**PART A**

<b>Preface: Advances in Cryogenic Engineering</b>	
Peter Shirron and Wilfried Goldacker	1
<b>CEC Awards</b>	2
<b>2013 Cryogenic Engineering Conference Board</b>	5
<b>CEC Technical Editors</b>	6
<b>Acknowledgments</b>	7

**FLUID MECHANICS AND HEAT TRANSFER I**

<b>Natural circulation loop using liquid nitrogen for cryo-detection system</b>	
Yeon Suk Choi	9
<b>Effect of corrugated characteristics on the liquid nitrogen temperature field of HTS cable</b>	
Z. M. Li, Y. X. Li, Y. Q. Zhao, C. Gao, M. Qiu, G. F. Chen, M. Q. Gong, and J. F. Wu	15
<b>Experimental study on the secondary evaporator of a cryogenic loop heat pipe</b>	
Ya-nan Zhao, Tao Yan, Jian-guo Li, Juan Wang, and Jingtao Liang	20
<b>A helium based pulsating heat pipe for superconducting magnets</b>	
Luis Diego Fonseca, Franklin Miller, and John Pfotenhauer	28
<b>Forced flow heat transfer of supercritical hydrogen for superconductor cooling</b>	
M. Shiotsu, Y. Shirai, H. Tatsumoto, K. Hata, H. Kobayashi, Y. Naruo, and H. Inatani	36
<b>Forced convection heat transfer of saturated liquid hydrogen in vertically-mounted heated pipes</b>	
Hideki Tatsumoto, Yasuyuki Shirai, Masahiro Shiotsu, Koichi Hata, Yoshihiro Naruo, Hiroaki Kobayashi, and Yoshifumi Inatani	44

