

Contents

1	Thermodynamics and Evolution	1
1.1	Introduction	1
1.1.1	Statics and Dynamics	3
1.2	Local Equilibrium	4
1.3	Introduction to Continuum Mechanics	6
1.3.1	Pressure	7
1.3.2	Shear Stresses	9
1.4	Convection and Diffusion	10
1.4.1	Convective Fluxes	11
1.4.2	Diffusive Fluxes and Constitutive Relations	12
1.5	Viscosity	14
1.6	Thermal Conductivity	16
1.7	Molecular Diffusivity	17
1.8	Molecular Diffusion as an Example of Random Walk	18
1.9	Examples of Diffusive Processes	20
1.10	Problems	21
2	Statics of Fluids	23
2.1	Hydrostatic Equilibrium	23
2.1.1	Incompressible Fluids	24
2.1.2	Ideal Gases	25
2.2	Manometers	25
2.3	Surface Tension	27
2.4	The Young-Laplace Equation	29
2.4.1	Thermodynamic Approach	30
2.4.2	Mechanical Approach	31
2.5	Contact Angle	33
2.6	Problems	35

3	General Features of Fluid Mechanics	39
3.1	Introduction	39
3.2	The Reynolds Number	40
3.3	Boundary Layer and Viscous Resistance	42
3.4	Boundary Conditions	45
3.5	Turbulence	46
3.6	Problems	48
4	Macroscopic Balances	49
4.1	Mass Balance and Continuity Equation	49
4.2	Mechanical Energy Balance and Bernoulli Equation	51
4.2.1	Example: The Pitot Tube	52
4.2.2	Generalization of the Bernoulli Equation	53
4.3	Momentum Balance	56
4.4	Recapitulation of the Bernoulli Equation	57
4.4.1	Effect of the Non-Uniformity of the Velocity Field	58
4.4.2	Effect of the Friction Forces	59
4.4.3	Effect of Pumps and Turbines	59
4.5	Pressure Drops in Pipe Flow	60
4.5.1	Fanning vs. Darcy Friction Factor	61
4.6	Localized Pressure Drops	64
4.6.1	Example: Flow Through a Sudden Enlargement	65
4.7	Flow Around a Submerged Object	66
4.8	Problems	68
5	Laminar Flow Fields	75
5.1	Fully Developed Flow of a Newtonian Fluid in a Pipe	75
5.1.1	Thermodynamic and Modified Pressure	78
5.1.2	Couette Flow	78
5.2	Fluid Rheology	78
5.2.1	Time-Dependent Rheology	80
5.3	Flow of Non-Newtonian Fluids in Circular Pipes	81
5.4	Flow in Porous Media	84
5.4.1	Packed Beds and Fluidized Beds	87
5.4.2	Filters	89
5.5	Quasi Steady Fluid Flows	90
5.6	Capillary Flow	92
5.7	Problems	93
6	The Governing Equations of a Simple Fluid	97
6.1	General Microscopic Balance Equation	97
6.2	Mass Balance: The Continuity Equation	99
6.3	Momentum Balance: Cauchy's Equation	102
6.4	Angular Momentum Balance	105

6.5	The Constitutive Equation for Newtonian Fluids	106
6.6	Energy Balance	108
6.6.1	Temperature Dependence of the Energy Equation	112
6.7	Governing Equations for Incompressible Flow of Newtonian Fluids	113
6.8	The Entropy Equation	116
7	Unidirectional Flows	117
7.1	Flow in Pipes and Channels	117
7.1.1	Falling Cylinder Viscometer	119
7.2	Parallel Plates Viscometer	121
7.3	Radial Flux Between Two Parallel Disks	122
7.4	Fluid Flow Due to the Rapid Movement of a Wall	124
7.5	Lubrication Approximation	128
7.6	Drainage of a Liquid Film from a Vertical Plate	131
7.7	Integral Methods	133
7.8	Problems	136
8	Laminar Boundary Layer	137
8.1	Scaling of the Problem	137
8.2	Blasius Self-similar Solution	141
8.3	Flow Separation	144
8.4	Von Karman–Pohlhausen Method	147
8.5	Problems	153
9	Heat Conduction	155
9.1	Introduction to Heat Transport	155
9.2	Unidirectional Heat Conduction	159
9.2.1	Plane Geometry	159
9.2.2	Cylindrical Geometry	162
9.2.3	Spherical Geometry	163
9.3	The Composite Solid	164
9.3.1	Cylindrical Geometry	166
9.4	Quasi Steady State Approximation	167
9.5	Problems	171
10	Conduction with Heat Sources	175
10.1	Uniform Heat Generation	175
10.1.1	Plane Geometry	175
10.1.2	Cylindrical Geometry	178
10.1.3	Spherical Geometry	181
10.2	Heat Conduction with Chemical Reaction	183
10.2.1	Asymptotic Expansion for Small Da	184
10.2.2	Asymptotic Expansion for Large Da	186
10.3	Problems	188

