	2. Magnetic Monopole Detection	257
B. Glasses	240	3. Dark Matter Particle Detection	258
1. Man-Made Glasses	240	IV. Track Formation Mechanisms and Criteria	258
2. Natural Glasses	241	A. Introduction	258
C. Plastics	241	B. Track Formation Mechanisms	258
1. CR-39 (Polyallyldiglycol carbonate,		1. Ion Explosion Spike for Inorganic	
PADC, PM-355, PM-500, PM-600)	241	Solids	258
2. Polycarbonate (PC, Lexan, Makrofol,		2. Chain Breaking Mechanism in High	
Taffak)	242	Polymers	258
3. Cellulose Nitrate (CN, LR-115, Daicell)	243	C. Criteria of Track Formation	259
4. Polyethylene Terephthalate (PET, Mylar,		1. Primary Ionization Rate Criterion	259
Cronar, Melinex, Lavsan, Terphane,		2. Restricted Energy Loss (REL) for	
Hostphan)	244	Plastic Track Detectors	260
5. CR-39–DAP Series	244	3. Energy Deposition Model (E_v)	260
6. Other New Track Detector		D. Extended and Transitional Criteria	261
Materials	245	1. Z_{eff}/β	261
III. Recordable Particles with Solid-State Nuclear		2. dE/dx Transitional Parameter	262
Track Detectors	245	V. Track Revelation	262
A. Protons	245	A. Chemical Etching (CE)	262
1. Suitable Detectors for Proton		1. Etching Condition	262
Detection	246	2. Track Etching Geometry	262
2. Proton Intensity Measurements	246	3. Critical Angle of Etching	263
3. Proton Energy Measurements	246	4. Techniques of Critical Angle Measurements	263
4. Proton Spatial Distribution		5. Track Etching Geometry	264
Measurements	247	6. New Progress in Track Etching	
		Geometry	264

B. Electrochemical Etching (ECE)	264	III. Earth and Planetary Sciences	280
C. Track Etching Kinetics	265	A. Fission Track Dating	280
1. Objectives and Required Parameters	265	1. Absolute Approach	280
2. Forward Calculation	266	2. Zeta Approach	282
3. Inverse Calculation	266	3. Continental Drift and Ocean-Bottom Spreading	283
VI. Particle Identification	266	4. Archaeology and Anthropology	283
A. Maximum Track Length Method	266	5. Tectonic Up-Lift Rate Determination	285
B. Track-Etch Rate Versus Radiation Damage Density Method	266	B. Geothermal Chronology	285
C. Track-Etch Rate Versus Residual Range Method	266	C. U and Oil Exploration and Earthquake Prediction	286
D. Track Diameter Method for Identification of Charge Z at High and Relativistic Energy	267	IV. Life and Environmental Sciences	286
E. Track Length Method for Identification of Charge Z at High and Relativistic Energy	269	A. Radiation Protection Dosimetry	286
VII. Track Fading and Annealing	269	1. Radon and Thoron Monitoring and Dosimetry	286
A. Track Fading and Annealing	269	2. Neutron Dosimetry	287
B. Mechanisms of Track Fading	269	B. Environmental Sciences	287
C. Arrhenius Diagram	269	1. Radioactive Fallout from Nuclear Accidents	287
D. Application of Track Fading and Annealing	270	2. Drainage Contamination of Nuclear Plants	289
1. Problems Resulting From Track Fading	270	V. NanoTechnology and Radiation Induced Material Modifications	289
2. Improving Analysis with the Aid of Track Annealing	270	Acknowledgments	289
3. Apparent Fission Track Age and Its Corrections	270	References	289
4. Geothermal Chronology	271	5. Semiconductor Detectors	
VIII. Instrumentation	271	I. Introduction	299
A. Size of Latent Tracks and Etched Tracks	271	A. The Gas-Filled Ionization Chamber	299
B. Optical Microscope	271	B. The Semiconductor Detector	300
C. Track Image Analyzer	271	C. Fundamental Differences Between Ge and Si Detectors	301
D. Electron Microscope	271	1. The Energy Gap	301
E. Scanning Tunneling Microscope (STM) and Atomic Force Microscope (AFM)	271	2. The Atomic Number	301
