| List of Tables | xvii |
| Preface..... | xix |
| Acknowledgments..... | xxi |
| Author | xxiii |
| | |
| Chapter 1 Introduction | 1 |
| 1.1 Atomic and Molecular Beam Basics | 1 |
| 1.2 A Review of Reviews | 11 |
| | |
| Chapter 2 Kinetic Theory of Gases and Atomic Beam Terminology | 19 |
| 2.1 Introduction | 19 |
| 2.2 Kinetic Theory Expressions | 19 |
| 2.3 Equations of Flow through an Orifice | 23 |
| 2.4 Determination of Atomic Diameter | 26 |
| 2.5 Atomic Beam Terminology | 28 |
| | |
| Chapter 3 Design of Ovens | 31 |
| 3.1 Introduction | 31 |
| 3.2 Heating Methods | 32 |
| 3.2.1 Indirect Electric Heating | 32 |
| 3.2.2 Passing a Current Directly through Oven | 33 |
| 3.2.3 Electromagnetic Induction | 33 |
| 3.2.4 Indirect Heating by Electron Bombardment | 34 |
| 3.2.5 Direct Heating by Electron Bombardment..... | 35 |
| 3.2.6 Heating by Photons | 36 |
| 3.2.7 Other Methods..... | 37 |
| 3.2.8 Discussion of Choice of Heating Method | 37 |
| 3.3 Oven Design | 39 |
| 3.3.1 Oven Material..... | 39 |
| 3.3.2 Oven Design Considerations | 41 |
| 3.3.3 Temperature Measurement..... | 43 |
| 3.3.4 Radiation Shields..... | 43 |
| 3.4 Production of Circular Apertures and Slits | 44 |
| 3.4.1 Introduction | 44 |
| 3.4.2 Circular Apertures..... | 44 |
| 3.4.3 Slits..... | 45 |

| | | |
|------------------|---|-----|
| Chapter 4 | Ovens for Evaporation of Alkali Metals and Their Salts | 47 |
| 4.1 | Introduction | 47 |
| 4.2 | Ovens in Which a Reaction Takes Place | 47 |
| 4.3 | Conventional Ovens for Production of Beams of Alkali Metals | 53 |
| 4.4 | Ovens for Alkali Halides | 57 |
| 4.5 | Evaporation from Ampoules | 61 |
| 4.6 | Recirculating Ovens | 63 |
| 4.6.1 | Introduction | 63 |
| 4.6.2 | Direct Return of Metal | 63 |
| 4.6.3 | Recycling by Capillary Action | 67 |
| 4.6.4 | Recirculation by Ion Formation | 70 |
| 4.6.5 | Discussion of Recirculating Systems | 72 |
| Chapter 5 | Ovens for Higher Temperatures | 73 |
| 5.1 | Introduction | 73 |
| 5.2 | Beryllium, Magnesium, Calcium, Strontium and Barium Beams | 73 |
| 5.3 | Beams of Scandium and Yttrium | 80 |
| 5.4 | Titanium and Zirconium Beams | 81 |
| 5.5 | Beams of Vanadium and Compounds of Tantalum | 81 |
| 5.6 | Chromium Beams | 82 |
| 5.7 | Manganese Beams | 83 |
| 5.8 | Iron, Cobalt and Nickel Beams | 84 |
| 5.9 | Beams of Copper, Silver and Gold | 84 |
| 5.10 | Zinc, Cadmium and Mercury Beams | 87 |
| 5.11 | Beams of Boron, Aluminium, Gallium, Indium and Thallium | 90 |
| 5.12 | Beams of Carbon, Silicon, Germanium, Tin and Lead | 95 |
| 5.13 | Beams of Phosphorus, Arsenic, Antimony and Bismuth | 100 |
| 5.14 | Sulphur, Selenium, Tellurium and Polonium Beams | 101 |
| 5.15 | Beams of the Lanthanides | 102 |
| 5.16 | Beams of the Actinides | 104 |
| 5.17 | Beam Sources for Refractory Materials | 107 |
| 5.17.1 | Introduction | 107 |
| 5.17.2 | Beams from Wires | 107 |
| 5.17.3 | Beams from Rotating Cylinders | 109 |
| 5.17.4 | Direct Electron-Beam Heating | 110 |
| Chapter 6 | Production of Beams of Dissociated Atoms and Other Radicals | 111 |
| 6.1 | Introduction | 111 |
| 6.2 | Production of Atomic Hydrogen by Thermal Dissociation... | 111 |
| 6.2.1 | Introduction | 111 |

