Forev Prefa Futur	vord ce e Contributions	
1. E	nergy Analysis of Charged Particle Flows	
1	. Basic Parameters	
2	Main Types of Energy Analyzers	
3	. Advanced Energy Analyzers	
2. A	nalytical Design Methods	1
1	. Focusing Properties of Electrostatic Mirrors with Ideal Cylindrical Fields	
2	. Focusing Properties of Electrostatic Mirrors with Ideal Hyperbolic Fields	
3. A	pproximate-Analytical Method of Calculating the Charged	
P	article Trajectories in Electrostatic Fields	8
1	. Integro-Differential Equation of Charged Particle Trajectories	
	in the Electrostatic Hexapole-Cylindrical Field $U(r,z) = \ln r + \gamma U_h(r,z)$	9
2	Calculation of Charged Particle Trajectories in the Electrostatic	
2	Hexapole-Cylindrical Field $U(r_z) = \ln r + \gamma U_h(r_z)$	
3	Applyzer with End Eaco Electrodes (III = 1)	ſ
л	Analyzer with End-Face electiones ($y = -1$) Electron Optical Properties of the Havapole Optical Energy	
4	Analyzer with $x = 1$	1(
5	Analysis of Electron-Ontical Characteristics of the Energy Analyzer	
5	with the Field Distribution $U(r,z) = \frac{5}{3} \ln r - U_h(r,z)$	1
4. N	lumerical Methods in the Design of Energy Analyzers	11
1	Methods for Numerical Simulation of Electrostatic Fields	1
2	Main Approaches to Solving the Problems of Potential Theory	
-	Using BEM	I
3	with Singularities	1 -
	With Singularities	1-
4	Exterior Dirichlet Problem and Calculating the Integrals	1.
2	of Functions with Singularities	1
6	Numerical Calculation of Potential Gradient	1:
0	. Humeneur calculation of rotential Gradient