<b>HYDROGEN SYSTEMS</b>			
<b>Liquid hydrogen target for the COMPASS experiment</b> J. Bremer, N. Doshita, L. Dufay-Chanat, R. Geyer, G. K. Mallot, O. Pirotte, and B. Vullierme	52	<b>Sorption-based vibration-free cooler for the METIS instrument on E-ELT</b> Y. Wu, C. H. Vermeer, H. J. Holland, J. Doornink, B. Benthem, E. Boom, and H. J. M. ter Brake	142
<b>Thin-thick hydrogen target for nuclear physics</b> J.-M. Gheller, I. Vinyar, F.-P. Juster, G. Authelet, J. Relland, and C. Commeaux	58	<b>Mixed-refrigerant Joule-Thomson (MR JT) mini-cryocoolers</b> Nir Tzabar	148
<b>Operational characteristics of the J-PARC cryogenic hydrogen system for a spallation neutron source</b> Hideki Tatsumoto, Kiichi Ohtsu, Tomokazu Aso, Yoshihiko Kawakami, and Makoto Teshigawara	66	<b>Investigation of pressure drop in capillary tube for mixed refrigerant Joule-Thomson cryocooler</b> P. M. Ardhapurkar, Arunkumar Sridharan, and M. D. Atrey	155
<b>Investigation on the two-stage active magnetic regenerative refrigerator for liquefaction of hydrogen</b> Inmyong Park, Youngkwon Kim, Jiho Park, and Sangkwon Jeong	74	<b>On the possible cycles via the unified perspective of cryocoolers. Part A: The Joule-Thomson cryocooler</b> Ben-Zion Maytal and John M. Pfotenhauer	163
<b>Hydrogen cooling options for MgB<sub>2</sub>-based superconducting systems</b> W. Stautner, M. Xu, S. Mine, and K. Amm	82	<b>On the reachable cycles via the unified perspective of cryocoolers. Part B: Cryocoolers with isentropic expanders</b> Ben-Zion Maytal and John M. Pfotenhauer	171
<b>INSTRUMENTATION I</b>			
<b>Analysis of the failures and corrective actions for the LHC cryogenics radiation tolerant electronics and its field instruments</b> Christoph Balle, Juan Casas, and Nicolas Vauthier	91	<b>Cryogenic system for the Cryomodule Test Facility at Fermilab</b> Michael White, Alex Martinez, Rick Bossert, Andrew Dalesandro, Michael Geynisman, Benjamin Hansen, Arkadiy Klebaner, Jerry Makara, Liujin Pei, Dave Richardson, William Soyars, and Jay Theilacker	179
<b>Optical cryostat realizations at Absolut System</b> T. Trollier, A. Ravex, and J. Tanchon	99	<b>Upgrade of the cryogenic CERN RF test facility</b> O. Pirotte, V. Benda, O. Brunner, V. Inglese, T. Koettig, P. Maesen, and B. Vullierme	187
<b>Automatic sample Dewar for MX beam-line</b> T. Charignon, J. Tanchon, T. Trollier, A. Ravex, and P. Theveneau	105	<b>Development of the cryogenic system of AEgIS at CERN</b> J. H. Derking, J. Bremer, G. Burghart, M. Doser, A. Dudarev, and S. Haider	195
<b>Using a cold radiometer to measure heat loads and survey heat leaks</b> M. DiPirro, J. Tuttle, T. Hait, and P. Shirron	110	<b>Progress update on cryogenic system for ARIEL E-linac at TRIUMF</b> A. Koveshnikov, I. Bylinskii, G. Hodgson, and D. Yosifov	201
<b>Effects of electrostatic discharge on three cryogenic temperature sensor models</b> S. Scott Courts and Thomas B. Mott	118	<b>Cryogenic system for BERLinPro</b> W. Anders, A. Hellwig, J. Knobloch, D. Pflückhahn, and S. Rotterdam	207
<b>Study of robust thin film PT-1000 temperature sensors for cryogenic process control applications</b> R. Ramalingam, D. Boguhn, H. Fillinger, S. I. Schlachter, and M. Süßer	126	<b>A cryogenic test stand for large superconducting solenoid magnets</b> R. Rabehl, R. Carcagno, J. Nogiec, D. Orris, W. Soyars, and C. Sylvester	215
<b>JT COOLERS</b>			
<b>Thermodynamic analysis of cascade microcryocoolers with low pressure ratios</b> Ray Radabaugh	132	<b>Design parameters and commissioning of vertical inserts used for testing the XFEL superconducting cavities</b> J. Schaffran, Y. Bozhko, B. Petersen, D. Meissner, M. Chorowski, and J. Polinski	223

