Preface *xix*

1. The Plasma Universe

1.1	Plasma, a Matter of State	1
1.2	Plasma, the First State of Matter	2
1.3	Plasma in Superclusters of Galaxies	5
1.4	Intergalactic Plasma	6
1.5	Galactic Plasma	9
1.6	Interstellar Plasma	10
1.7	Plasmas in Stars	11
1.8	Sun, a Plasma Laboratory	11
1.9	Solar Wind	15
1.10	Cometary Plasma	17
1.11	Planetary Plasma	19
1.12	Terrestrial Plasma	20
1.13	Earth's Magnetosphere	21
1.14	The Ionosphere	24
1.15	Plasmas in Laboratory	25
1.16	The Clean Energy	28
1.17	Thermonuclear Fusion	28
1.18	Magnetic Confinement Fusion	29
1.19	Inertial Confinement Fusion	30
1.20	Space Travel-Plasma Rockets	31

1.21	Plasma Accelerators	32	3.6	Motion of a Charged Particle in a Magnetic Field	62
1.22	Plasma Materials and Methods	34	3.7	Plasma in a Magnetic Field	65
1.23	Fully Ionized Plasma	35	3.8	Magnetostatic Equilibrium, the Z Pinch	66
1.24	Partially Ionized Plasma	36	3.9	Magnetostatic Equilibrium, the Θ Pinch	71
1.25	Ultracold Plasmas	36	3.10	Magnetostatic Force Free Equilibrium, the Reversed Field Pinch	71
1.26	Dusty Plasma	37	3.11	Magnetic Mirrors	75
1.27	Quantum Plasma	38	3.12	Confinement of Plasmas under Radiation Pressure	82
1.28	Techniques for Studying Plasmas	39	3.13	Inertial Confinement	84
1.29	Summary	40	3.14	Summary	86
	<i>Problems</i>	40		<i>Problems</i>	87
2. Plasma Basics			4. The Waving Plasmas		
2.1	Making Plasmas	41	4.1	Introduction	88
2.2	Plasma Formation by Photoionization	41	4.2	Single Fluid Description of a Plasma	89
2.3	Collisional Ionization	42	4.3	Ideal Magnetohydrodynamics	95
2.4	Thermal Ionization	43	4.4	Linear Waves in Ideal Magnetofluid	98
2.5	Pressure Ionization	45	4.5	Transverse MHD Waves: The Linear Alfvén Wave	99
2.6	Electric Discharge through Gases	45	4.6	Polarization of the Alfvén Waves	102
2.7	Critical Velocity Ionization	46	4.7	Energy Partition in the Alfvén Waves	103
2.8	Measuring Plasmas	46	4.8	Nonlinear Alfvén Waves	104
2.9	Plasma Specifics	48	4.9	Dissipation of the Alfvén Waves	105
2.10	Debye Screening	49	4.10	The Longitudinal Magnetohydrodynamic Waves	106
2.11	Plasma-Typical Time Scales	53	4.11	Polarization of the Fast Wave	108
2.12	The Plasma Parameter	54	4.12	Energy Partition in the Fast Wave	109
2.13	When is it a Plasma?	54	4.13	Dissipation of the Fast Wave	109
2.14	Summary	55	4.14	Oblique Propagation of Magnetoacoustic Waves	110
	<i>Problems</i>	55	4.15	Polarization of the Oblique Fast and Slow Waves	113
3. Plasma Confinement			4.16	Energy Partition in the Fast and the Slow Waves	114
3.1	Introduction	56	4.17	Dissipation of the Oblique Fast and the Slow Waves	114
3.2	The Grip of Gravity	56	4.18	Inclusion of the Displacement Current	115
3.3	Hydrostatic Equilibrium	59	4.19	Detection and Observation of the Magnetohydrodynamic Waves	117
3.4	Hydrodynamic Equilibrium	60	4.20	Waves in a Two-Fluid Description of a Plasma	117
3.5	Magnetic Bottles	62			

