

CONTENTS

Introduction	1
1 A century of the hydrogen bond (H-bond)	6
1.1 The discovery of the H-bond	6
1.2 The theoretical understanding of the H-bond	7
1.3 The experimental approach to the H-bond	13
1.4 Significant books and reviews	19
2 Generalities, definitions and preliminary classification	23
2.1 Basic H-bond nomenclature	23
2.2 Formal H-bond definitions	23
2.3 The H-bond as a shared-proton interaction: A chemical classification	28
2.4 H-bonds involving main-group elements (Class 1)	30
2.4.1 Conventional H-bonds (Group 1.1)	31
2.4.2 Weak H-bonds: General properties (Groups 1.2–4)	32
2.4.2.1 Treatment of H...A contact distances	35
2.4.2.2 H-bond directionality	36
2.4.2.3 Importance of crystal-packing patterns	38
2.4.3 Weak H-bond donors (Group 1.2)	38
2.4.3.1 C–H... bonds	40
2.4.3.2 S–H... bonds	42
2.4.3.3 P–H... bonds	42
2.4.3.4 Si–H, As–H and Se–H... bonds	43
2.4.4 Weak H-bond acceptors (Group 1.3)	44
2.4.4.1 C–Hal (Hal = F, Cl, Br) as acceptors	44
2.4.4.2 S, Se and Te as acceptors	44
2.4.4.3 P, As and Sb as acceptors	45
2.4.4.4 C as acceptor	46
2.4.5 Weak π -acceptors (Group 1.4)	47
2.5 H-bonds involving metal centers (Class 2)	49
2.5.1 Metals as H-bond donors (Group 2.1)	50
2.5.2 Metals as H-bond acceptors (Group 2.2)	53
2.5.3 Metal hydrides as H-bond acceptors or dihydrogen bond (DHB) (Group 2.3)	53
2.5.3.1 DHB to main-group hydrides	54
2.5.3.2 DHB to transition-metal hydrides	56
2.5.4 Metal ligands as H-bond donors or acceptors (Groups 2.4–5)	56

2.6	H-bond classification by physical properties: Weak, moderate, and strong H-bonds	59
2.7	Correlation among physical descriptors: The problem of the driving variable	60
3	Modelling the H-bond by crystallographic methods	65
3.1	Crystallographic databases and structural correlations	65
3.1.1	A survey of structural databases	65
3.1.2	Crystal-structure correlation (CSC) methods	68
3.1.3	Bond lengths, bond energies and bond-number conservation rule	71
3.1.3.1	Bond lengths, energies and numbers	71
3.1.3.2	Bond-number conservation rule	72
3.1.3.3	The Lippincott and Schroeder H-bond model (LS-HB)	75
3.2	A new class of H-bonds: The resonance-assisted H-bond (RAHB)	81
3.2.1	Cooperative H-bonds: An introduction	81
3.2.2	Evidence for RAHB from CSC studies of β -diketone enols	84
3.2.2.1	A survey of CSC results	84
3.2.2.2	RAHB interpretation: The ionic model	89
3.2.2.3	RAHB interpretation: The resonant model	91
3.2.2.4	Appendix 3A: RAHB as a cybernetic effector	100
3.2.2.5	Appendix 3B: RAHB as a state-correlation diagram	100
3.2.2.6	Appendix 3C: RAHB electron effective-mass model	103
3.2.3	RAHB generalization and systematics	108
3.2.3.1	RAHB generalization	108
3.2.3.2	Intra- and intermolecular O–H...O RAHB	111
3.2.3.3	Intramolecular N–H...N RAHB	121
3.2.3.4	Heteronuclear X–H...Y RAHB	122
3.3	Completing the H-bond classification: The chemical leitmotifs	147
3.3.1	A full H-bond classification from the systematic analysis of the O–H...O system	147
3.3.1.1	A full CSD analysis of the O–H...O system	147
3.3.1.2	Interpreting the O–H...O system: The electrostatic-covalent H-bond model	155
3.3.1.3	Interpreting the O–H...O system: The PA/p K_a equalization principle	159
3.3.2	CAHB generalization to other homonuclear X–H...X bonds	161
3.3.3	CAHB generalization to heteronuclear X–H...Y bonds	163

