

Contents

Part I Theoretical Foundations

- 1 Theory of Underdense Laser-Plasma Interactions with Photon Kinetic Theory** 3
Luis O. Silva and Robert Bingham
- 2 Theory of Laser-Overdense Plasma Interactions** 19
Alexander Andreev

Part II High Energy Density Physics

- 3 Shock Waves and Equations of State Related to Laser Plasma Interaction** 49
Shalom Eliezer
- 4 The Effect of a Radiation Field on Excitation and Ionisation in Non-LTE High Energy Density Plasmas** 79
Steven J. Rose
- 5 Energetic Electron Generation and Transport in Intense Laser-Solid Interactions** 91
Paul McKenna and Mark N. Quinn

Part III Inertial Confinement Fusion

- 6 The Physics of Implosion, Ignition and Propagating Burn** 115
John Pasley
- 7 Cryogenic Deuterium and Deuterium-Tritium Direct-Drive Implosions on Omega** 135
Valeri N. Goncharov
- 8 Indirect Drive at the NIF Scale** 185
Mordecai D. ('Mordy') Rosen

9	Laser-Plasma Coupling with Ignition-Scale Targets: New Regimes and Frontiers on the National Ignition Facility	221
	William L. Kruer	
10	Inertial Confinement Fusion with Advanced Ignition Schemes: Fast Ignition and Shock Ignition	243
	Stefano Atzeni	
Part IV Laser-Plasma Particle and Radiation Sources		
11	Laser Plasma Accelerators	281
	Victor Malka	
12	Ion Acceleration: TNSA	303
	Markus Roth and Marius Schollmeier	
13	Coherent Light Sources in the Extreme Ultraviolet, Frequency Combs and Attosecond Pulses	351
	Matt Zepf	
Part V Tools and Instrumentation		
14	Hydrodynamic Simulation	377
	Alex P. L. Robinson	
15	Particle-in-Cell and Hybrid Simulation	397
	Alex P. L. Robinson	
16	Diagnostics of Laser-Plasma Interactions	409
	David Neely and Tim Goldsack	
17	Microtargetry for High Power Lasers	431
	Martin Tolley and Chris Spindloe
