Part I Basics

1	Introduction	3
1.1	Complex Plasma.	3
1.2	Occurrence in Space	3
1.2.1	Planetary Magnetospheres	3
1.2.2	Cometary Magnetosphere	4
1.2.3	Interplanetary Dust	4
1.2.4	Interstellar Dust	4
1.2.5	Polar Mesospheric Clouds	5
1.3	Flames	5
1.4	Complex Plasma in Laboratory and Industry	5
1.5	Kinetics	6
1.6	Organization of the Book	6
	References	7
2	Electron Emission from Dust	9
2.1	Free Electron Model	9
2.1.1	Basic Model	9
2.1.2	Density of Electronic States	9
2.1.3	Distribution Function	11
2.1.4	Fermi Energy	12
2.2	Basic Concepts of Electron Emission	13
2.2.1	Potential Energy of an Electron Near the Plane Surface of a Metal	13
2.2.2	Transmission Coefficient Across Metallic Plane Surfaces: Uncharged Surface	15
2.2.3	Thermionic and Electric Field Emission of Electrons from a Plane Surface	23
2.2.4	Photoelectric and Light Induced Field Emission from a Plane Surface	29
2.3	Fowler's Theory (Case: Ia) (After Fowler et al. [13])	31
2.3.1	Uncharged Surface	31

2.3.2	Positively Charged Surface ($v_0 < 0$)	33
2.3.3	Light Induced Field Emission	33
2.3.4	Numerical Results and Discussions.	34
2.4	Modified Dubridge Theory: Case IIa and other effects	36
2.5	<i>Spicer's Three Step Model</i>	38
2.6	Size Effect.	39
2.7	Secondary Electron Emission.	39
2.7.1	Secondary Electron Emission by Electron Impact	39
2.7.2	Spherical Particle (After Misra et al. [31]).	42
2.7.3	Spherical Particle in Maxwellian Plasma.	45
2.8	Electron Emission from Charged Spherical and Cylindrical Surfaces of Metals	47
2.8.1	What is Different About Electron Emission from Curved Surfaces?	47
2.8.2	Reduction of Work Function by Negative Electric Potential on a Spherical Surface.	48
2.8.3	Simple Theory of Electron Emission from Curved Surfaces	50
2.8.4	Transmission Coefficient for Electrons	61
2.8.5	Electron Emission.	68
2.9	Mie's Theory of Light Scattering by Spherical Particles	75
Appendix A:	Electron Transmission Coefficient Across a Negatively Charged Cylindrical Surface (After Misra et al. [28], Sodha and Dubey [45]).	77
Appendix B:	Secondary Emission from Cylindrical Particles.	79
References		82
3	Accretion of Electrons/Ions on Dust Particles	85
3.1	Classical Rate of Accretion of Electrons/Ions on Spherical and Cylindrical Particles (After Mott-Smith and Langmuir [13])	85
3.1.1	General Considerations	85
3.1.2	Function $f(u, v)$ for Maxwellian Distribution of Velocities	87
3.1.3	Spherical Particles	87
3.1.4	Alternate Derivation for Spherical Particles	89
3.1.5	Flowing Plasma	90
3.1.6	Cylindrical Particles	90
3.2	Quantum Effects in Electron Accretion on the Surface of Charged Particles (After Mishra et al. [12]).	92
3.2.1	General Remarks	92
3.2.2	Quantum Effects in Electron Accretion	93
3.3	Critique of OML Theory	96

3.4	Trapping of Ions.	96
3.4.1	Effect of Charge Exchange Ion Collisions with Neutral Atoms on Accretion Current (After Lampe et al. [6]).	97
3.5	Schottky Effect and Electron Accretion.	98
3.6	Accretion of Electrons/Ions Having Generalized Lorentzian Energy Distribution Function on Dust Particles (After Mishra et al. [9]).	98
References		99
4	Kinetics of Dust-Electron Cloud	101
4.1	Thermal Equilibrium: Charge Distribution Over Dust	101
4.2	Steady State (Non Equilibrium) Kinetics	104
4.2.1	Philosophy	104
4.2.2	Charge Distribution in Irradiated Dust Cloud (After Sodha et al. [9]).	105
4.3	Uniform Charge Theory	108
4.4	Dust Cloud with Cylindrical Dust Particle	111
4.5	Solid State Complex Plasma (After Sodha and Guha [6])	111
References		112
5	Kinetics of Complex Plasmas with Uniform Size Dust	113
5.1	Introduction	113
5.2	Complex Plasma in Thermal Equilibrium	114
5.2.1	Charging	117
5.2.2	Conservation of the Sum of Number Densities of Neutral Atoms and Ions	117
5.2.3	Charge Neutrality	117
5.3	Complex Plasma in Absence of Electron Emission from Dust Particles.	118
5.3.1	Number Balance.	120
5.3.2	Energy Balance	120
5.3.3	Dust Particle Balance	121
5.4	Illuminated Complex Plasmas (After Sodha et al. [23]).	122
5.4.1	Early Investigations	122
5.4.2	Collisions in Gaseous Plasmas	122
5.4.3	Specific Problem and Approach (After Sodha et al. [23]).	124
5.4.4	Rate of Emission and Mean Energy of Photoelectrons	124
5.4.5	Analytical Model	126
References		128

