<b>1</b>	<b>The Theoretical Basis of the Low-Temperature Plasma</b>	<b>1</b>
1.1	The Basic Approaches to the Description of Plasma	1
1.1.1	The Plasma Relations for the Full Thermodynamic Equilibrium	4
1.1.2	The Model of Local Thermodynamic Equilibrium in Plasma	7
1.1.3	The Model of Partial Local Thermodynamic Equilibrium in Plasma	8
1.2	Model of Equilibrium Plasma	11
1.2.1	The Energy Balance Equation	12
1.2.2	The Momentum Equations of the Plasma Flow	13
1.2.3	The Continuity Equation of the Plasma Flow	14
1.2.4	The Maxwell's Equations	14
1.2.5	The Equations of Equilibrium Plasma Model in a Cylindrical Coordinate System	15
1.3	The Two-Temperature Model of Nonequilibrium Plasma	18
1.3.1	The Violation of Ionization Equilibrium in Plasma. Equation of Ionization Equilibrium	23
1.4	The Two-Speed Plasma Model	25
1.5	Gas Dynamic Models of Plasma Turbulence	26
1.5.1	The Reynolds-Averaged Navier–Stokes Equations	27
1.5.2	The Main Gas Dynamic Model of Turbulence	31
1.6	Models of Light Emission and Absorption in Plasma	36
1.6.1	Radiation in the Continuous Spectrum	37
1.6.2	Absorption in the Continuum	42
1.6.3	Radiation in the Spectral Lines	45
1.6.4	The Absorption in Spectral Lines	49
