CONTENTS

PART I THE EMERGENCE AND BREAKDOWN OF COMPLEXITY

FEATURES OF COMPLEXITY 3

by Ronnie Kosloff

EXPLORING QUANTUM-CLASSICAL BOUNDARY 19

by Kenji Ohmori

TRANSITION FROM ATOMS TO CLUSTERS TO CONDENSED MATTER 25

by Julius Jellinek

FREE ENERGIES OF STAGING A SCENARIO AND PERPETUAL MOTION MACHINES OF THE THIRD KIND 43

by Peter Salamon, Bjarne Andresen, Karl Heinz Hoffmann, James D. Nulton, Anca M. Segall, and Forest L. Rohwer

FINITE-TIME THERMODYNAMICS TOOLS TO ANALYZE DISSIPATIVE PROCESSES 57

by Karl Heinz Hoffmann, Bjarne Andresen, and Peter Salamon

NEW TYPES OF COMPLEXITY IN CHEMICAL KINETICS: INTERSECTIONS, COINCIDENCES, AND SPECIAL SYMMETRICAL RELATIONSHIPS 69

by G. S. Yablonsky, D. Constales, and G. B. Marin

OPPORTUNITIES IN THE AREA OF NOISE IN BIOLOGICAL REACTION NETWORKS 75

by Aaron R. Dinner

THERMODYNAMIC APPROACH TO CHEMICAL NETWORKS 85

by G. Nicolis and C. Nicolis

ON THE EMERGENCE OF SIMPLE STRUCTURES IN COMPLEX PHENOMENA: CONCEPTS AND SOME NUMERICAL EXAMPLES 97

by Martin Quack

THE EMERGENCE OF SIMPLICITY FROM COMPLEXITY 119

by John D. Weeks and John C. Tully

PART II DYNAMICS AT EXTREMES

ON THE WAY TO A THEORY OF SOLID STATE SYNTHESIS: ISSUES AND OPEN QUESTIONS 125

by J. Christian Schön

BEYOND MOLECULAR CONDUCTION: OPTICAL AND THERMAL EFFECTS IN MOLECULAR JUNCTIONS 135

by Abraham Nitzan

THERMAL CONDUCTANCE AT THE INTERFACE BETWEEN MOLECULES 159

by David M. Leitner

LASER ENERGY DEPOSITION IN NANODROPLETS AND NUCLEAR FUSION DRIVEN BY COULOMB EXPLOSION 165

by Andreas Heidenreich

UNDERSTANDING ULTRAINTENSE X-RAY INTERACTIONS WITH MATTER 183

by Linda Young

TIME-DEPENDENT COMPUTATIONAL METHODS FOR MATTER UNDER EXTREME CONDITIONS 195

by Barry I. Schneider, Klaus R. Bartschat, Xiaoxu Guan, David Feder, and Lee A. Collins

ELEMENTARY EXCITATIONS IN ULTRACOLD FINITE SYSTEMS 215

by John Weiner

PART III GRAND QUESTIONS

ON BIOMOLECULAR HOMOCHIRALITY AS A QUASI-FOSSIL OF THE EVOLUTION OF LIFE 249

by Martin Quack

ORIGINS OF LIFE 293

by Sydney Leach

AUTHOR INDEX 315

SUBJECT INDEX 343

FEATURES OF COMPLEXITY

RONNIE KOSLOFF

CONTENTS

I. Introduction
II. The Emergence of Classical Dynamics from the Underlying Quantum Laws
  A. Insight from Quantum Control Theory
III. The Emergence of Thermodynamical Phenomena
  A. The Quantum Otto Cycle
  B. Quantum Dynamics of the Working Medium
  C. Quantum Thermodynamics
  D. The Quantum Tricycle
  E. The Third Law of Thermodynamics
IV. Perspective
Acknowledgments
References
Discussion

EXPLORING QUANTUM-CLASSICAL BOUNDARY

KENJI OHMORI

CONTENTS

I. Motivation
II. Development of Experimental Tools
III. Toward the Quantum-Classical Boundary
Acknowledgements
References
Discussion