| | | |
|------------------|---|-----|
| 6.2.2 | Thermal Dissociation of Hydrogen on Tungsten Filaments and Surfaces | 112 |
| 6.2.3 | Thermal Dissociation of Hydrogen in Tungsten and Other Furnaces | 113 |
| 6.3 | Discharge Sources for Atomic Hydrogen | 122 |
| 6.3.1 | Introduction | 122 |
| 6.3.2 | Wood's Tubes | 123 |
| 6.3.3 | Arc Sources | 128 |
| 6.3.4 | Radiofrequency Discharges | 130 |
| 6.3.5 | Microwave Discharges | 140 |
| 6.4 | Another Method for Producing a Beam of Atomic Hydrogen | 151 |
| 6.5 | Discussion of Atomic Hydrogen Production | 151 |
| 6.6 | Atomic Oxygen Beams | 152 |
| 6.7 | Beams of Atomic Nitrogen | 159 |
| 6.8 | Sources of Halogen Beams | 164 |
| 6.9 | Beams of Other Radicals | 169 |
| 6.10 | Beams of Molecules of Gaseous Species | 171 |
| Chapter 7 | Gases | 173 |
| 7.1 | Introduction | 173 |
| 7.2 | Recirculation of Gases | 173 |
| 7.3 | Atom Beam Levitation | 174 |
| Chapter 8 | Theory of Collimated Atomic Beam Formation | 177 |
| 8.1 | Introduction | 177 |
| 8.2 | Clausing's Treatment of Flow through a Tube | 179 |
| 8.3 | Solutions of Clausing Equation | 183 |
| 8.3.1 | Introduction | 183 |
| 8.3.2 | Early Solutions | 185 |
| 8.3.3 | Discussion of above Solutions | 189 |
| 8.3.4 | Numerical Solutions | 190 |
| 8.3.5 | Solutions at Higher Pressures | 191 |
| 8.4 | Transmission Probability | 193 |
| 8.4.1 | Introduction | 193 |
| 8.4.2 | Numerical and Empirical Calculations | 194 |
| 8.4.3 | Monte Carlo Calculations | 202 |
| 8.4.4 | Other Aspects of Flow | 204 |
| 8.4.5 | Allowing for Interatomic Collisions | 205 |
| 8.5 | Angular Distribution of Atomic Beam | 206 |
| 8.5.1 | Introduction | 206 |
| 8.5.2 | Collision-Free Theory | 206 |
| 8.5.3 | Density Distribution in a Tube | 210 |
| 8.5.4 | Effect of Interatomic Collisions | 211 |
| 8.5.5 | Near-Field Effect | 215 |

| | | |
|-------------------|--|-----|
| Chapter 9 | Designing an Atomic Beam | 217 |
| 9.1 | Introduction | 217 |
| 9.2 | Expressions Needed to Predict Beam Properties | 218 |
| 9.3 | Optimising the Beam-Forming Impedance | 221 |
| Chapter 10 | Techniques of Multichannel Collimator Construction | 225 |
| 10.1 | Introduction | 225 |
| 10.2 | Metallic Foil Arrays | 226 |
| 10.3 | Plastic Matrix Arrays | 231 |
| 10.4 | Arrays of Glass Capillaries | 236 |
| 10.4.1 | Introduction | 236 |
| 10.4.2 | Capillary Drawing Techniques | 237 |
| 10.4.3 | Unfused Glass Arrays | 238 |
| 10.4.4 | Simple Fused Arrays | 238 |
| 10.4.5 | Metal Core Arrays..... | 240 |
| 10.4.6 | Drawing of Fused Capillaries | 241 |
| 10.4.7 | Drawing of Solid-Cored Capillaries | 249 |
| 10.4.8 | Other Methods of Producing Glass Arrays..... | 254 |
| 10.4.9 | Section Conclusion | 255 |
| 10.5 | Composite Metal Techniques | 256 |
| 10.6 | Other Collimator Construction Techniques | 260 |
| 10.6.1 | Introduction | 260 |
| 10.6.2 | Stacks of Metal Wires and Tubes..... | 260 |
| 10.6.3 | Hole Boring Techniques..... | 261 |
| 10.6.4 | Aligned Bored Foils | 262 |
| 10.6.5 | Wooden Collimators..... | 263 |
| 10.6.6 | Dry Etching Techniques..... | 265 |
| 10.6.7 | Arrays in Silica, Silicon and Alumina | 265 |
| 10.6.8 | Possibilities for the Future..... | 269 |
| 10.7 | Focussing Capillary Arrays..... | 271 |
| 10.8 | Chapter Conclusion | 274 |
| Chapter 11 | Comparison of Theory with Measurements..... | 275 |
| 11.1 | Introduction | 275 |
| 11.2 | Beam Formed by Single Tubes..... | 276 |
| 11.2.1 | Introduction | 276 |
| 11.2.2 | Measurements of Throughput | 276 |
| 11.2.3 | Measurements of Axial Intensity | 278 |
| 11.2.4 | Measurements of Halfwidths | 279 |
| 11.3 | Beams Formed by Plane Capillary Arrays..... | 285 |
| 11.3.1 | Measurements of Throughput | 285 |
| 11.3.2 | Measurements of Axial Intensity | 288 |
| 11.3.3 | Measurements of Halfwidths | 290 |

| | | |
|----------------------|---|-----|
| 11.4 | Beam Formed by Focussing Capillary Arrays..... | 295 |
| 11.5 | Indirect Comparison between Theory and Experiment..... | 296 |
| 11.6 | Conclusions from All Previous Comparisons | 298 |
| 11.7 | Comparison with Atomic Beams Produced by Free Jet Sources..... | 299 |
| Chapter 12 | Other Indications..... | 303 |
| 12.1 | Introduction | 303 |
| 12.2 | Specular Reflection..... | 303 |
| 12.3 | Beam Velocity | 304 |
| 12.4 | Atom Distribution within a Tube..... | 304 |
| 12.5 | Dissociation of Hydrogen on Hot Surfaces | 306 |
| Chapter 13 | Concluding Observations | 309 |
| 13.1 | Introduction | 309 |
| 13.2 | Some Atomic Beam Myths | 309 |
| 13.3 | Some Recommendations | 311 |
| 13.4 | Finally..... | 312 |