<b>New vertical cryostat for the high field superconducting magnet test station at CERN</b>	229	<b>Cryogenic system for the MYRRHA superconducting linear accelerator</b>	315
A. Vande Craen, S. Atieh, M. Bajko, V. Benda, G. de Rijk, G. Favre, C. Giloux, P. Hanzelka, P. Minginette, V. Parma, P. Perret, O. Pirotte, D. Ramos, and P. Viret		Nicolas R. Chevalier, Tomas Junquera, Jean-Pierre Thermeau, Luis Medeiros Romão, and Dirk Vandeplassche	
<b>Selection of components for the IDEALHY preferred cycle for the large scale liquefaction of hydrogen</b>	237	<b>Application of JLab 12GeV helium refrigeration system for the FRIB accelerator at MSU</b>	323
H. Quack, I. Seemann, M. Klaus, Ch. Haberstroh, D. Berstad, H. T. Walnum, P. Neksa, and L. Decker		V. Ganni, P. Knudsen, D. Arenius, and F. Casagrande	
<b>SUPERFLUID HELIUM</b>		<b>The Hall D solenoid helium refrigeration system at JLab</b>	329
<b>Does one need a 4.5 K screen in cryostats of superconducting accelerator devices operating in superfluid helium? Lessons from the LHC</b>	245	N. Laverdure, J. Creel, K. Dixon, V. Ganni, F. Martin, R. Norton, and S. Radovic	
Philippe Lebrun, Vittorio Parma, and Laurent Tavian		<b>Conceptual design of the JT-60SA cryogenic system</b>	337
<b>Development of a He<sup>3</sup>-He<sup>4</sup> sub Kelvin active magnetic regenerative refrigerator (AMRR) with no moving parts</b>	253	V. Lamaison, J. Beauvisage, P. Fejoz, S. Girard, R. Gonvalves, R. Gondé, V. Heloin, F. Michel, C. Hoa, K. Kamiya, P. Roussel, J-C. Vallet, M. Wanner, and K. Yoshida	
A. E. Jahromi and F. K. Miller		<b>Commissioning of the liquid nitrogen thermo-siphon system for NASA-JSC Chamber-A</b>	345
<b>Transient heat transfer in helium II due to a sudden vacuum break</b>	260	J. Homan, M. Montz, V. Ganni, A. Sidi-Yekhlef, P. Knudsen, S. Garcia, and J. Garza	
Ernesto S. Bosque, Ram C. Dhuley, and Steven W. Van Sciver		<b>PULSE TUBE AND STIRLING CRYOCOOLERS (AEROSPACE) I</b>	
<b>Effect of geometry of film flow passage in superfluid heat pipe on heat transfer</b>	268	<b>TIRS cryocooler: Spacecraft integration and test and early flight data</b>	352
Suguru Takada, Soh Ishii, and Masahide Murakami		R. Boyle and E. Marquardt	
<b>Continuous flow system for controlling phases separation near <math>\lambda</math> transition</b>	276	<b>Microcryocooler for tactical and space applications</b>	357
M. Chorowski, J. Poliński, W. Kempinski, Z. Trybuła, Sz. Łoś, K. Chołast, and A. Kociemba		J. R. Olson, P. Champagne, E. Roth, T. Nast, E. Saito, V. Loung, A. C. Kenton, and C. L. Dobbins	
<b>Transient helium II heat transfer through random packed spheres</b>	285	<b>Small high cooling power space cooler</b>	365
Mark H. Vanderlaan and Steven W. Van Sciver		T. V. Nguyen, J. Raab, D. Durand, and E. Tward	
<b>Visualization study of bubble generation and collapse in He II under microgravity condition</b>	292	<b>Raytheon's next generation compact inline cryocooler architecture</b>	371
Suguru Takada, Nobuhiro Kimura, Mikito Mamiya, Takahiro Okamura, Masakazu Nozawa, and Masahide Murakami		B. R. Schaefer, L. Bellis, M. J. Ellis, and T. Conrad	
<b>Effect of tracer particles-quantized vortices interaction on PIV measurement result</b>	300	<b>High efficiency pulse tube cryocoolers for aerospace applications</b>	378
Masahide Murakami		Haizheng Dang	
<b>LARGE SCALE REFRIGERATION AND LIQUEFACTION I</b>		<b>Studies on an improved indigenous pressure wave generator and its testing with a pulse tube cooler</b>	
<b>Commissioning of a 20 K helium refrigeration system for NASA-JSC Chamber-A</b>	307	S. Jacob, R. Karunanithi, G. S. V. L. Narsimham, J. Kumar Kranthi, C. Damu, T. Praveen, M. Samir, and A. Mallappa	386
J. Homan, R. Redman, V. Ganni, A. Sidi-Yekhlef, P. Knudsen, R. Norton, J. Lauterbach, R. Linza, and G. Vargas		<b>LTS MAGNET SYSTEMS I</b>	
<b>Fabrication and assembly of a superconducting undulator for the advanced photon source</b>		Quentin Hasse, J. D. Fuerst, Y. Ivanyushenkov, C. Doose, M. Kasa, Y. Shiroyanagi, E. M. Trakhtenberg, and D. Skiadopoulos	392