FREE ENERGIES OF STAGING A SCENARIO AND PERPETUAL MOTION MACHINES OF THE THIRD KIND

PETER SALAMON , BJARNE ANDRESEN , KARL HEINZ HOFFMANN ,
JAMES D. NULTON , ANCA M. SEGALL , and FOREST L. ROHWER

CONTENTS

I. Introduction
II. Perpetual Motion Machines of the Third Kind
III. The Free Energy Cost of Staging A Scenario
  A. A Trivial Scenario: Protein Folding
  B. Staging Free Energy
IV. Near PM3 Processes
V. Energy Sources for Staging
VI. Conclusions
Acknowledgments
References

FINITE-TIME THERMODYNAMICS TOOLS TO ANALYZE DISSIPATIVE PROCESSES

KARL HEINZ HOFFMANN , BJARNE ANDRESEN , and
PETER SALAMON

CONTENTS

I. Introduction
II. Tricycles
III. Thermodynamic Length
IV. Work Deficiency
V. Accounting for Staging Free Energy with Network Thermodynamics
VI. Conclusion
References

NEW TYPES OF COMPLEXITY IN CHEMICAL KINETICS: INTERSECTIONS, COINCIDENCES, AND SPECIAL SYMMETRICAL RELATIONSHIPS

G. S. YABLONSKY , D. CONSTALES , and G. B. MARIN

CONTENTS

I. Introduction
II. Intersections and Coincidences
III. Dual Experiments and Joint Kinetics
IV. Conclusions
References

OPPORTUNITIES IN THE AREA OF NOISE IN BIOLOGICAL REACTION NETWORKS

AARON R. DINNER

CONTENTS

I. Inferring Regulatory Relationships from Noise
II. Noise that is Integral to Biological Function
III. Energy Use
Acknowledgments
References
Discussion

THERMODYNAMIC APPROACH TO CHEMICAL NETWORKS

G. NICOLIS and C. NICOLIS

CONTENTS

I. Introduction
II. The Classical Setting
III. Thermodynamic Signatures and Their Limitations
IV. Mesoscopic-Level Description
V. Stochastic Thermodynamics
VI. Dynamical Systems as Networks
VII. Information Processing
VIII. Conclusions
Acknowledgments
References

ON THE EMERGENCE OF SIMPLE STRUCTURES IN COMPLEX PHENOMENA: CONCEPTS AND SOME NUMERICAL EXAMPLES

MARTIN QUACK

CONTENTS

I. Introduction: Structures in "Spectra of Numbers" Motto: Simplex Sigillum Veri [1]
II. Statistical Properties of Numbers and Spectra
III. Structures in Time-Dependent Dynamics
IV. Conclusions and Outlook
Acknowledgment
References
Discussion

ON THE WAY TO A THEORY OF SOLID STATE SYNTHESIS: ISSUES AND OPEN QUESTIONS

J. CHRISTIAN SCHÖN

CONTENTS

I. Motivation and General Research Program for a Theory of Solid State Synthesis
II. Open Questions and Challenges
III. Conclusion
References

BEYOND MOLECULAR CONDUCTION: OPTICAL AND THERMAL EFFECTS IN MOLECULAR JUNCTIONS

ABRAHAM NITZAN

CONTENTS

I. Introduction
II. Heating and Heat Conduction
  A. Introduction
  B. Heat Generation
  C. Heat Conduction
  D. Junction Temperature
III. Junction Optoelectronics
  A. Introduction
  B. Switching
  C. Effect of Electromagnetic Fields on Junction Transport
  D. Light Emission from Current-Carrying Junctions
  E. Raman Scattering
IV. Concluding Remarks
Acknowledgments
References
Discussion

LASER ENERGY DEPOSITION IN NANODROPLETS AND NUCLEAR FUSION DRIVEN BY COULOMB EXPLOSION

ANDREAS HEIDENREICH

CONTENTS

I. Introduction
II. Simulation of Fusion Reaction Yields and Efficiencies
III. Analysis of Nanodroplet Energetics and Fusion Efficiencies
IV. Conclusions
Acknowledgments
References

