

# Contents

<b>1 Stochastic Kinetics: Why and How? .....</b>	1
1.1 Chemical Kinetics: A Prototype of Nonlinear Science .....	1
1.1.1 The Power Law and Mass Action Type Deterministic Model of Homogeneous Reaction Kinetics .....	3
1.1.2 Stationary States and Their Stability .....	11
1.2 Applicability of the Deterministic Model .....	11
1.3 Fluctuation Phenomena.....	13
1.3.1 Brownian Motion .....	13
1.3.1.1 Diffusion .....	14
1.3.1.2 Fluctuation-Dissipation Theorem .....	16
1.3.1.3 Towards the Theory of Stochastic Processes .....	17
1.3.1.4 Experimental Determination of the Avogadro Constant .....	17
1.4 Stochastic Chemical Kinetics .....	17
1.4.1 Model Framework: Preliminary Remarks .....	17
1.4.2 Historical Remarks.....	18
1.4.3 On the Solutions of the Stochastic Kinetic Models: Analytical Calculations Versus Simulations .....	19
1.4.4 The Renaissance of Stochastic Kinetics: Systems Biology .....	19
References .....	20
<b>2 Continuous Time Discrete State Stochastic Models .....</b>	25
2.1 Model Frameworks .....	25
2.2 Stochastic Processes .....	26
2.2.1 Definition .....	26
2.2.2 Time and State Space .....	27
2.2.3 Important Types of Stochastic Processes .....	27
2.2.4 Markov Chains .....	28

	2.2.5 Continuous Time Discrete State Markov Process .....	31
	2.2.6 Semi-Markov Processes .....	34
2.3	The Standard Stochastic Model of Homogeneous Reaction Kinetics .....	35
	2.3.1 State Space: Size and Enumeration .....	36
	2.3.2 Master Equation .....	38
	2.3.3 Connection Between Deterministic and Stochastic Kinetics: Similarities and Differences .....	41
	2.3.4 Stochastic Maps .....	44
2.4	Solutions of the Master Equation .....	45
	2.4.1 What Do We Mean by Exact Analytical Solutions?.....	45
	2.4.2 Direct Matrix Operations .....	45
	2.4.3 Time-Independent $Q$ -Functions .....	47
	2.4.4 Laplace Transformation .....	48
	2.4.5 Generating Functions .....	49
	2.4.6 Poisson Representation .....	50
	2.4.7 Mathematical Induction.....	53
	2.4.8 Initial Conditions Given with a Probability Distribution...	53
	2.4.9 Time Scales.....	54
2.5	Stationary and Transient Distributions .....	54
	2.5.1 Stationary Distributions.....	54
	2.5.2 Transient Distributions.....	56
	2.5.3 Properties of Stationary and Transient Distributions: Unimodality Versus Multimodality .....	56
2.6	Simulation Methods .....	58
2.7	Deterministic Continuation .....	62
2.8	Continuous State Approximations .....	63
2.9	Non-Markovian Approaches .....	66
	References .....	67
<b>3</b>	<b>Applications .....</b>	<b>71</b>
	3.1 Introductory Remarks .....	71
	3.2 Fluctuations Near Instabilities .....	72
	3.2.1 Stochastic Chemical Reaction: A Simple Example .....	72
	3.2.1.1 Keizer's Paradox .....	73
	3.2.2 Stochastic Theory of Bistable Reactions.....	74
	3.2.2.1 Schlögl Reaction of the First-Order Phase Transition .....	74
	3.2.2.2 Time Spent in Each Steady State, and Time Scale of Transitions.....	75
	3.2.2.3 The <i>lac</i> Operon Genetic Network.....	78
3.3	Compartmental Systems.....	78
	3.3.1 Model Frameworks .....	78
	3.3.2 Master Equation and State Space .....	80
	3.3.3 Solutions .....	81

	3.4 Autocatalysis.....	84
	3.4.1 Autocatalytic Extinction .....	85
	3.4.2 Time Dependence of the Crazy Clock Reaction .....	87
	3.4.3 Autocatalytic Cycle Process .....	88
3.5	Enzyme Kinetics.....	91
	3.5.1 Michaelis–Menten: Scheme and State Space .....	91
	3.5.2 Michaelis–Menten: Solutions .....	92
	3.5.3 Other Enzyme Systems .....	99
3.6	Signal Processing .....	101
	3.6.1 Signaling with Chemical Networks: General Remarks ...	101
	3.6.2 Signal Processing in Biochemical Networks .....	102
	3.6.2.1 Evaluation of Signal Transfer by Mutual Information .....	102
	3.6.2.2 Impact of Network Structure on the Transmission .....	104
	3.6.2.3 Further Studies.....	107
	3.6.3 Signal Processing in Olfactory Systems .....	110
	3.6.3.1 Fisher Information and Optimal Signal Transmission .....	110
	3.6.3.2 Stochastic Kinetic Models of Odor Intensity Detection.....	110
	3.6.3.3 Estimation of Optimal Olfactory Signals.....	112
	3.6.4 Calcium Signaling .....	114
3.7	Gene Expression .....	116
	3.7.1 A Very, Very Short Review of Biochemical Background ..	116
	3.7.2 Measurement of Noise in Genetic and Other Biochemical Networks.....	117
	3.7.3 Stochastic Kinetic Models of Gene Expression .....	118
	3.7.3.1 General Remarks .....	118
	3.7.3.2 A Three-Stage Model of Gene Expression .....	118
	3.7.3.3 Separating Intrinsic from Extrinsic Fluctuations .....	120
3.8	Chiral Symmetry .....	122
	3.8.1 Racemic Mixtures .....	122
	3.8.2 Simple Enantioselective Autocatalysis.....	125
	3.8.3 The Frank Model.....	129
	3.8.4 The Soai Reaction.....	130
3.9	Parameter Estimation in Stochastic Kinetic Models .....	132
	3.9.1 Estimation of Rate Constants from Equilibrium Fluctuations .....	132
	3.9.2 Parameter Estimation for Stochastic Kinetic Models: Beyond the Fluctuation-Dissipation Theorem .....	133
3.10	Stochastic Resonance in Chemical Systems.....	135
	3.10.1 General Remarks .....	135

3.10.2 Stochastic Resonance in One- and Multi-parameter System .....	135
3.10.3 Stochastic Resonance of Aperiodic Signals .....	137
3.11 Computation with Small Stochastic Kinetic Systems.....	137
References .....	139
<b>4 The Book in Retrospect and Prospect .....</b>	<b>149</b>
References .....	156