4.21	The Hall Wave	119
4.22	The Electron Plasma Waves	123
4.23	Polarization of the Electron Plasma Wave	126
4.24	Energy Partition in the Electron Plasma Wave	127
4.25	Dissipation of the Electron Plasma Wave	127
4.26	Inclusion of Thermal Pressure	129
4.27	Detection of the Electron Plasma Waves	131
4.28	Ion Acoustic Waves	132
4.29	The Plasma Approximation	136
4.30	Polarization of the Ion Acoustic Waves	137
4.31	Energy Partition in the Ion Acoustic Waves	137
4.32	Dissipation of the Ion Acoustic Wave	137
4.33	Detection of the Ion Acoustic Wave	138
4.34	Electrostatic Waves in Magnetized Fluids	138
4.35	The Upper Hybrid Wave	139
4.36	The Lower Hybrid Wave	142
4.37	Electrostatic Magneto-Ion Acoustic Waves in Magnetized Plasma	144
4.38	Electromagnetic Waves in an Unmagnetized Plasma	145
4.39	Electromagnetic Waves in Magnetized Plasmas	147
4.40	Ordinary Wave, $\vec{k} \perp \vec{B}_0$, $\vec{E}_1 \parallel \vec{B}_0$	148
4.41	Extraordinary Wave, $\vec{k} \perp \vec{B}_0$, $\vec{E}_1 \approx \perp \vec{B}_0$	149
4.42	Polarization of the Extraordinary Wave	151
4.43	Electromagnetic Waves Propagating along \vec{B}_0	151
4.44	Circularly Polarized Radiation	152
4.45	The Whistler Wave	153
4.46	The Faraday Rotation	154
4.47	Cutoff Frequencies of the Electromagnetic Waves	157
4.48	Resonances of the Electromagnetic Waves	158
4.49	Propagation Bands of the Electromagnetic Waves	159
4.50	Summary	163
	<i>Problems</i>	163

5. The Radiating Plasmas

5.1	Radiation and Plasmas	165
5.2	A Quick Revisit of Waves	165
5.3	Electromagnetic Radiation	167
5.4	Polarization of Electromagnetic Waves	170
5.5	Propagation of Electromagnetic Waves in a Plasma	175
5.6	Absorption of Electromagnetic Waves in a Plasma	181
5.7	Electron-Ion Collision Frequency	183
5.8	Generation of the Electromagnetic Radiation	185
5.9	Radiation from an Oscillating Electric Dipole	186
5.10	Radiation from an Accelerated Single Charged Particle	193
5.11	Relativistic Generalization of the Larmor Formula	199
5.12	Radiation Spectrum	203
5.13	In a Plasma	206
5.14	Radiation from Collisions between Charged Particles	207
5.15	Bremsstrahlung, Radiation Generated by Coulomb Collisions	209
5.16	Bremsstrahlung in a Plasma	209
5.17	Bremsstrahlung in a Thermal Plasma	211
5.18	Scattering of Radiation by Plasma Particles	213
5.19	Thomson Scattering	213
5.20	Scattering in a Plasma	217
5.21	Summary	220
	<i>Problems</i>	221

6. Supplementary Matter

6.1	Derivation of Eq. (3.11)	223
6.2	Collisional Processes	225
6.3	Derivation of Eq. (5.109)	228
6.4	Physical Constants	234
6.5	Electromagnetic Spectrum	235
6.6	Astrophysical Quantities	236
	6.6.1 Planets	236
	6.6.2 The Sun	236

6.6.3	The Milky Way	237
6.6.4	The Hubble Constant	237
6.6.5	Electron Density and Temperature of some of the Astrophysical Plasmas	237
6.7	Vector Identities	238
6.8	Differential Operations	240
6.8.1	Cartesian coordinates (x, y, z)	240
6.8.2	Cylindrical coordinates (r, θ, z)	241
6.8.3	Spherical coordinates (r, θ, φ)	243
	<i>Select Bibliography</i>	245
	<i>Index</i>	247