<b>Study of thermosiphon cooling scheme for the production solenoid of the Mu2e experiment at Fermilab</b> N. Dhanaraj, V. Kashikhin, T. Peterson, V. Pronskikh, and T. Nicol	400	<b>Experimental performance of MLI blanket density and compression effects for use in GE MRI cryostat design</b> J. E. Pienkos, S. W. VanSciver, D. Celik, and R. J. Klimas	479
<b>Cryogenic performance of a conduction-cooling splittable quadrupole magnet for ILC cryomodules</b> N. Kimura, N. Andreev, V. S. Kashikhin, J. Kerby, M. Takahashi, M. A. Tartaglia, T. Tosaka, and A. Yamamoto	407	<b>Load responsive multilayer insulation performance testing</b> S. Dye, A. Kopelove, and G. L. Mills	487
<b>Design of large aperture superferric quadrupole magnets for an in-flight fragment separator</b> Aziz Zaghoul, Dogyun Kim, Jangyoul Kim, Mijung Kim, Myeongjin Kim, Chongcheoul Yun, and Jongwon Kim	416	<b>Temperature matching of multilayer insulation to penetrations</b> W. L. Johnson, D. W. Plachta, N. O. Rhys, and A. O. Kelly	493
<b>Short initial length quench on CICC of ITER TF coils</b> S. Nicollet, D. Bessette, D. Ciazzynski, M. Coatanea-Gouachet, J.-L. Duchateau, F. Gauthier, B. Lacroix, and F. Rodriguez-Mateos	422	<b>Emissivity measurement of coated copper and aluminum samples at 80 K</b> S. H. Kim, Z. A. Conway, P. N. Ostroumov, and K. W. Shepard	500
<b>Quench protection analysis of the Mu2e production solenoid</b> Vadim Kashikhin, Giorgio Ambrosio, Nikolai Andreev, Michael Lamm, Thomas Nicol, Darryl Orris, and Thomas Page	430	<b>PULSE TUBE AND STIRLING CRYOCOOLERS (AEROSPACE) II</b>	
<b>Performance of a superconducting magnet system operated in the Super Omega Muon beam line at J-PARC</b> Yasuhiro Makida, Yutaka Ikeda, Toru Ogitsu, Koichiro Shimomura, Yasuhiro Miyake, Makoto Yoshida, Taihei Adachi, Ryosuke Kadono, Naritoshi Kawamura, Patric Strasser, Akihiro Koda, Hiroshi Fujimori, Kusuo Nishiyama, Hirokatsu Ohhata, Takahiro Okamura, Ryutaro Okada, and Tomofumi Orikasa	438	<b>Experimental study on a co-axial pulse tube cryocooler driven by a small thermoacoustic stirling engine</b> M. Chen, L. Y. Ju, and H. X. Hao	507
<b>THERMAL INSULATION SYSTEMS</b>			
<b>Upgrade of the LHC magnet interconnections thermal shielding</b> Andrea Musso, Graeme Barlow, Alain Bastard, Maryline Charondiere, Anna Chrul, Dimitrios Damianoglou, Guy Deferne, Gaëlle Dib, Max Duret, Michael Guinchard, Hervé Prin, Michał Strychalski, Arnaud Vande Craen, Gilles Villiger, and Loren Wright	448	<b>The influence of Reynolds numbers on resistance properties of jet pumps</b> Q. Geng, G. Zhou, and Q. Li	514
<b>Electrically insulated MLI and thermal anchor</b> Koji Kamiya, Masato Furukawa, Ryuta Hatakenaka, Takeshi Miyakita, Haruyuki Murakami, Kaname Kizu, Katsuhiko Tsuchiya, Yoshihiko Koidea, and Kiyoshi Yoshida	455	<b>Pulse tube coolers for Meteosat third generation</b> James Butterworth, Gérald Aigouy, Clément Chassaing, Benoît Debray, and Alexandre Huguet	520
<b>Cryogenic insulation standard data and methodologies</b> J. A. Demko, J. E. Fesmire, W. L. Johnson, and A. M. Swanger	463	<b>150K - 200K miniature pulse tube cooler for micro satellites</b> Clément Chassaing, James Butterworth, Gérald Aigouy, Christophe Daniel, Maurice Crespin, and Eric Duvivier	525
<b>Thermal degradation of multilayer insulation due to the presence of penetrations</b> W. L. Johnson, A. O. Kelly, and J. E. Fesmire	471	<b>15 K pulse tube design for ECHO mission</b> J. M. Duval, I. Charles, C. Chassaing, J. Butterworth, G. Aigouy, and J. Mullié	533
<b>REGENERATORS</b>			
<b>Comparison of different regenerator geometries for AMR system</b> Jing Li, T. Numazawa, K. Matsumoto Matsumoto, Y. Yanagisawa, and H. Nakagome	548	<b>Evaluation of cryogenic liquids ZBO storage with different solutions</b> Yangyang Zhang, Jianguo Li, Baojun Luo, Juan Wang, and Guotong Hong	540
<b>Hydrodynamic resistance parameters for ErPr rare-earth regenerator material under steady and periodic flow conditions</b> M. G. Pathak, B. P. Helvensteijn, V. C. Patel, S. M. Ghiaasiaan, T. I. Mulcahey, A. Kashani, and J. R. Feller	555		