UNDERSTANDING ULTRAINTENSE X-RAY INTERACTIONS WITH MATTER

LINDA YOUNG

CONTENTS

I. X-Ray Free-Electron Lasers: Present Status
  A. Comparison of Ultraintense Optical and X-ray Lasers
II. Atomic and Molecular Response to Ultraintense X-Ray Pulses
  A. First Experiments at LCLS
  B. Ultraintense X-Ray Interactions with Clusters
III. Femtosecond Nanocrystallography
IV. Outstanding Challenges
References
Discussion

TIME-DEPENDENT COMPUTATIONAL METHODS FOR MATTER UNDER EXTREME CONDITIONS

BARRY I. SCHNEIDER , KLAUS R. BARTSCHAT , XIAOXU GUAN , DAVID FEDER , and LEE A. COLLINS

CONTENTS

I. Introduction
II. Methodology
III. Some Like it Hot and Some Like it Cold
  A. Excitations of Ultracold Atomic Gases
IV. Diatomic Molecules Exposed to Ultrashort, Intense, Laser Radiation
  A. Results for H_2
    1. One-photon Double Ionization of H_2
    2. Two-photon Double Ionization of H_2
V. Conclusion
VI. A Few Personal and Historical Remarks by Barry Schneider
Acknowledgments
References

ELEMENTARY EXCITATIONS IN ULTRACOLD FINITE SYSTEMS

JOHN WEINER

CONTENTS

I. Introduction
II. Bose–Einstein Condensate Physics Primer
  A. Introduction
  B. Bose Statistics and an Noninteracting Gas
  C. Weakly Interacting BEC: The Gross–Pitaevskii Equation
III. Turbulence in Bose–Einstein Condensates
  A. Review of Classical Turbulence
  B. Quantum Turbulence
IV. Condensate Dynamics in Reduced Dimensions: The Tonks-Girardeau Gas in 1D
V. BCS–BEC Crossover and the Feshbach Resonance
VI. Many-Body Physics in Optical Lattices
  A. The Quantum Phase Transition
  B. Bose–Hubbard Model
VII. Synthetic Gauge Fields with Quantum Gases
  A. The Berry Phase
  B. Experimental Realization of a Synthetic Magnetic Field and a Lorentz-like Force Acting on a BEC
  C. Discussion
VIII. The Simulation of Graphene Physics by Quantum Cold Matter in Optical Lattices
  A. Introduction
  B. Elements of Graphene Condensed Matter Physics
    1. The Spinor Eigensolutions and Charge Conjugation Symmetry in Graphene
    2. The Klein Paradox
  C. Cold-matter Simulation of Graphene Physics
IX. Summary
Acknowledgments
References
Discussion

ON BIOMOLECULAR HOMOCHIRALITY AS A QUASI-FOSSIL OF THE EVOLUTION OF LIFE

MARTIN QUACK

CONTENTS

I. Introduction
II. Some Facts of Life
III. Symmetries and Asymmetries in the Present World
  A. Fundamental Symmetries of Physics and the Question of Left and Right
  B. Symmetry Breakings: Spontaneous, *De Facto*, *De Lege*
IV. Current Status of Theory and Experiment for Parity Violation in Chiral Molecules
V. The Origin and Significance of Biomolecular Homochirality
VI. Dead or Alive, Dark Matter, Cosmology and the World Game: Concluding Remarks and Speculations
  A. Homochirality of Matter and Cosmology
  B. The World Game
  C. Life and Death in the Universe and the Question of Consciousness and Free Will
  D. SETI and Extraterrestrial Homochirality
  E. Search for Terrestrial Intelligence (STI)
Acknowledgment
Appendix
  On Nomenclature
References
Discussion

ORIGINS OF LIFE

SYDNEY LEACH

CONTENTS

I. Preliminary Philosophical Remarks
II. Energy and Material Sources
III. Biochemistry: Metabolism and Replication and a Word on Evolution
IV. The Machinery of Metabolism
V. The Machinery of Replication
VI. Enclosing Nature's Chemical Factory: Protocells
VII. Life Elsewhere
VIII. Some Thoughts on Missing Links, and Recommendations
References
Discussion