6	Kinetics of Flowing Complex Plasma	131
6.1	Introduction	131
6.2	Modification in Electron/Ion Accretion Current to Particles . . .	132
6.3	Kinetics	133
6.3.1	Charge Distribution.	133
6.3.2	Master Equation for the Population Balance	134
6.4	Other Kinetic Equations	134
6.4.1	Conservation of Neutral Plus Ionic Species	134
6.4.2	Charge Neutrality	134
6.4.3	Electron and Ion Kinetics	135
6.4.4	Energy Balance for Electrons and Ions	135
6.5	Specific Situations (After Mishra et al. [13])	136
	References	138
7	Kinetics of the Complex Plasmas Having Dust with a Size Distribution	141
7.1	Introduction	141
7.2	Size Distribution.	142
7.3	Uniform Electric Potential on all Dust Particles of Same Material	143
7.4	Kinetics with Uniform Electric Potential on Dust Particles (After Sodha et al. [20])	143
7.4.1	Basic Equations	143
7.4.2	Kinetics of the Complex Plasmas with a Mixture of Dust of Different Materials: Uniform Electric Potential Theory (After Sodha et al. [19])	145
7.5	Kinetics of the Complex Plasma in Thermal Equilibrium	145
7.6	Inclusion of <i>Mie</i> Scattering by Dust in Complex Plasma Kinetics (After Sodha et al. [20])	146
	References	149
8	Theory of Electrical Conduction	151
8.1	Phenomenological Theory (After Sodha [2])	151
8.1.1	Motion of Electrons	151
8.1.2	Current Density/Electrical Conductivity/Resistivity . . .	152
8.1.3	Einstein Relation	153
8.1.4	Electrical Conductivity in Presence of an Alternating Electric Field	154
8.1.5	Electrical Conductivity in Presence of Magnetic Field	154
8.1.6	Nonlinear Effects: Hot Electrons	156
8.2	Kinetic Theory (After Mishra and Sodha [1])	158
8.2.1	Boltzmann's Transfer Equation	158
8.2.2	Electrical Current/Electrical Conductivity	160

8.2.3	Other Transport Parameters	161
8.2.4	Ohmic Power Loss	162
8.3	Kinetics of Complex Plasma with a D.C. Electric Field . . .	164
	References	165
9	Electromagnetic Wave Propagation in Complex Plasma	167
9.1	Linear Propagation	167
9.1.1	Wave Equation.	167
9.1.2	Complex Refractive Index for Linear Propagation in the Absence of a Magnetic Field	168
9.1.3	Electromagnetic Propagation Along the Magnetic Field	169
9.1.4	Simplified Expressions for Transport Parameters	170
9.2	Physical Basis of Nonlinear Propagation of Electromagnetic Waves	171
9.3	Nonlinear Complex Plasma Parameters	172
9.4	PMSE Structures	176
9.5	Self-Focusing of a Gaussian Electromagnetic Beam in a Complex Plasma (After Mishra et al. [5])	178
9.5.1	Self-Focusing	178
9.5.2	Net Flux of Electrons/Ions.	179
9.5.3	Complex Plasma Kinetics	180
9.5.4	Propagation of Gaussian Electromagnetic Beam.	184
9.5.5	Numerical Results and Discussion	185
	References	186

10	Fluctuation of Charge on Dust Particles in a Complex Plasma	187
10.1	Introduction	187
10.2	Fluctuation of Charge on Uniform Size Dust Particles in a Complex Plasmas	188
10.2.1	Methodology	188
10.2.2	Numerical Results and Discussion	189
10.3	Fluctuation of Charge on Dust Particles with a Size Distribution in a Complex Plasmas	193
	References	195

Part II Applications

11	Kinetics of Complex Plasmas in Space	199
11.1	Introduction	199
11.1.1	Planetary Magnetospheres	199
11.1.2	Cometary Magnetosphere	200
11.1.3	Interplanetary Dust	200