<b>Effect of flow-pressure phase on performance of regenerators in the range of 4 K to 20 K</b>	562	<b>Waste heat recovery from the European Spallation Source cryogenic helium plants - implications for system design</b>	647
M. A. Lewis, R. P. Taylor, P. E. Bradley, and R. Radebaugh		John M. Jurns, Harald Bäck, and Martin Gierow	
<b>Advanced regenerator testing in the Raytheon dual-use cryocooler</b>	570	<b>The cryomodule test stand at the European Spallation Source</b>	655
B. R. Schaefer, L. Bellis, M. J. Ellis, and T. J. Conrad		W. Hees, J. G. Weisend II, X. L. Wang, and T. Köttig	
<b>Performance of a 260 Hz pulse tube cooler with metal fiber as the regenerator material</b>	576	<b>Challenges and design solutions of the liquid hydrogen circuit at the European Spallation Source</b>	659
Xiaotao Wang, Shuang Zhang, Guoyao Yu, Wei Dai, and Ercang Luo		S. Gallimore, P. Nilsson, P. Sabbagh, A. Takabayev, J. G. Weisend II, Y. Beßler, and M. Klaus	
<b>Realization of the cooperation between traveling wave component and standing wave component in thermoacoustic regenerator</b>	582	<b>The ESS spoke cavity cryomodules</b>	665
Zhou Gang and Li Qing		Sebastien Bousson, Christine Darve, Patxi Duthil, Nuno Elias, Steve Molloy, Denis Reynet, and Jean-Pierre Thermeau	
<b>FLUID MECHANICS AND HEAT TRANSFER II</b>			
<b>The total hemispheric emissivity of painted aluminum honeycomb at cryogenic temperatures</b>	590	<b>LARGE SCALE REFRIGERATION AND LIQUEFACTION II</b>	
J. Tuttle, E. Canavan, M. DiPirro, X. Li, and P. Knollenberg		<b>Cryogenic performance and numerical modeling of a helium refrigerator for the JT-60SA coil test facility</b>	673
<b>Characteristic evaluation of cooling technique using liquid nitrogen and metal porous media</b>	597	Alexandre Serrand, Walid Abdel-Maksoud, Laurent Genini, and François-Paul Juster	
Yusuke Tanno, Satoshi Ito, and Hidetoshi Hashizume		<b>Process design of helium refrigerators collaborated with the predesign of turbo expander</b>	681
<b>Unsteady heat dissipation in accelerator superconducting coils insulated with porous ceramic insulation in normal and supercritical helium conditions</b>	605	L. Y. Xiong, N. Peng, B. Dong, J. C. Tang, and L. Q. Liu	
S. Pietrowicz, A. Four, B. Baudouy, N. Kimura, and A. Yamamoto		<b>Process model and capacity upgrades of the CTI-4000 liquid helium coldbox</b>	687
<b>Microchannel heat exchanger for two-phase Mixed Refrigerant Joule Thomson process</b>	612	Benjamin Hansen, Hans Quack, and Arkadiy Klebaner	
Seungwhan Baek, Jisung Lee, Cheonkyu Lee, and Sangkwan Jeong		<b>MULTILAYER INSULATION SYSTEMS</b>	
<b>Modeling results for the ITER cryogenic fore pump</b>	618	<b>Measurements of the apparent thermal conductivity of multi-layer insulation between 20 K and 90 K</b>	694
D. S. Zhang, F. K. Miller, and J. M. Pfotenhauer		Joseph A. Hurd and Steven W. Van Sciver	
<b>Cryodeposition of nitrogen gas on a surface cooled by helium II</b>	626	<b>Calorimeter testing of thermal degradation of multilayer insulation due to the presence of penetrations</b>	701
R. C. Dhuley, E. S. Bosque, and S. W. Van Sciver		W. L. Johnson, A. O. Kelly, K. W. Heckle, K. M. Jumper, and J. E. Fesmire	
<b>EUROPEAN SPALLATION SOURCE</b>			
<b>Status of the ESS cryogenic system</b>	633	<b>Simulation of MLI concerning the influence of an additional heat load on intermediate layers</b>	708
J. G. Weisend II, C. Darve, S. Gallimore, W. Hees, J. Jurns, T. Köttig, P. Ladd, S. Molloy, T. Parker, and X. L. Wang		Thomas Funke, Steffen Golle, and Christoph Haberstroh	
<b>The ESS elliptical cavity cryomodules</b>	639	<b>Thermal performance study for hybrid SOFI and MLI system used in space</b>	716
Christine Darve, Pierre Bosland, Guillaume Devanz, Gilles Olivier, Bertrand Renard, and Jean-Pierre Thermeau		Xue Xiaodai, Wang Sixian, Cui Chen, Wang Junjie, and Zhou Yuan	
<b>Study on a fast loading high vacuum multilayer insulation (MLI)</b>		<b>Study on a fast loading high vacuum multilayer insulation (MLI)</b>	720
Xian Shen, Sheng Zhang, Bo Wang, Zhihu Gan, Jianming Ying, and Chunlin Zhang			

