1	Introduction	1
1.1	Challenges in Plasma Physics for Tokamaks	2
1.2	Control Challenges for Distributed Parameter Systems	4
1.3	Problem Statement and Background	6
1.4	Main Contributions	7
1.5	Outline	8
	References	9
2	Mathematical Model of the Safety Factor and Control	
	Problem Formulation	11
2.1	Inhomogeneous Transport of the Poloidal Magnetic Flux	11
2.2	Periferal Components Influencing the Poloidal Magnetic Flux	13
2.2.1	Resistivity and Temperature Influence	13
2.2.2	Inductive Current Sources	14
2.2.3	Non-inductive Current: Sources and Nonlinearity	15
2.3	Control Problem Formulation	16
2.3.1	Equilibrium and Regulated Variation	16
2.3.2	Interest of Choosing ψ as the Regulated Variable	19
2.3.3	Control Challenges	20
	References	21
3	A Polytopic LPV Approach for Finite-Dimensional Control	23
3.1	LPV Model	24
3.2	Controller Synthesis	25
3.3	Results for a Tore Supra Plasma Shot	28
3.3.1	Implementation	28
3.3.2	Simulation Results	29
3.4	Summary and Conclusions on the Polytopic Approach	31
	References	32

4	Infinite-Dimensional Control-Lyapunov Function	33
4.1	Lyapunov Functions for Distributed Parameter Systems	33
4.2	Some Possible Lyapunov Functions	35
4.2.1	First Candidate Lyapunov Function	36
4.2.2	Second Candidate Lyapunov Function	37
4.3	Selected Candidate Lyapunov Function and Nominal Stability	38
4.3.1	Selected Lyapunov Function	39
4.4	Input-to-State Stability and Robustness	42
4.4.1	Disturbed Model	42
4.5	D ¹ -Input-to-State Stability	46
4.5.1	Strict Lyapunov Function and Sufficient Conditions for D ¹ -Input-to-State Stability	47
4.6	Control of the Poloidal Magnetic Flux Profile in a Tokamak Plasma	49
4.6.1	Stability and Numerical Computation of the Lyapunov Function	49
4.6.2	ISS Property and Robust Unconstrained Control of the Magnetic Flux Gradient	50
4.6.3	Using the Lyapunov Approach to Include Actuation Constraints	54
	References	59
5	Controller Implementation	61
5.1	Total Plasma Current Dynamic Model	62
5.1.1	Perfect Decoupling and Cascade Interconnection of ISS Systems	63
5.1.2	Interconnection Without Perfect Decoupling	64
5.2	Modified Lyapunov Function	65
5.3	Simulation Result: Closed-Loop Tracking Using METIS	68
5.3.1	General Description	68
5.3.2	Simulation Scenario: METIS, Independent I_p Control, Large Variations of P_{lh} , ICRH Heating Disturbance	70
5.3.3	Simulation Scenario: METIS, Independent I_p Control, Large Variations of $N_{ }$, ICRH Heating Disturbance	72
5.4	Some Preliminary Extensions	74
5.4.1	Profile Reconstruction Delays	74
5.4.2	Extension for TCV	74
5.5	Summary and Conclusions	83
