<i>Preface</i>	v
1. Scope of Thermodynamics	1
1.1 The verdict on thermodynamics . . . . .	2
1.2 The need for a macroscopic description . . . . .	3
1.2.1 Ideal gas: A macroscopic description . . . . .	4
1.2.2 Measurement of temperature . . . . .	6
1.2.3 Ideal gas: A microscopic description . . . . .	11
1.3 What will thermodynamics do for you? . . . . .	15
1.4 What does thermodynamics not do for you? . . . . .	15
1.5 Problems . . . . .	16
2. The Structure of Thermodynamics	19
2.1 Large systems . . . . .	19
2.2 Macroscopic variables . . . . .	20
2.2.1 Equilibrium: A question of time and history . . .	20
2.2.2 The fundamental relation: Entropy . . . . .	22
2.3 Measurement and walls . . . . .	24
2.3.1 Walls . . . . .	24
2.3.2 Energy measurement . . . . .	25
2.4 Problems . . . . .	33
3. The Laws of Thermodynamics	37
3.1 Zeroth law: The fundamental relation . . . . .	37
3.2 First law: Energy conservation . . . . .	38
3.3 Second law: Entropy always rises . . . . .	42

3.3.1 Examples of the second law in physical systems . . . . .	43	6.4.1 Vapor pressure of small droplets . . . . .	116
3.4 Understanding the second law . . . . .	44	6.4.2 Osmosis . . . . .	118
3.5 Consequences of the first and second laws . . . . .	47	6.5 Problems . . . . .	121
3.6 Third law or Nernst's theorem: Zero temperature cannot be attained . . . . .	50	7. Maxwell Relations	123
3.7 Problems . . . . .	52	7.1 Maxwell relations . . . . .	123
4. Intensive Variables	55	7.2 Reduction of derivatives . . . . .	126
4.1 Pressure . . . . .	56	7.3 Applications . . . . .	129
4.2 Temperature . . . . .	57	7.3.1 Adiabatic compression . . . . .	129
4.3 Chemical potentials . . . . .	57	7.3.2 Isothermal compression . . . . .	131
4.4 Intensive variables in the entropy representation . . . . .	58	7.3.3 Free expansion . . . . .	132
4.5 More on the physical significance of intensive variables . .	62	7.3.4 Joule-Thomson throttling process . . . . .	133
4.6 Euler equation and Gibbs-Duhem relation . . . . .	64	7.3.5 Heating a room . . . . .	135
4.7 Problems . . . . .	65	7.4 Problems . . . . .	138
5. Simple Systems	69	8. Engines, Hurricanes, and Athletes	141
5.1 Second derivatives: expansion coefficient, compressibility, heat capacity, and more . . . . .	69	8.1 The Carnot cycle . . . . .	142
5.2 Mixture of ideal gases . . . . .	71	8.2 Maximum work theorem . . . . .	144
5.3 Gas reactions . . . . .	76	8.3 Engine efficiency . . . . .	147
5.4 Blackbody radiation . . . . .	79	8.3.1 Gasoline engine: the Otto cycle . . . . .	147
5.5 Polymers . . . . .	81	8.3.2 Diesel engine . . . . .	149
5.6 Thermodynamics of adsorbates . . . . .	85	8.3.3 Otto versus Diesel . . . . .	151
5.7 Magnetic systems . . . . .	93	8.3.4 Refrigerator . . . . .	153
5.7.1 Diamagnetism . . . . .	93	8.3.5 Heat pump . . . . .	154
5.7.2 Paramagnetism . . . . .	95	8.4 Cyclones . . . . .	155
5.7.3 Ferromagnetism . . . . .	96	8.4.1 The greenhouse effect . . . . .	156
5.7.4 Fundamental relation for magnetic systems . . . . .	98	8.4.2 A Carnot engine . . . . .	157
5.8 Problems . . . . .	99	8.5 Athletes: the human engine . . . . .	160
6. Thermodynamic Potentials	103	8.6 Thermodynamics in economics . . . . .	162
6.1 Introducing internal constraints via reservoirs . . . . .	104	8.7 Problems . . . . .	166
6.2 Helmholtz free energy . . . . .	107	9. Stability of Thermodynamic Systems	169
6.3 Enthalpy . . . . .	109	9.1 Macroscopic motion . . . . .	169
6.3.1 Joule-Thomson "throttling" process . . . . .	110	9.2 Thermodynamic inequalities . . . . .	171
6.3.2 Gas liquefaction . . . . .	113	9.3 Fluctuations and the principle of Le Chatelier and Braun . . . . .	173
6.4 Gibbs free energy . . . . .	115	10. Phase Transitions	177

10.1	Latent heat . . . . .	182
10.2	Clausius-Clapeyron equation . . . . .	185
10.3	Van der Waals gas . . . . .	187
10.4	Metastability: supersaturated water and overheated liquid . . . . .	193
10.5	The critical point . . . . .	196
10.6	The law of corresponding states and universality . . . . .	199
10.7	Landau theory of phase transitions . . . . .	201
10.8	No phase transitions in one-dimensional systems (almost) . . . . .	203
10.9	Problems . . . . .	206
11.	Summary of Useful Results and Final Remarks	209
11.1	Thermodynamic potentials . . . . .	209
11.1.1	Entropy $S(U, V, N)$ . . . . .	209
11.1.2	Internal energy and others . . . . .	209
11.2	Ideal gas . . . . .	210
11.3	Van der Waals gas . . . . .	211
11.4	Polymers . . . . .	212
11.5	Joule-Thomson throttling . . . . .	212
11.6	Engines . . . . .	212
11.7	Phase transitions . . . . .	213
11.8	Final remarks: beyond equilibrium thermodynamics . . .	213
	Appendix A Partial Derivatives and Differential Forms	217
	<i>Bibliography</i>	221
	<i>Index</i>	223