3.3.4	CAHB geometry–energy relationships	163
4	Modelling the H-bond by thermodynamic methods	168
4.1	Introduction	168
4.2	The use of Δ PA and Δ p K_a indicators in H-bond studies	168
4.2.1	PA and p K_a definitions	168
4.2.2	Proton-transfer and proton-sharing H-bonds	170
4.2.3	Computing Δ PA and Δ p K_a values: The problem of Δ PA evaluation	171
4.2.4	The use of PA and p K_a as predictors of the H-bond strength: A summary	173
4.3	Predicting (–)CAHB and (+)CAHB strengths from enthalpy versus proton affinity correlations	174
4.3.1	$\Delta H^\circ_{\text{DIS}}$ against Δ PA correlations	174
4.3.2	A verification of the PA equalization principle	175
4.4	Predicting H-bond strengths from crystal geometry versus p K_a correlations	177
4.4.1	p K_a tables for the most common H-bond donors and acceptors	177
4.4.2	The p K_a slide rule	177
4.4.3	Two projects for validating the p K_a equalization principle	180
4.4.3.1	First project. p K_a equalization in CAHBs with Δ p K_a near zero	180
4.4.3.2	Second project. p K_a equalization in the N–H...O/O–H...N system	181
4.4.3.3	Conclusions	183
4.5	Appendix. p K_a tables arranged for chemical functionality	184
5	The empirical laws governing the H-bond: A summary	193
5.1	Summary of chemical leitmotifs (CLs): The three main classes of H-bonds	193
5.2	Summary of VB methods: The electrostatic-covalent H-bond model (ECHBM)	196
5.3	Summary of the PA/p K_a equalization principle	199
5.4	On the chemical nature of the H-bond	200
6	Outline of a novel transition-state H-bond theory (TSHBT)	203
6.1	Empirical laws, models and scientific theories: An introduction	203
6.2	A new way of looking at the H-bond: The TSHBT	206
6.2.1	Introduction	206
6.2.2	Criteria for the choice of a suitable PT reaction	206
6.3	A practical verification of the TSHBT	208
6.3.1	A suitable reaction: The ketohydrazone \rightleftharpoons azoenol system	208

6.3.2	Methods of study	208
6.3.3	Analysis of crystallographic results	210
6.3.4	DFT emulation	211
6.3.5	Marcus analysis of DFT data	213
6.3.6	Conclusions	220
7	The strength of the H-bond: Definitions and thermodynamics	222
7.1	The H-bond strength in gas-phase, non-polar solvents and molecular crystals	222
7.1.1	Enthalpy–entropy compensation and its influence on the H-bond strength	222
7.1.2	H-bond strength in the gas phase	223
7.1.3	H-bond strength in non-polar solvents	224
7.1.4	H-bond strength in molecular crystals	225
7.2	The H-bond strength in aqueous solutions	225
7.2.1	Introduction: Drug–receptor binding as a sample system	225
7.2.2	Hydrophilic and hydrophobic contributions to drug–receptor binding	226
7.2.3	Hydrophobic binding: Thermodynamics of the steroid–nuclear receptor system	228
7.2.4	Hydrophilic–hydrophobic binding: Thermodynamics of the adenosine A ₁ membrane receptor	232
7.2.5	Enthalpy–entropy compensation: A universal property of drug–receptor binding	235
7.2.6	Solvent reorganization and enthalpy–entropy compensation in drug–receptor binding: The Grunwald and Steel model	238
7.2.7	Thermodynamic discrimination in ligand-gated ion channels	241
7.2.8	Enthalpy–entropy compensation in crown ethers and cryptands	242
8	The role of strong H-bonds in nature: A gallery of functional H-bonds	245
8.1	Introduction	245
8.1.1	Detecting strong H-bonds	245
8.1.2	The concept of ‘functional H-bonds’	245
8.2	RAHB-driven prototropic tautomerism	247
8.2.1	RAHB-activation of the carbon in α to a carbonyl	247
8.2.2	RAHB-induced enolization in keto–enol tautomerism	248
8.2.3	RAHB-induced tautomerism in heteroconjugated systems	248
8.2.4	RAHB cooperativity and anticooperativity in more complex cases	249

8.3	H-bond-controlled crystal packing	251
8.3.1	The crystal packing of squaric acid and its anions	251
8.4	Bistable H-bonds in functional molecular materials	253
8.4.1	Generalities	253
8.4.2	RAHB and ferro/antiferroelectric behavior	254
8.4.3	RAHB and excited-state proton transfer (ESPT)	258
8.5	Functional H-bonds in biological systems	260
8.5.1	RAHB in the secondary structure of proteins and in DNA base pairing	260
8.5.2	Charge-assisted H-bonds in enzymatic catalysis	261
8.5.2.1	Generalities	261
8.5.2.2	The catalytic triad of serine proteases	263
8.5.2.3	Δ^5 -3-Ketosteroid isomerase	266
8.5.2.4	An aspartic protease: HIV-1 protease	267
8.6	Σ -bond cooperativity and anticooperativity in PAHBs	269
8.6.1	Cooperative and anticooperative water chains	269
8.6.2	An example of cooperativity: The gramicidine A channel	272
8.6.3	An example of anticooperativity: Water-without-proton transmission in aquaporin channels	275
