

CONTENTS

<i>Preface</i>	<i>vii</i>
<i>Future Contributions</i>	<i>ix</i>
<i>Contributors</i>	<i>xiii</i>
1. Octree Grid Topology-Preserving Geometric Deformable Model (OTGDM)	1
Ying Bai, Xiao Han, Jerry L. Prince	
1. Introduction	1
2. Digital Topology on Adaptive Octree Grids	3
3. OTGDM	13
4. Experiments	22
5. Summary and Discussion	29
Appendix: Proof of Non-self-intersection of the Adaptive CCMC Algorithm	30
References	33
2. Second-order Variational Models for Image Texture Analysis	35
Maitine Bergounioux	
1. Introduction	36
2. First-order Variational Decomposition Models	39
3. Second-order Models (2D Case)	55
4. 3D Second-order Models	81
5. Examples and Applications	96
Appendix A. Mathematical Tools	104
Appendix B. 2D-MATLAB® Codes	115
References	121
3. Electron Microscopy of Pharmaceutical Systems	125
Victoria Klang, Nadejda B. Matsko	
1. Introduction	126
2. Electron Microscopy (EM) of Solid Pharmaceutical Systems	127
3. EM of Hydrated Pharmaceutical Systems	136
4. Analytical Electron Microscopy of Pharmaceutical Systems	144
5. Practical Application and Examples	155

6. Conclusions	195
Acknowledgments	195
References	196
<i>Contents of Volumes 151–180</i>	209
<i>Index</i>	215

Octree Grid Topology-Preserving Geometric Deformable Model (OTGDM)

Ying Bai¹, Xiao Han², Jerry L. Prince³

¹HeartFlow Inc., Redwood City, CA, USA

²Electa Inc., Maryland Heights, MO, USA

³Johns Hopkins University, Baltimore, MD, USA

Contents

1. Introduction	1
2. Digital Topology on Adaptive Octree Grids	3
2.1. Basic Concepts	4
2.2. VOG	6
2.3. Simple Point Characterization for VOGs	8
2.3.1. Geodesic Neighborhood and Topological Number	9
2.3.2. Multilevel Array	10
3. OTGDM	13
3.1. VOG Generation	13
3.1.1. Topology-Preserving VOG Simplification	13
3.1.2. Image-based VOG Adaptation	15
3.2. Numerical Scheme for VOGs	16
3.3. Isosurface Extraction for VOGs	18
3.4. OTGDM Algorithm	21
4. Experiments	22
4.1. Harmonic Sphere Phantom	22
4.2. CT Pelvic Bone	23
4.3. MR Human Brain	25
5. Summary and Discussion	29
Appendix: Proof of Non-self-intersection of the Adaptive CCMC Algorithm	30
References	33

Second-order Variational Models for Image Texture Analysis

Maitine Bergounioux

UMR 7349-MAPMO Fédération Denis Poisson, Université d'Orléans, BP 6759 F-45067 Orleans Cedex 2
Email: maitine.bergounioux@univ-orleans.fr

Contents

1. Introduction	36
2. First-order Variational Decomposition Models	39
2.1. Variational Models Principle	39
2.2. The Rudin-Osher-Fatemi Model	42
2.2.1. <i>The Space of Bounded Variation Functions</i>	43
2.2.2. <i>The Rudin-Osher-Fatemi Model</i>	44
2.2.3. <i>First-order Optimality Condition</i>	45
2.3. Some Generalizations	48
2.3.1. <i>The Meyer Model</i>	48
2.3.2. <i>Generalized $u+v+w$ Decomposition Models</i>	49
2.4. Numerical Computation	49
2.4.1. <i>Rudin-Osher-Fatemi Discrete Model</i>	49
2.4.2. <i>Chambolle Algorithm</i>	51
2.4.3. <i>Nesterov-type Algorithms</i>	52
3. Second-order Models (2D Case)	55
3.1. The Space $BV^2(\Omega)$	55
3.1.1. <i>General Properties</i>	55
3.1.2. <i>The Total Generalized Variation</i>	60
3.2. A Partial Second-order Model	61
3.2.1. <i>The ROF2 Model</i>	61
3.2.2. <i>Anisotropic Improvement</i>	62
3.3. Numerical Experiments	63
3.3.1. <i>Discretization of Problem (P_2)</i>	63
3.3.2. <i>Optimality Conditions</i>	64
3.3.3. <i>A Fixed-point Algorithm to Compute $\mathcal{P}_{\lambda, \kappa_2}$</i>	66
3.3.4. <i>Nesterov-type Algorithms</i>	69
3.4. A full Second-order Model	69
3.4.1. <i>The Model</i>	70
3.4.2. <i>Numerical Realization and Algorithm</i>	71

