

## Contents

Preface	v
Part One: Polarizabilities and Hyperpolarizabilities of Dendritic Systems .....	1
<i>Masayoshi Nakano and Kizashi Yamaguchi</i>	
Part Two: Molecules in Intense Laser Fields: Nonlinear Multiphoton Spectroscopy and Near-Femtosecond To Sub-Femtosecond (Attosecond) Dynamics .....	147
<i>André D. Bandrauk and Hirohiko Kono</i>	
Part Three: Ultrafast Dynamics and non-Markovian Processes in Four-Photon Spectroscopy .....	215
<i>B. D. Fainberg</i>	

## Contents

Abstract	6	3.5. Second Hyperpolarizabilities of Cayley-Tree-Type Phenylacetylene Dendrimers	62
1. Introduction	8	3.5.1. Calculation of $\gamma$ of D25	63
2. Polarizabilities and Hyperpolarizabilities of Dendritic Aggregate Systems	11	3.5.2. Comparison of the $\gamma$ Value and $\gamma$ Density Distribution of Diphenylacetylene Calculated by the INDO/S CHF Method with Those by the B3L YP Method	63
2.1. Aggregate Models	11	3.5.3. $\gamma$ and $\gamma$ Densities of D25	64
2.2. Density Matrix Formalism for Molecular Aggregate under Time-Dependent Electric Field	14	3.6. Summary	67
2.3. Nonperturbative (Hyper)polarizabilities and Their Partition into the Contribution of Exciton Generation	17	4. Extensions of Models and Analysis	69
2.4. Off-Resonant Polarizabilities of Dendritic Aggregates	20	4.1. Master Equation Approach Involving Explicit Exciton-Phonon Coupling	69
2.4.1. One-Exciton States and Their Spatial Contribution to $\alpha$	21	4.1.1. Model Hamiltonian Involving Exciton-Phonon Coupling	70
2.4.2. Effects of Intermolecular Interaction and Relaxation on the Spatial Contribution of One-Exciton Generation to $\alpha$	24	4.1.2. Master Equation Approach	74
2.4.3. Comparison of Polarizabilities of Dendritic Aggregates with Those of One-Dimensional (Linear) and Two-Dimensional (Square-Lattice) Aggregates	26	4.2. Analytical Expression of Hyperpolarizability Density	79
2.5. Off-Resonant Second Hyperpolarizabilities of Dendritic Aggregates	28	4.2.1. Analytical Formula of Hyperpolarizability Density	81
2.5.1. Two Types of Dendritic Aggregates with and without a Fractal Structure	28	4.2.2. $\text{Im}\gamma$ Density of <i>trans</i> -Stilbene	89
2.5.2. Spatial Contributions of One- and Two-Exciton Generations to $\gamma$ of D10	30	4.3. Summary	91
2.5.3. Effects of Intermolecular Interaction and Relaxation on the Spatial Contributions on One- and Two-Exciton Generation to $\gamma$ of D10	31	5. Concluding Remarks	92
2.5.4. Spatial Contributions on One- and Two-Exciton Generations to $\gamma$ of D25	33	Acknowledgments	95
2.5.5. Effects of Intermolecular Interaction and Relaxation on the Spatial Contributions of One- and Two-Exciton Generations to $\gamma$ of D25	34	References	96
2.6. Near-Resonant Second Hyperpolarizabilities of Dendritic Aggregates	35		
2.7. Summary	37		
3. Polarizabilities and Hyperpolarizabilities of Dendrimers	41		
3.1. Cayley-Tree-Type Dendrimers with $\pi$ -Conjugation	41		
3.2. Finite-Field Approach to Static (Hyper)polarizabilities	43		
3.3. Hyperpolarizability Density Analysis	47		
3.4. Size Dependencies of $\alpha$ and $\gamma$ of Oligomer Models for Dendron Parts	53		
3.4.1. Model Oligomers	53		
3.4.2. Comparison of the $\alpha$ and $\gamma$ Values and Their Density Distributions of Stilbene Calculated by the PPP CHF Method with Those by the B3LYP Method	55		
3.4.3. Size Dependencies of $\alpha$ and $\gamma$ for Model Oligomers	57		
3.4.4. $\alpha$ and $\gamma$ Density Distributions for Model Oligomers	59		

## Contents

1	Introduction	221
2	Hamiltonian of chromophore molecule in solvent and basic	

methods of the resonance four-photon spectroscopy	226
<b>3 Calculation of nonlinear polarization</b>	<b>233</b>
<b>4 Stochastic models in transient RFPS</b>	<b>238</b>
4.1 Non-Markovian relaxation effects in two-pulse RFPS with Gaussian random modulation of optical transition frequency	238
4.2 Transient four-photon spectroscopy of near or overlapping resonances in the presence of spectral exchange . . . . .	246
4.3 Non-Markovian relaxation effects in three-pulse RFPS . . . .	252
<b>5 Non-Markovian theory of steady-state RFPS</b>	<b>255</b>
5.1 Introduction and the cubic susceptibility in the case of Gaussian-Markovian random modulation of an electronic transition . . . . .	255
5.2 Model for frequency modulation of electronic transition of complex molecule in solution . . . . .	257
5.3 Cubic susceptibility for detunings larger than reciprocal correlation time . . . . .	262
5.3.1 Classical system of LF motions . . . . .	262
5.3.2 Quantum system of LFOA vibrations . . . . .	265

<b>6 Four-photon spectroscopy of superconductors</b>	<b>271</b>
<b>7 Ultrafast spectroscopy with pulses longer than reciprocal bandwidth of the absorption spectrum</b>	<b>276</b>
7.1 Theory of transient RFPS with pulses long compared with reversible electronic dephasing . . . . .	279
7.1.1 Condon contributions to cubic susceptibility . . . . .	282
7.1.2 Nonlinear polarization in a Condon case for non- overlapping pump and probe pulses . . . . .	286
7.1.3 Non-Condon terms . . . . .	289
7.2 Nonlinear polarization and spectroscopy of vibronic transitions in the field of intense ultrashort pulses . . . . .	291
7.2.1 Classical nature of the LF vibration system and the exponential correlation function . . . . .	295
7.2.2 General case. Quantum nature of the LF vibration system . . . . .	299
<b>8 Experimental study of ultrafast solvation dynamics</b>	<b>300</b>
8.1 Introduction . . . . .	302
8.2 Calculation of HOKE signal of <i>R800</i> in water and <i>D<sub>2</sub>O</i> . . . .	303

8.3	Method of data analysis . . . . .	309
8.4	Discussion . . . . .	314
<b>9</b>	<b>Prospect: Spectroscopy of nonlinear solvation</b>	<b>318</b>
9.1	Four-time correlation functions related to definite electronic states . . . . .	321
9.2	Simulation of transient four-photon spectroscopy signals for nonlinear solvation . . . . .	324
9.3	Spectral moments of the non-equilibrium absorption and luminescence of a molecule in solution . . . . .	331
9.4	Broad and featureless electronic molecular spectra . . . . .	334
9.5	Time resolved luminescence spectroscopy . . . . .	336
9.6	Time resolved hole-burning study of nonlinear solvation . . .	337
9.7	Stochastic approach to transient spectroscopy of nonlinear solvation dynamics . . . . .	339
9.8	Summary . . . . .	344
<b>10</b>	<b>Acknowledgments</b>	<b>350</b>
<b>A</b>	<b>Appendix</b>	<b>350</b>
