CONTENTS

Preface v

CHAPTER 1 INTRODUCTION **1**
H. Araki

1 Schrödinger Operator 1
2 Scattering Theory 3
3 References 7

CHAPTER 2 TIME-PERIODIC SCHRÖDINGER EQUATIONS **9**
K. Yajima

1 Introduction 9
2 Existence and Uniqueness of Propagator 10
2.1 Autonomous case, self-adjointness 11
2.2 Nonautonomous case 13
2.2.1 Semigroup theory 13
2.2.2 The method of integral equations 14
3 Floquet Hamiltonian 19
4 Scattering Theory 24
4.1 RAGE theorem 24
4.2 Existence and completeness of wave operators 25
4.3 Scattering operator 30
4.4 Uniqueness of inverse scattering 31
5 Local Decay Property 33
5.1 Expansion for free Schrödinger equation 33
5.2 Threshold resonance, theorems 34
5.3 Threshold expansion of resolvent 35

5.4 Outline of proof of Theorem 5.3 . . . 37
6 Dispersive Estimates . . . 38
6.1 L^p-L^q estimates and Strichartz estimates . . . 38
6.2 Local smoothing estimate . . . 45
7 Instability of Bound States . . . 49
7.1 Resonance theory for time periodic systems . . . 50
7.2 Instability of bound states I, analytic case . . . 53
7.3 Fermi golden rule . . . 56
7.4 Instability of bound states II, non-analytic case . . . 60
Acknowledgements . . . 65
Bibliography . . . 65

CHAPTER 3 AN APPLICATION OF PHASE SPACE TUNNELING TO MULTISTATE SCATTERING THEORY **71**
1 Introduction – Main Theorem . . . 71
2 Preliminaries . . . 73
2.1 $\hbar$-pseudodifferential operators . . . 73
2.2 FBI transform . . . 75
2.3 Exponential weight estimates in phase space . . . 76
3 Scattering Matrix . . . 78
3.1 Construction of approximation systems: A_j $(j = 1, 2)$ . . . 79
3.2 Construction of identification map J . . . 80
3.3 Wave operators $W_\pm^1 = W_\pm(\tilde{A}, A_0; J)$ . . . 81
3.4 Spectral representation of $\tilde{A}$ on I . . . 83
3.5 Wave operators $W_\pm^2 = W_\pm(A, \tilde{A}; J^*)$ . . . 84
3.6 Representation formula of $S^2(\lambda)$ . . . 86
4 Exponential Estimates – Proof of Main Theorem . . . 87
Bibliography . . . 90

CHAPTER 4 INVERSE SPECTRAL THEORY **93**
H. Isozaki

Part I One-dimensional Problem . . . 94
1 Inverse Eigenvalue Problem . . . 94
1.1 Theorem of Borg–Levinson . . . 94
1.2 Global structure of isospectral potentials . . . 95
2 Isospectral Deformation . . . 96
3 Inverse Scattering . . . 98
3.1 Scattering problem . . . 98

3.2 Spherically symmetric potentials . . . 99
3.3 Gel'fand–Levitan theory . . . 100
3.4 Generalized sine transformation . . . 102
3.5 The core of Gel'fand–Levitan theory . . . 103
3.6 What is the hidden mechanism? . . . 104
Part II Multi-Dimensional Problem . . . 106
4 n-Dimensional Borg–Levinson Theorem . . . 106
5 Generalized Gel'fand Problem . . . 108
6 Kac Problem . . . 111
6.1 Isospectral manifolds . . . 112
6.2 Spectral invariants . . . 112
7 Overdeterminacy . . . 113
7.1 High energy Born approximation . . . 113
7.2 Time-dependent inverse scattering . . . 115
7.3 Overdeterminacy . . . 115
7.4 Inverse back scattering . . . 116
Part III Inverse Scattering in n-Dimensions . . . 116
8 Key Idea of Faddeev . . . 116
8.1 Spectral representation . . . 116
8.2 Higher dimensional Volterra operator . . . 117
8.3 Faddeev's Green operator . . . 118
9 Changing Green Operators . . . 121
10 Direction Dependent Green Operators . . . 123
11 Inverse Scattering at a Fixed Energy . . . 126
11.1 Perturbed Green operators . . . 126
11.2 Faddeev scattering amplitude . . . 127
11.3 Inverse scattering at a fixed energy . . . 128
11.4 Slowly decreasing potentials . . . 129
12 Faddeev Theory . . . 129
12.1 Exceptional points . . . 129
12.2 Factorization of S-matrix . . . 130
12.3 Volterra operator . . . 131
12.4 Gel'fand–Levitan equation . . . 132
13 $\overline{\partial}$-Approach . . . 133
14 Inverse Conductivity Problem . . . 135
15 Other Applications . . . 138
Bibliography . . . 139

CHAPTER 5 ANALYSIS OF GROUND STATES OF ATOMS INTERACTING WITH A QUANTIZED RADIATION FIELD 145
F. Hiroshima

1 Preliminaries 145
1.1 Perturbations of embedded eigenvalues 147
1.2 Positive temperatures 149
1.3 Organization 151
2 The Pauli–Fierz Model 152
2.1 Classical Hamiltonian in the Coulomb gauge 153
2.2 Fock representation 155
2.3 Second quantization 158
2.4 The Pauli–Fierz Hamiltonian 160
2.5 Examples and infrared singularities 161
3 The List of Problems 164
4 The Existence of Ground States 169
4.1 Ultraviolet cutoffs and domains 170
4.2 Self-adjointness for weak couplings 171
4.3 Positive spectral gap 171
4.4 Enhanced binding 184
4.5 Asymptotic fields 191
4.6 Scaling limits 194
4.7 Notes 195
5 Functional Integral Representations 198
5.1 Schrödinger representation 199
5.2 Decompositions of semigroups 202
5.3 Functional integral representation I 205
6 Self-Adjointness for Arbitrary $e \in \mathbb{R}$ 210
6.1 Self-adjoint extensions 210
6.2 Invariant domains 213
6.3 Self-adjointness 218
6.4 Functional integral representation II 220
7 Multiplicity 221
7.1 Positivity improving semigroups and uniqueness of a ground state 222
7.2 Degenerate ground states with singular potentials 227
7.3 Twofold degenerate ground states with spin 229
7.3.1 Fixed total momentum 230

7.3.2 External potentials 237
8 Ground State Energy, Charge Density and Effective Mass 238
8.1 Ground state energy 238
8.2 Charge density in ground states 239
8.3 Effective mass and mass renormalization 241
9 Gibbs Measures 244
9.1 Infinite volume Gibbs measures 244
9.2 Kolmogorov extension theorem 245
9.3 Expectation values 248
10 The Nelson Model 252
10.1 The Nelson Hamiltonian 252
10.2 Functional integral representations for the Nelson model . . 253
10.3 Superexponential decay and infrared singularities 256
10.4 Boson density 263
10.5 Notes 265
Acknowledgements 265
Bibliography 265
Index 273