3.5. Numerical Results	74
3.5.1. <i>Denoising</i>	74
3.5.2. <i>Texture Analysis</i>	76
4. 3D Second-order Models	81
4.1. Resolution of Problems (\mathcal{P}_1) and (\mathcal{P}_2) in the 3D Case	81
4.2. Anisotropic Variant for (\mathcal{P}_2) in the 3D Case	94
5. Examples and Applications	96
5.1. X-ray Imaging—Material Science	97
5.2. MRI Imaging—Biology	99
Appendix A. Mathematical tools	104
A.1. Optimization in Banach Spaces	106
A.1.1. <i>Semi-continuity and Convexity</i>	106
A.1.2. <i>Gâteaux-differentiability</i>	106
A.1.3. <i>Minimization in a Reflexive Banach Space</i>	107
A.1.4. <i>Example: Projection on a Closed Convex Set</i>	108
A.2. Nonsmooth Analysis	109
A.2.1. <i>The Hahn-Banach Separation Theorem</i>	109
A.2.2. <i>Subdifferential</i>	110
A.2.3. <i>Case Where f is a Set Indicatrix</i>	111
A.2.4. <i>Legendre-Fenchel Transformation</i>	112
A.2.5. <i>Relation with Subdifferentiability</i>	113
A.3. Sobolev Spaces	114
Appendix B. 2D-MATLAB [®] codes	115
B.1. Problem (\mathcal{P}_1)	115
B.2. Problem (\mathcal{P}_2)	117
B.3. Problem ($\mathcal{P}_{\lambda,\mu}$)	120
References	121

Electron Microscopy of Pharmaceutical Systems

Victoria Klang, Nadejda B. Matsko*

Graz Centre for Electron Microscopy and Institute for Electron Microscopy and Nanoanalysis, Graz University of Technology, Steyrergasse 17, Graz, Austria

Contents

1. Introduction	126
2. Electron Microscopy (EM) of Solid Pharmaceutical Systems	127
2.1. Transmission Electron Microscopy (TEM)	129
2.2. Scanning Electron Microscopy (SEM)	134
3. EM of Hydrated Pharmaceutical Systems	136
3.1. Environmental SEM	136
3.2. Freeze-Fracture (FF) Techniques for TEM and SEM	138
3.3. Cryopreparation Techniques for TEM and SEM	141
4. Analytical Electron Microscopy of Pharmaceutical Systems	144
4.1. Electron Energy Loss Spectroscopy (EELS)	145
4.1.1. Low-loss EELS	146
4.1.2. Core-loss EELS	149
4.2. Energy-Filtered Transmission Electron Microscopy (EFTEM)	150
4.2.1. Two-Dimensional Elemental Maps	151
4.2.2. The Plasmon to Carbon Ratio (PCR) Technique	151
4.3. Energy-Dispersive X-ray Spectroscopy (EDXS)	154
5. Practical Application and Examples	155
5.1. Microparticles and Nanoparticles	155
5.1.1. General Aspects	155
5.1.2. Examples of the Use of EM Techniques	159
5.2. Lipid-based Nanocarriers: SLNs and LNCs	168
5.2.1. General Aspects	168
5.2.2. Examples of the Use of EM Techniques	169
5.3. Micellar Systems	172
5.3.1. General Aspects	172
5.3.2. Examples of the Use of EM Techniques	173
5.4. Vesicular Systems	173
5.4.1. General Aspects	173
5.4.2. Examples of the Use of EM Techniques	175
5.5. Liquid Crystals and Microemulsions	179
5.5.1. General Aspects	179
5.5.2. Examples of the Use of EM Techniques	181

5.6. Emulsions and Nanoemulsions	186
5.6.1. <i>General Aspects</i>	186
5.6.2. <i>Examples of the Use of EM Techniques</i>	188
5.7. Nanofibers and Further Nanostructured Systems	191
5.7.1. <i>General Aspects</i>	191
5.7.2. <i>Examples of the Use of EM Techniques</i>	191
6. Conclusions	195
Acknowledgments	195
