Contents

Preface **vii**

1 Introduction **1**
1.1 What are Plasmon Resonances? 1
1.2 Dispersion Relations 7
1.3 Overview of Book Contents 13
References 23

2 Modal Analysis of Plasmon Resonances in Nanoparticles **27**
2.1 Plasmon Resonances as an Eigenvalue Problem 27
2.2 Dual Formulation 47
2.3 General Properties of Plasmon Spectrum 61
2.4 Plasmon Resonances in Nanoshells 81
2.5 Relation to the Riemann Hypothesis 98
References 117

3 Analytical and Numerical Analysis of Plasmon Resonances **119**
3.1 Some Analytical Solutions for Plasmon Modes 119
3.2 Numerical Techniques for the Analysis of Plasmon Modes . . . 161
3.3 Numerical Examples 173
3.4 Universal Numerical Technique for the Solution of Boundary Integral Equations 194
3.5 Absorbing Boundary Conditions for Finite-Difference Time-Domain Analysis of Scattering Problems 204
References 216

4 Radiation Corrections, Excitation of Plasmon Modes and Selective Applications **219**
4.1 Perturbation Technique 219
4.2 First- and Second-Order Radiation Corrections 224
4.3 Analysis of Extinction Cross Section 237
4.4 Coupling of Plasmon Modes to Incident Radiation, Time-Dynamics of Their Excitation and Dephasing 260
4.5 Selective Applications of Plasmon Resonances 279
4.5.1 Plasmon Resonance Enhancement of Faraday Rotation in Garnet Films 280
4.5.2 Application of Plasmon Resonances to Heat-Assisted Magnetic Recording 290
4.5.3 Application of Plasmon Resonances to All-Optical Magnetic Recording 297
4.5.4 SERS and Plasmon Resonances 303
4.5.5 Ball Lightning 314
4.5.6 Optical Controllability of Plasmon Resonances 315
References 316