11.1.4	Interstellar Dust	201
11.1.5	Polar Mesospheric Clouds	201
11.2	Kinetics of Polar Mesospheric Clouds (NLCs and PMSEs) (After Sodha et al. [55])	201
11.2.1	Basic Information	201
11.2.2	Analytical Model	203
11.2.3	Model of the Mesosphere Without Dust	206
11.2.4	Computational Methodology	207
11.2.5	Photoelectric Emission from Charged Dust Particles by Solar Radiation	207
11.2.6	Other Parameters	208
11.2.7	Numerical Results and Discussion	208
11.3	Cometary Plasma (After Sodha et al. [54])	211
11.3.1	Basic Information	211
11.3.2	Analytical Model for Electronic Processes in a Cometary Coma Plasma	212
11.3.3	Numerical Results and Discussion	215
11.4	Charging of Ice Grains in Saturn E Ring (After Misra et al. [37])	217
11.4.1	Model of Complex Plasma Environment	217
11.4.2	Mathematical Modeling of Kinetics	218
11.4.3	Numerical Results and Discussion	222
11.5	Kinetics of Interplanetary Medium (After Misra and Mishra [36])	225
11.5.1	The Interplanetary Medium	225
11.5.2	Analysis	225
11.5.3	Constancy of Neutral Plus Ionic Species	226
11.5.4	Energy Balance	227
11.5.5	Dust Temperature	227
11.5.6	Methodology	227
11.5.7	Photoelectric Efficiency	228
11.5.8	Secondary Electron Emission	228
11.5.9	Numerical Results and Discussion	230
11.6	Temperature of Interstellar Warm Ionized Medium (After Misra et al. [37])	230
11.6.1	Interstellar Warm Ionized Medium	230
11.6.2	Analysis	232
11.6.3	Numerical Results and Discussion	236
11.7	Conclusions	242
	References	242
12	Complex Plasma as Working Fluid in MHD Power Generators	245
12.1	Introduction	245

12.2	Basic Equations	245
12.3	Analysis for Constant Mach Number (After Swifthook and Wright [13])	247
12.3.1	Efficiency	247
12.3.2	Other Parameters	248
12.4	Complex Plasmas as Working Fluid in MHD Generators (After Sodha and Bendor [10, 11])	249
12.4.1	The Need	249
12.4.2	Equivalent Parameters	249
12.4.3	Steam Turbine-Magnetohydrodynamic Topping Closed Cycle	250
12.4.4	Feasibility	252
	References	253
13	Rocket Exhaust Complex Plasma	255
13.1	Introduction	255
13.2	Composition of Rocket Exhausts	256
13.3	Impact of Rocket Exhausts on Ionosphere and Upper Atmosphere	258
13.3.1	Early Work	258
13.3.2	Optical Observations	259
13.3.3	Nature of Dust	260
13.3.4	Chemical Kinetics of Electron/Ion Depletion by Rocket Exhausts	260
13.3.5	Role of Dust	262
	References	262
14	Kinetics of Complex Plasmas with Liquid Droplets	263
14.1	Introduction	263
14.2	Wet Alkali Metal Vapor (After Smith [14])	263
14.3	Reduction of Electron Density in a Plasma by Injection of Water Droplets	266
14.3.1	Early Work	266
14.3.2	Reduction of Potential Energy Barrier	267
14.3.3	Rate of Accretion of Electrons on Droplets	267
14.3.4	Emission of Negative Ions from a Charged Droplet Due to Evaporations	268
14.3.5	Kinetics of Complex Plasma with Water Droplets . . .	270
	References	274
15	Growth of Particles in a Plasma	277
15.1	Introduction	277
15.2	Basic Equations	278
15.2.1	Charging of Dust Grains	279

15.2.2 Number Balance of Electrons	279
15.2.3 Number Balance of Ions	279
15.2.4 Number Balance of Neutral Atoms	279
15.2.5 Radius of the Particles	280
15.2.6 Energy Balance of Electrons	280
15.2.7 Energy Balance for Ions	281
15.2.8 Energy Balance for Neutral Species	281
15.2.9 Numerical Results and Discussion	283
References	285
16 Electrostatic Precipitation	287
16.1 Introduction	287
16.2 Corona Discharge (After White [4], Oglesby and Nichols [2])	287
16.3 Particle Charging (After White [4])	288
16.3.1 Two Distinct Processes	288
16.3.2 Field Charging	289
16.3.3 Ion Diffusion (Ion Accretion)	290
16.3.4 Magnitude of Charge, Acquired by a Particle Due to Electric Field and Ion Diffusion (Accretion)	290
16.4 Particle Collection (After White [4])	290
16.4.1 Limitation of Theory	290
16.4.2 Drift of Particles	291
16.4.3 Collection Efficiency	292