<b>Thermal coupon testing of Load-Bearing Multilayer Insulation</b> W. L. Johnson, K. W. Heckle, and J. Hurd	725	<b>Capture cavity cryomodule for quantum beam experiment at KEK superconducting RF test facility</b> K. Tsuchiya, K. Hara, H. Hayano, E. Kako, Y. Kojima, Y. Kondo, H. Nakai, S. Noguchi, N. Ohuchi, A. Terashima, A. Horikoshi, and T. Semba	803
<b>HTS MAGNET SYSTEMS</b>			
<b>Repairing and upgrading of the HTS insert in the 18T cryogen-free superconducting magnet</b> S. Awaji, H. Oguro, K. Watanabe, S. Hanai, S. Ioka, H. Miyazaki, M. Daibo, Y. Iijima, T. Saito, and M. Itoh	732	<b>The high Beta cryo-modules and the associated cryogenic system for the HIE-ISOLDE upgrade at CERN</b> N. Delruelle, Y. Leclercq, O. Pirotte, D. Ramos, P. Tibaron, G. Vandoni, and L. Williams	811
<b>Design and development of a MgB<sub>2</sub>-based sector dipole and beam transport channel for a strong-focusing cyclotron</b> K. Melconian, K. Damborsky, N. Glasser, E. Holik, J. Kellams, P. McIntyre, N. Pogue, and A. Sattarov	739	<b>Two low-cost, modular sub-λ test cryostats</b> J. D. Fuerst and J. A. Kaluzny	819
<b>The preliminary study of the quench protection of an MgB<sub>2</sub></b> F. P. Juster, C. Berriaud, A. Bonelli, R. Pasquet, H. Przybilski, T. Schild, and L. Scola	746	<b>Design and fabrication considerations for stainless steel liquid helium jackets surrounding SCRF cavities</b> E. C. Bonnema, E. K. Cunningham, and J. D. Rumel	827
<b>Fabrication of 1 T Bi-2223 superconducting magnet with 92 mm bore diameter at 77 K</b> Edmund S. Otabe, Vladimir S. Vyatkin, Masaru Kiuchi, Teruo Matsushita, Baorong Ni, Takeshi Kato, Takashi Nishimura, and Ryota Uetsuki	754	<b>ITER</b>	
<b>THERMOACOUSTIC REFRIGERATORS AND DRIVES</b>		<b>Using fiberglass volumes for VPI of superconductive magnetic systems' insulation</b> I. S. Andreev, A. A. Bezrukov, A. S. Bursikov, Y. A. Klimchenko, E. L. Marushin, A. A. Mednikov, A. B. Pischugin, I. Y. Rodin, and D. B. Stepanov	834
<b>Simulation studies on the standing and traveling wave thermoacoustic prime movers</b> Mathew Skaria, K. K. Abdul Rasheed, K. A. Shafi, S. Kasthurirengan, and Upendra Behera	760	<b>Flow distribution analysis on the cooling tube network of ITER thermal shield</b> Kwanwoo Nam, Wooho Chung, Chang Hyun Noh, Dong Kwon Kang, Kyoung-O Kang, Hee Jae Ahn, and Hyeon Gon Lee	840
