

Contents

1	Introduction	1
1.1	Occurrence of Plasmas in Nature	1
1.2	Definition of Plasma	2
1.3	Concept of Temperature	4
1.4	Debye Shielding	7
1.5	The Plasma Parameter	11
1.6	Criteria for Plasmas	11
1.7	Applications of Plasma Physics	12
1.7.1	Gas Discharges (Gaseous Electronics)	13
1.7.2	Controlled Thermonuclear Fusion	13
1.7.3	Space Physics	14
1.7.4	Modern Astrophysics	14
1.7.5	MHD Energy Conversion and Ion Propulsion	15
1.7.6	Solid State Plasmas	16
1.7.7	Gas Lasers	16
1.7.8	Particle Accelerators	17
1.7.9	Industrial Plasmas	17
1.7.10	Atmospheric Plasmas	17
2	Single-Particle Motions	19
2.1	Introduction	19
2.2	Uniform E and B Fields	19
2.2.1	E = 0	19
2.2.2	Finite E	21
2.2.3	Gravitational Field	24
2.3	Nonuniform B Field	26
2.3.1	$\nabla \mathbf{B} \perp \mathbf{B}$: Grad-B Drift	26
2.3.2	Curved B: Curvature Drift	28
2.3.3	$\nabla B \parallel \mathbf{B}$: Magnetic Mirrors	29

2.4	Nonuniform E Field	35
2.5	Time-Varying E Field	37
2.6	Time-Varying B Field	39
2.7	Summary of Guiding Center Drifts	41
2.8	Adiabatic Invariants	42
2.8.1	The First Adiabatic Invariant, μ	42
2.8.2	The Second Adiabatic Invariant, J	44
2.8.3	The Third Adiabatic Invariant, Φ	47
3	Plasmas as Fluids	51
3.1	Introduction	51
3.2	Relation of Plasma Physics to Ordinary Electromagnetics	52
3.2.1	Maxwell's Equations	52
3.2.2	Classical Treatment of Magnetic Materials	53
3.2.3	Classical Treatment of Dielectrics	54
3.2.4	The Dielectric Constant of a Plasma	55
3.3	The Fluid Equation of Motion	56
3.3.1	The Convective Derivative	56
3.3.2	The Stress Tensor	59
3.3.3	Collisions	62
3.3.4	Comparison with Ordinary Hydrodynamics	63
3.3.5	Equation of Continuity	64
3.3.6	Equation of State	64
3.3.7	The Complete Set of Fluid Equations	65
3.4	Fluid Drifts Perpendicular to B	65
3.5	Fluid Drifts Parallel to B	71
3.6	The Plasma Approximation	73
4	Waves in Plasmas	75
4.1	Representation of Waves	75
4.2	Group Velocity	77
4.3	Plasma Oscillations	78
4.4	Electron Plasma Waves	83
4.5	Sound Waves	89
4.6	Ion Waves	90
4.7	Validity of the Plasma Approximation	92
4.8	Comparison of Ion and Electron Waves	93
4.9	Electrostatic Electron Oscillations Perpendicular to B	96
4.10	Electrostatic Ion Waves Perpendicular to B	102
4.11	The Lower Hybrid Frequency	104
4.12	Electromagnetic Waves with $B_0 = 0$	106
4.13	Experimental Applications	109
4.14	Electromagnetic Waves Perpendicular to B_0	113
4.14.1	Ordinary Wave, $E_1 \parallel B_0$	113
4.14.2	Extraordinary Wave, $E_1 \perp B_0$	115

4.15	Cutoffs and Resonances	117
4.16	Electromagnetic Waves Parallel to B_0	120
4.17	Experimental Consequences	122
4.17.1	The Whistler Mode	122
4.17.2	Faraday Rotation	124
4.18	Hydromagnetic Waves	126
4.19	Magnetosonic Waves	131
4.20	Summary of Elementary Plasma Waves	134
4.21	The CMA Diagram	135
5	Diffusion and Resistivity	145
5.1	Diffusion and Mobility in Weakly Ionized Gases	145
5.1.1	Collision Parameters	145
5.1.2	Diffusion Parameters	147
5.2	Decay of a Plasma by Diffusion	148
5.2.1	Ambipolar Diffusion	148
5.2.2	Diffusion in a Slab	150
5.2.3	Diffusion in a Cylinder	153
5.3	Steady State Solutions	154
5.3.1	Constant Ionization Function	154
5.3.2	Plane Source	155
5.3.3	Line Source	155
5.4	Recombination	156
5.5	Diffusion Across a Magnetic Field	157
5.5.1	Ambipolar Diffusion Across B	161
5.5.2	Experimental Checks	162
5.6	Collisions in Fully Ionized Plasmas	164
5.6.1	Plasma Resistivity	166
5.6.2	Mechanics of Coulomb Collisions	167
5.6.3	Physical Meaning of η	169
5.6.4	Numerical Values of η	171
5.6.5	Pulsed Currents	171
5.7	The Single-Fluid MHD Equations	172
5.8	Diffusion of Fully Ionized Plasmas	174
5.9	Solutions of the Diffusion Equation	176
5.9.1	Time Dependence	176
5.9.2	Time-Independent Solutions	177
5.10	Bohm Diffusion and Neoclassical Diffusion	178
6	Equilibrium and Stability	187
6.1	Introduction	187
6.2	Hydromagnetic Equilibrium	188
6.3	The Concept of β	190

