

CONTENTS

<i>Foreword</i>	<i>xi</i>
<i>Preface</i>	<i>xiii</i>
<i>Future Contributions</i>	<i>xv</i>
<i>Acknowledgments</i>	<i>xix</i>
<i>Plan of the Book</i>	<i>xxi</i>
1. Complements of Geometrical Light Optics	1
1. Geometry of the Rays	2
2. Geometry of the Surfaces	14
3. Comments and Notes	24
2. Complements of Wave Optics	27
1. Mathematical Preliminaries	28
2. Elements of Diffraction Theory: Propagation	38
3. Elements of Diffraction Theory: Interaction	45
4. Kirchhoff Diffraction from a Half-plane and Comparison with the Sommerfeld Solution	53
5. Comments and Notes	55
3. Particle Theory of Image Formation	59
1. Elementary Considerations	60
2. Expressions for the Electric and Magnetic Fields	63
3. Electron Focusing in Cylindrical Coordinates	65
4. Image Formation: The General Case	69
5. Motion in Perpendicular and Crossed Fields	76
4. Electromagnetic Lenses	79
1. Electrostatic Lenses	79
2. Magnetic Lenses	90
3. Quadrupole Lenses	105
4. Comments and Notes	108
5. Electron, Particles, or Waves?	109
1. The Electron Biprism	110
2. Experimental Results with the Electron Biprism	115
3. Buildup of the Biprism Fresnel Interference Fringes by Single Electrons	117
4. Experiments with Nanoslits	120

viii	Contents
5. Buildup of the Two-Slit Fraunhofer Interference Fringes by Single Electrons	128
6. Comments and Notes	131
6. The Wavefunction of the Paraxial Electrons	133
1. The Schrödinger Equation	134
2. The Eikonal Approximation	135
3. Electron–Specimen Interaction: The Phase Object Approximation	145
4. The Multislice Approximation	147
5. Comparison Between the Two Approaches	160
6. Comments and Notes	161
7. Fourier Optics	163
1. Relationship Between the Wavefunctions in the Object and Image Planes	165
2. A Note on the Dirac δ Function	168
3. Effect of an Aperture on the Image	170
4. Influence of the Aperture on the Image of a Periodic Object	175
5. Evolution of the Wavefunction in a Thin Lens	180
6. From Wave to Particle Mechanics	183
7. Comments and Notes	186
8. Other Interference Experiments	187
1. Multiple Beam Experiments	188
2. Interference of Probability Amplitudes	192
3. The Magnetic Aharonov–Bohm Effect	198
4. The Electrostatic Aharonov–Bohm Effect	203
5. Comments and Notes	208
9. Interpretation of the Experimental Results	209
1. The Wavefunction in the Observation Plane	210
2. Spherical Wave Theorems	211
3. Slits	213
4. Electron Biprism	226
5. Interference of the Probability Amplitudes	235
6. Interpretation of the Aharonov–Bohm Effects	236
7. Linear Charge Distributions	240
8. Comments and Notes	244
10. Off-Axis Electron Holography: A Short Introduction	245
1. Gabor’s Idea	246
2. Electron Holography: Early State of the Art	248

Contents	ix
3. Electron Holography of Long-Range Electromagnetic Fields	254
4. Simulation of the Holographic Process for a Magnetized Bar	263
5. Comments and Notes	268
11. Waveoptical Analysis of the Spherical Aberration	271
1. Beyond the Paraxial Approximation	273
2. Phase Object Approximation with Spherical Input Waves	276
3. Equation for the Spherical Aberration Coefficient	278
4. The Wide-Angle Parabolic Wave Equation	280
5. Solution of the Wide-Angle Parabolic Equation	283
6. Comparison with the Classical Results	286
7. The Scherzer Theorem for Magnetic Lenses	292
8. Amplitude Transfer Theory	294
9. The Point Transfer Function	296
10. Phase Contrast in the STEM	299
11. Comments and Notes	302
12. Epilogue	303
<i>Appendix</i>	305
<i>Bibliography</i>	311
<i>Contents of Volumes 151–193</i>	321
<i>Index</i>	329
