

CONTENTS

<i>Contributors</i>	<i>vii</i>
1. Internal Length Gradient (ILG) Material Mechanics Across Scales and Disciplines	1
E.C. Aifantis	
1. Introduction	2
2. Methodology and Proposed ILG Platform	13
3. Emerging Research Case-Study Areas	25
4. Benchmark Problems	38
5. Concluding Remarks	93
Acknowledgments	97
References	97
2. Scaling to RVE in Random Media	111
M. Ostoja-Starzewski, S. Kale, P. Karimi, A. Malyarenko, B. Raghavan, S.I. Ranganathan, and J. Zhang	
1. Micro-, Meso-, and Macroscales	113
2. Spatial Randomness	119
3. Antiplane Elasticity = In-Plane Conductivity	126
4. Elastic Microstructures	134
5. Inelastic Microstructures	145
6. Viscoelastic Microstructures	161
7. Stokes Flow in Porous Media	165
8. Thermoelastic Microstructures	168
9. Homogenization by a Micropolar Continuum	177
10. Waves and Wavefronts in Random Media	183
11. Electromagnetic Properties	189
12. RVE in Presence of Violations of Thermodynamics' Second Law	192
13. Conclusions	199
Acknowledgments	203
References	203