F. Spark Counter	272	3. The Purity or Resistivity of the Semiconductor Material	303
		4. Charge Carrier Lifetime τ	303
Part 2 Applications	272	II. Ge Detectors	303
I. Introduction	272	A. High-Purity Ge Detectors: Merits and Limitations	303
II. Physical Sciences and Nuclear Technology	272	B. Analysis of Typical γ Spectra	305
A. Cluster Radioactivities	273	1. Spectrum of a Source Emitting a Single γ ray with $E_\gamma < 1022$ keV	305
B. Heavy-Ion Interactions	273	2. Spectrum of a Multiple- γ -Ray Source Emitting at Least One γ -ray with an Energy ≥ 1022 keV	307
1. Relativistic Projectile Fragmentation	273	3. Peak Summation	308
2. Sequential Fission after Inelastic Collisions	273	4. True Coincidence Summing Effects	309
C. Nuclear Fission and Neutron Physics	273	5. Ge-Escape Peaks	312
1. Nuclear Fission	273	C. Standard Characteristics of Ge Detectors	312
2. Neutron Physics	275	1. Energy Resolution	312
D. Plasma Physics	275	2. The Peak-to-Compton Ratio	315
1. Laser Acceleration	275	3. The Detector Efficiency	315
2. Inertial-Confinement-Fusion	276	D. Background and Background Reduction	319
E. Astrophysics and Cosmic Rays	276	1. Background in the Presence of a Source	319
F. Nuclear Technology	277		
1. Nuclear Reactor Physics	277		
2. Accelerator – Driven Subcritical Reactors (ADS)	278		
3. Nuclear Forensic Analysis and Nuclear Safeguards	278		
G. Elemental Analysis and Mapping	280		

2. Background in the Absence of the Source	319	B. Counting Efficiency	388
3. Background of Cosmic Origin	326	C. Background and Contamination in Alpha Spectrometry	389
4. Background Reduction	326	D. Stability of the Alpha Spectrometer	390
E. The Choice of a Detector	331	V. Radiochemical Processing	390
1. General Criteria	331	A. Sample Preparation and Pretreatment	394
2. Increasing the size of HPGe detectors	331	1. Preparation of Solid Samples	394
3. The Germanium Well-Type Detector	332	2. Preconcentration of Liquid Samples and Sample Solutions	394
4. Limitations to the “Relative Efficiency” quoted for Coaxial Detectors	332	B. Chemical Separation	396
5. The Broad Energy Germanium, or “BEGe” detector	333	1. Separations by Liquid–liquid Extraction (LLE)	396
III. Si Detectors	334	2. Separations by Ion Exchange	399
A. Si(Li) X-Ray Detectors	334	3. Separations by Extraction Chromatography (EC)	401
B. Si-Charged Particle Detectors	334	C. Alpha Source Preparation	409
1. Alpha Detectors	335	VI. Determination of Alpha Activity and Recovery	409
2. The Si Drift Detector (SDD) technology	338	A. Calibration	410
3. Electron Spectroscopy and β -Counting	339	B. Measurement Procedure	410
4. Readout of scintillators	339	C. Alpha Spectrum Evaluation	411
5. Continuous Air Monitoring	340	1. Principle of Evaluation	411
IV. Spectroscopic Analyses with Semiconductor Detectors	342	2. Nuclide Identification	411
A. Sample Preparation	343	3. Peak Area Determination for Nonoverlapping Peaks	411
1. Sample Preparation for Alpha Spectrometry	343	4. Peak Area Determination with Correction for Overlapping Peaks	411
2. Sample Preparation for Gamma Spectrometry	350	5. Calculation of Results	412
B. Analysis – Analytical Considerations	351	6. Calculation of the Combined Standard Uncertainty	413
1. Analytical Considerations in Alpha Spectrometry	351	7. Calculation of the Decision Threshold and the Detection Limit	414
2. Analytical Considerations in Gamma Spectrometry	353	VII. Quality Control	415
References	360	A. Quality Control for Alpha Spectrometers	415