11 Macroscopic Energy Balance	191
11.1 Introduction	191
11.2 The Heat Transfer Coefficient	193
11.2.1 Forced Convection, Internal Flow	194
11.2.2 Forced Convection, External Flow	195
11.2.3 Laminar Convection Past a Flat Plate	196
11.3 Heat Exchangers	196
11.3.1 Simple Geometries	196
11.3.2 Complex Geometries	199
11.4 Heat Exchanging Fins	201
11.5 Problems	203
12 Time Dependent Heat Conduction	205
12.1 Heat Balance Equation	205
12.2 Heat Conduction in a Semi-infinite Slab	206
12.2.1 Two Solids in Contact	208
12.2.2 Cooling of a Free Falling Film	209
12.3 Temperature Field Generated by a Heat Pulse	210
12.4 Heat Conduction in a Finite Slab	212
12.5 Heat Exchange in a Pipe	215
12.6 Heat Transfer Coefficient in Laminar Flow	218
12.7 Problems	220
13 Convective Heat Transport	221
13.1 Scaling of the Problem	221
13.2 Laminar Thermal Boundary Layer	224
13.2.1 Large Reynolds Number	225
13.2.2 Small Reynolds Number	227
13.3 Colburn-Chilton Analogy	229
13.3.1 Laminar Flow on a Flat Plate	230
13.3.2 Turbulent Flow in a Pipe	231
13.3.3 The Relation between δ and δ_T	231
13.4 Problems	233
14 Constitutive Equations for Transport of Chemical Species	235
14.1 Fluxes and Velocities	235
14.2 Material Balance Equations	238
14.3 The Constitutive Equations of the Material Fluxes	239
14.3.1 The Dilute Case	242
14.3.2 Multi-component Mixtures	243
14.4 Boundary Conditions	243
14.5 Answers to Some Questions on Material Transport	245

15 Stationary Material Transport	251
15.1 Diffusion Through a Stagnant Film	251
15.2 Diffusion with Heterogeneous Chemical Reaction	255
15.2.1 Plane Geometry	255
15.2.2 Spherical Geometry	257
15.3 Diffusion with Homogeneous, First-Order Chemical Reaction	259
15.3.1 Asymptotic Expansion for Small Da	262
15.3.2 Asymptotic Expansion for Large Da	263
15.4 Diffusion with Homogeneous, Second-Order Chemical Reaction	264
15.5 Problems	267
16 Non-stationary Material Transport	269
16.1 Transport Across a Membrane	269
16.2 Evaporation of a Liquid from a Reservoir	272
16.3 Slow Combustion of a Coal Particle	275
16.4 Unsteady Evaporation	278
16.5 Problems	281
17 Convective Material Transport	283
17.1 Mass Transport Through a Fixed Bed	283
17.2 Laminar Material Boundary Layer	288
17.3 Mass Boundary Layer for Small Reynolds Number	291
17.4 Integral Methods	294
17.5 Quasi Steady State (QSS) Approximation	296
17.6 Problems	297
18 Transport Phenomena in Turbulent Flow	299
18.1 Fundamental Characteristics of Turbulence	300
18.2 Time- and Length-Scales in Turbulence	302
18.3 Reynolds-Averaged Equations	304
18.3.1 Mean Quantities	304
18.3.2 Conservation of Mass	305
18.3.3 Conservation of Momentum	306
18.3.4 Conservation of Energy and of Chemical Species	307
18.3.5 Turbulent Fluxes	308
18.4 Turbulent Diffusion	309
18.4.1 Eddy Diffusivities	309
18.4.2 Dimensionless Wall Variables	311
18.4.3 Mixing Length Model	312
18.5 Logarithmic Velocity Profile	313
18.6 More Complex Models	316

19 Free Convection	321
19.1 The Boussinesq Approximation	322
19.2 Free Convection in a Vertical Channel	323
19.3 Scaling of the Problem	326
19.4 The Boundary Layer in Free Convection	328
19.5 Experimental Correlations	330
19.6 Heat Transfer with Phase Transition	331
19.6.1 Film Condensation on a Vertical Plate	331
19.6.2 Boiling	334
19.7 Problems	338
20 Radiant Heat Transfer	339
20.1 The Law of Stefan-Boltzmann	339
20.1.1 Planck's Black Body Radiation Theory	342
20.2 Emissivity and Absorptance	343
20.2.1 The Kirchhoff Law	343
20.2.2 The View Factor	345
20.2.3 Example: Radiation in a Furnace Chamber	346
20.2.4 Exchange of Radiant Heat Between Gray Bodies	348
20.3 Radiation and Conduction	349
20.4 Example: The Design of a Solar Panel	350
20.5 Problems	351
21 Antidiffusion	353
21.1 The Chemical Potential	353
21.1.1 The Gibbs-Duhem Relation	354
21.1.2 Binary Mixtures	355
21.2 Chemical Stability	356
21.3 The Critical Point	360
21.4 Example: Binary Symmetric Mixtures	362
21.5 Molecular Diffusion in Binary Symmetric Mixtures	365
21.6 Non-ideal Mixtures	367
21.7 Osmotic Flow	368
22 Stationary Diffusion	371
22.1 Harmonic Functions	371
22.1.1 Decaying Harmonics	373
22.2 Creeping Flow	375
22.2.1 Stokeslet	376
22.2.2 Uniform Flow Past a Sphere	378
22.2.3 Faxen's Law	379

Appendix A: Properties of Pure Components at 1 atm	381
Appendix B: Viscosity and Surface Tension of Selected Fluids	383
Appendix C: Conversion Factors	385
Appendix D: Governing Equations	387
Appendix E: Balance Equations (Eulerian Approach)	391
Appendix F: Introduction to Linear Algebra	397
Solutions of the Problems	407
Background Reading	455
Index	457