<b>Experimental studies of the influence of Prandtl number on the performance of a thermoacoustic prime mover</b> B. V. Kamble, B. T. Kuzhivel, Rishabh Jain, S. Prasad, S. Kasthurirengan, and U. Behera	768	<b>Progress and present status of ITER cryoline system</b> S. Badgugar, M. Bonneton, M. Chalifour, A. Forgeas, L. Serio, B. Sarkar, and N. Shah	848
<b>Transient phenomena in a low cooling thermoacoustic refrigerator</b> R. C. Dhuley and M. D. Atrey	776	<b>Investigation of various methods for heat load measurement of ITER prototype cryoline</b> N. D. Shah, B. Sarkar, K. Choukellar, R. Bhattacharya, and Uday Kumar	856
<b>Experimental studies on thermoacoustic engine with gaseous mixtures</b> V. Ushir, K. P. Desai, H. B. Naik, and M. D. Atrey	784	<b>Evaluation of static mixer flow enhancements for cryogenic viscous compressor prototype for ITER vacuum system</b> Robert C. Duckworth, Larry R. Baylor, Steven J. Meitner, Stephen K. Combs, Tam Ha, Michael Morrow, T. Biewer, David A. Rasmussen, Michael P. Hechler, Robert J. H. Pearce, Mattias Dremel, and J.-C. Boissin	864
<b>SRF SYSTEMS I</b>			
<b>Project X superconducting spoke resonator test cryostat 2 K conversion</b> M. Chen, A. Dalesandro, B. Hansen, A. Klebaner, T. Nicol, Y. Orlov, and T. Peterson	790	<b>Performance evaluation approach for the supercritical helium cold circulators of ITER</b> H. Vaghela, B. Sarkar, R. Bhattacharya, H. Kapoor, M. Chalifour, H.-S. Chang, and L. Serio	872
<b>Design approach for the development of a cryomodule for compact crab cavities for Hi-Lumi LHC</b> Shrikant Pattalwar, Thomas Jones, Niklas Templeton, Philippe Goudket, Peter McIntosh, Alan Wheelhouse, Graeme Burt, Ben Hall, Loren Wright, and Tom Peterson	795		

## DISTRIBUTION SYSTEMS

### **FRIB cryogenic distribution system**

V. Ganni, K. Dixon, N. Laverdure, P. Knudsen, D. Arenius, M. Barrios, S. Jones, M. Johnson,  
and F. Casagrande 880

### **Choice of flexible cryostat for 2.5 km DC HTS cable to be laid in St. Petersburg**

Yury V. Ivanov, Maxim A. Romashov, Sergey E. Bemert, and Victor E. Sytnikov 887

### **Characterization of flexible transfer lines for liquid helium. New experimental results**

N. Dittmar, Ch. Haberstroh, and U. Hesse 893

### **Linac cryogenic distribution system maintenance and upgrades at JLab**

K. Dixon, M. Wright, and V. Ganni 900