6.4	Diffusion of Magnetic Field into a Plasma	192
6.5	Classification of Instabilities	196
6.5.1	Streaming instabilities	197
6.5.2	Rayleigh–Taylor instabilities	197
6.5.3	Universal instabilities	197
6.5.4	Kinetic instabilities	198
6.6	Two-Stream Instability	198
6.7	The “Gravitational” Instability	202
6.8	Resistive Drift Waves	206
6.9	The Weibel Instability	210
7	Kinetic Theory	211
7.1	The Meaning of $f(\mathbf{v})$	211
7.2	Equations of Kinetic Theory	217
7.3	Derivation of the Fluid Equations	222
7.4	Plasma Oscillations and Landau Damping	224
7.5	The Meaning of Landau Damping	230
7.5.1	The Kinetic Energy of a Beam of Electrons	233
7.5.2	The Effect of Initial Conditions	237
7.6	A Physical Derivation of Landau Damping	238
7.6.1	The Resonant Particles	242
7.6.2	Two Paradoxes Resolved	243
7.7	BGK and Van Kampen Modes	244
7.8	Experimental Verification	245
7.9	Ion Landau Damping	249
7.9.1	The Plasma Dispersion Function	250
7.9.2	Ion Waves and Their Damping	252
7.10	Kinetic Effects in a Magnetic Field	256
7.10.1	The Hot Plasma Dielectric Tensor	257
7.10.2	Cyclotron Damping	259
7.10.3	Bernstein Waves	260
8	Nonlinear Effects	267
8.1	Introduction	267
8.2	Sheaths	269
8.2.1	The Necessity for Sheaths	269
8.2.2	The Planar Sheath Equation	270
8.2.3	The Bohm Sheath Criterion	272
8.2.4	The Child–Langmuir Law	273
8.2.5	Electrostatic Probes	274
8.3	Ion Acoustic Shock Waves	276
8.3.1	The Sagdeev Potential	277
8.3.2	The Critical Mach Numbers	279

8.3.3	Wave Steepening	281
8.3.4	Experimental Observations	282
8.3.5	Double Layers	282
8.4	The Ponderomotive Force	284
8.5	Parametric Instabilities	287
8.5.1	Coupled Oscillators	287
8.5.2	Frequency Matching	288
8.5.3	Instability Threshold	291
8.5.4	Physical Mechanism	293
8.5.5	The Oscillating Two-Stream Instability	295
8.5.6	The Parametric Decay Instability	298
8.6	Plasma Echoes	301
8.7	Nonlinear Landau Damping	304
8.8	Equations of Nonlinear Plasma Physics	307
8.8.1	The Korteweg–de Vries Equation	307
8.8.2	The Nonlinear Schrödinger Equation	312
8.9	Reconnection	322
8.10	Turbulence	324
8.11	Sheath Boundaries	329
9	Special Plasmas	333
9.1	Non-Neutral Plasmas	333
9.1.1	Pure Electron Plasmas	333
9.1.2	Experiments	334
9.2	Solid, Ultra-Cold Plasmas	335
9.3	Pair-ion Plasmas	337
9.4	Dusty Plasmas	339
9.4.1	Dust Acoustic Waves	342
9.4.2	Dust Ion-acoustic Waves	344
9.5	Helicon Plasmas	346
9.6	Plasmas in Space	349
9.7	Atmospheric-Pressure Plasmas	350
9.7.1	Dielectric Barrier Discharges	351
9.7.2	RF Pencil Discharges	352
10	Plasma Applications	355
10.1	Introduction	355
10.2	Fusion Energy	356
10.2.1	Magnetic Fusion	356
10.3	Plasma Accelerators	386
10.3.1	Free-Electron Lasers	392
10.4	Inertial Fusion	393
10.4.1	Glass Lasers	393
10.4.2	KrF Lasers	399

10.5	Semiconductor Etching	399
10.6	Spacecraft Propulsion	405
10.6.1	General Principles	405
10.6.2	Types of Thrusters	407
10.7	Plasmas in Everyday Life	411
Appendix A: Units, Constants and Formulas, Vector Relations		413
Appendix B: Theory of Waves in a Cold Uniform Plasma		417
Appendix C: Sample Three-Hour Final Exam		423
Appendix D: Answers to Some Problems		429
Index		485
