
Contents

Preface.....	vii
Acknowledgments.....	xiii
Chapter 1 Introduction.....	1
Five Unresolved Problems in Superconductivity	1
References	4
Chapter 2 Pattern of Elemental Superconductors in the Periodic Table.....	5
Chemical Introductory Quantum Mechanics.....	7
Periodic Table Quantum Structure.....	8
Metals and Insulators	10
Introduction to Bonding in Metals and Nonmetals.....	11
Pressure Effects on Superconductivity.....	15
References	15
Chapter 3 High-Temperature Superconductors, $T_c > 77$ K.....	17
<i>d</i> -Wave Symmetry for HT_c Superconductors.....	18
References	20
Chapter 4 Electron Spin in Superconductors	21
Unpaired Electron Spin and Superconductors	21
Low-Temperature Limit of Knight Shift.....	23
Experimentally Verified Electron Spin in a Superconductor.....	24
References	25
Chapter 5 Heat Capacity and Magnetic Susceptibility in Superconductors	27
Heat Capacity	27
Magnetic Susceptibility of Superconductors.....	29
References	31
Chapter 6 Quantum Foundations of Molecular Electricity and Magnetism.....	33
The Sommerfeld Relationship.....	33
Wiedemann–Franz Law	34
Origins of Resistivity in Metals	35
Historical Origins of Electron Scattering Resistivity.....	35
Quantum Magnetoresistance, h/e^2	36

	Electromagnetic Quanta	37
	Dissipative Magnetoresistance	41
	Quantum Mechanics and Thermal Conductance.....	42
	References	43
Chapter 7	Metals and Insulators	45
	Factors in Forming Metals or Insulators.....	47
	Bonding in Small Clusters of Alkali Metals.....	49
	Bonding Models for Insulators.....	50
	Toward a Qualitative Model for Bonding in Metals	52
	Mott Transitions in Metallic Systems	55
	References	56
Chapter 8	Electron Transport in Metals.....	59
	Band Theory in Normal Coordinates.....	59
	Resistivity/Conductance	61
	Electron Spin in Open Circuit Conductors.....	61
	Resistivity Phenomenology	65
	Causes of Electron Scattering in Condensed Metals	67
	Molecular Orbital Approaches to Resistivity	68
	Electron Phonon Scattering.....	73
	Electron Cyclotron Resonance in Metals	74
	References	75
Chapter 9	Magnetoresistance.....	77
	Hall Effect	77
	Hall Coefficient	79
	Angular Anisotropy of Magnetoresistance	79
	Conduction Band Shifts with External Magnetic Fields.....	82
	Meissner–Ochsenfeld Effect	83
	Diamagnetic and Paramagnetic Elemental Metals	84
	Elemental Ferromagnetism and Paramagnetism.....	87
	Electron Spin and Superconductors.....	89
	Magnetic Susceptibility, Expulsion of External Magnetic Fields by Superconductors.....	91
	Heat Capacity at T_c	92
	de Haas van Alphen Effect.....	98
	References	100
Chapter 10	Quantum Hall Effect.....	103
	Landau Levels	106
	Origins of Positive Hall Coefficients.....	107
	Origins of Electron Scattering in Metals	110

	Low and Zero Electron Scattering in the Quantum Hall Regime ...	112
	Quantum Hall Observation	114
	Phase Transition Quanta in the Quantum Hall Regime.....	115
	References	116
Chapter 11	Type I Superconductivity	119
	Experimental Type I Superconductivity.....	119
	Critical Magnetic Field versus T for Elemental Superconductors ..	119
	Thermodynamic Variables and Superconductivity	124
	Mott Transition, Electron Pair Bonds, and Superconductivity	126
	Experimental Approaches to Spin Pairing and Superconductivity	128
	Thermodynamic/Electronic Contributions to the Superconductor Energy Gap	128
	Empirical/Theoretical Requirements for Superconductivity	131
	Superconducting Phase Transition at a Temperature Determined by Zero Scattering for the Highest Energy Conducting Electrons	132
	Material Must Be Three-Dimensional and Large Enough to Support a Nonsuperconducting Boundary Layer	132
	T Dependent Energy Gap Must Exist between the Highest Occupied Conducting and Lowest Vacant Bands of the Superconductor.....	133
	Conduction Band for the Superconductor Must Have Zero Electron Scattering.....	134
	Volume Magnetic Susceptibility Must Be -1	134
	Periodic Table of One-Bar Superconductors: Does It Fit These Requirements for Superconductivity?	135
	Estimating the Order of T_c for Elemental Superconductors	140
	References	142
Chapter 12	Type II Superconductivity	145
	Isotope Effects in Superconductors.....	145
	Conduction Band in MgB_2	146
	Isotope Effects in Type II Superconductors	147
	Vortex Lattices	150
	References	153
Chapter 13	Conclusions	155
	What about the Five Unresolved Problems in Superconductivity?	155
	Pattern of Elemental Superconductors at One Bar in the Periodic Table	155
	High-Temperature Superconductivity, Superconductors with Critical Temperatures, $T_c > 77$ K.....	156

Unpaired Electron Spin in Superconductivity	157
Higher Specific Heat Capacity at Constant Pressure in Superconductors as Compared to the Normal Metals.....	158
Superconductivity's Alignment with the Rest of Atomic and Molecular Quantum Mechanics	159
Summary	159
References	160
Glossary	161
Variables, Constants, Acronyms.....	171
Index.....	173
