<b>Woodhead Publishing Series in Energy</b>	<b>xiii</b>
<b>Introduction</b>	<b>xix</b>
<b>1 Introduction to Generation IV nuclear reactors</b>	<b>1</b>
<i>D. Buckthorpe</i>	
1.1 Introduction: the need for new nuclear systems	1
1.2 Generation IV requirements and technical challenges	2
1.3 Generation IV systems fulfilling these requirements	5
1.4 Conclusion	20
References	21
<b>2 Corrosion phenomena induced by liquid metals in Generation IV reactors</b>	<b>23</b>
<i>C. Fazio, F. Balbaud</i>	
2.1 Introduction to the liquid metals selected for Generation IV reactors	23
2.2 Thermal, physical, and chemical properties of the liquid metals	29
2.3 The impact of structural material corrosion on reactor operation	36
2.4 Parameters affecting corrosion in the liquid metal and experimental procedures	38
2.5 Corrosion under reactor conditions: mass transfer, experimental data, and modeling	49
2.6 Impact of corrosion on mechanical strength of the structural material	56
2.7 Corrosion mitigation	66
2.8 Conclusions	68
References	70
<b>3 Corrosion phenomena induced by gases in Generation IV nuclear reactors</b>	<b>75</b>
<i>C. Cabet, F. Rouillard</i>	
3.1 Corrosion of IHX alloys in impure helium of a VHTR system	81
3.2 Corrosion phenomena in supercritical CO <sub>2</sub>	92
3.3 Concluding remarks	101
References	103

<b>4 Corrosion phenomena induced by supercritical water in Generation IV nuclear reactors</b>	<b>105</b>
<i>D. Guzonas, R. Novotny, S. Penttilä</i>	
4.1 Introduction	105
4.2 What is supercritical water?	110
4.3 Test methodologies	115
4.4 General corrosion in SCW	115
4.5 Environmentally assisted cracking	128
4.6 Summary	142
References	142
<b>5 Corrosion phenomena induced by molten salts in Generation IV nuclear reactors</b>	<b>153</b>
<i>V. Ignatiev, A. Surenkov</i>	
5.1 Introduction: molten salts in Generation IV nuclear reactors	153
5.2 Requirements and molten salt mixtures available	154
5.3 Corrosion processes in molten salts	158
5.4 Salt chemistry control	161
5.5 Materials and corrosion data for different reactor systems and components	166
5.6 Conclusion	185
References	186
<b>6 Mechanical behavior of structural materials for Generation IV reactors</b>	<b>191</b>
<i>M. Sauzay</i>	
6.1 Introduction	191
6.2 Mechanical properties of F-M steels	194
6.3 Analysis of the macroscopic behavior of martensitic steels for low loads	198
6.4 Microstructural changes during the strain of martensitic steels at low loads	205
6.5 Elements of a martensitic steel softening model	209
6.6 Damage and fracture in fatigue and creep	216
6.7 Recent progresses concerning long-term creep and fatigue behavior of austenitic stainless steels	227
6.8 Conclusions and recommended further work	245
Acknowledgments	248
References	248
<b>7 Irradiation effects in Generation IV nuclear reactor materials</b>	<b>253</b>
<i>A. Aitkaliyeva, L. He, H. Wen, B. Miller, X.M. Bai, T. Allen</i>	
7.1 Introduction	253
7.2 Radiation damage process	254
7.3 Advances in characterization of defects in irradiated materials	268

7.4 Mesoscale modeling of radiation damage	271
7.5 Summary	280
Acknowledgments	280
References	280
<b>8 Irradiation-resistant austenitic steels as core materials for Generation IV nuclear reactors</b>	<b>285</b>
<i>J.-L. Séran, M. Le Flem</i>	
8.1 Introduction	285
8.2 Austenitic steels and Generation IV systems	286
8.3 Out-of-pile characteristics of reference austenitic steels	290
8.4 In-pile and postirradiation mechanical properties of reference austenitic steels	295
8.5 Swelling and irradiation creep properties of reference austenitic steels	300
8.6 Development of advanced austenitic materials designed to increase the in-pile duration of core structures of Generation IV systems	316
8.7 Conclusion	324
Glossary	325
References	325
<b>9 Irradiation-resistant ferritic and martensitic steels as core materials for Generation IV nuclear reactors</b>	<b>329</b>
<i>J. Henry, S.A. Maloy</i>	
9.1 Introduction	329
9.2 Use of ferritic-martensitic steels in fast reactors and future Generation IV reactors	331
9.3 Irradiation effects in ferritic-martensitic steels	333
9.4 Advanced ferritic-martensitic steels with improved thermal creep resistance	346
9.5 Summary	349
Abbreviations	350
References	350
<b>10 Oxide dispersion-strengthened/ferrite-martensite steels as core materials for Generation IV nuclear reactors</b>	<b>357</b>
<i>S. Ukai, S. Ohtsuka, T. Kaito, Y. de Carlan, J. Ribis, J. Malaplate</i>	
10.1 Introduction	357
10.2 Nanosized oxide particle control	359
10.3 Development of oxide dispersion-strengthened steels in Japan	361
10.4 Development of oxide dispersion-strengthened steels in France	373
10.5 Development of other oxide dispersion-strengthened steels	383
10.6 Joining	386
10.7 Environmental compatibility	391

10.8	Irradiation	399
10.9	Conclusion	409
	References	409
<b>11</b>	<b>Refractory metals as core materials for Generation IV nuclear reactors</b>	<b>415</b>
	<i>T. Muroga</i>	
11.1	Refractory metals for nuclear application	415
11.2	V and its alloys	415
11.3	Nb, Ta, Mo, W, and their alloys	427
11.4	Summary	435
	References	436
<b>12</b>	<b>SiC<sub>f</sub>/SiC composites as core materials for Generation IV nuclear reactors</b>	<b>441</b>
	<i>J.Y. Park</i>	
12.1	Introduction	441
12.2	Potential use in Generation IV systems	442
12.3	Fabrication and role of each constituent of the SiC <sub>f</sub> /SiC composite and matrix filling technologies	451
12.4	Behavior of the SiC <sub>f</sub> /SiC composite in operating conditions	458
12.5	Codes and standards	464
12.6	Summary	465
	Acknowledgments	466
	References	466
<b>13</b>	<b>Carbon/carbon materials for Generation IV nuclear reactors</b>	<b>471</b>
	<i>P. David</i>	
13.1	Introduction	471
13.2	Potential use in Generation IV systems	471
13.3	Fabrication and role of each constituent of C/C composites and matrix filling technologies	475
13.4	Behavior of C/C in operating conditions	479
13.5	Standards and codes	487
13.6	Conclusions	489
	References	489
<b>14</b>	<b>Graphite as a core material for Generation IV nuclear reactors</b>	<b>495</b>
	<i>B.J. Marsden, A.N. Jones, G.N. Hall, M. Treifi, P.M. Mummery</i>	
14.1	Introduction	495
14.2	Nuclear graphite grades, their manufacture, microstructure, and properties	496
14.3	Nuclear graphite irradiation-induced dimensional and property changes	500
14.4	Component structural integrity	519

14.5	Thermal oxidation in fault conditions	520
14.6	Dealing with irradiated graphite waste	523
14.7	Advances in the treatment of graphite and carbowastes	526
14.8	Molten salt reactors—graphite	527
14.9	Discussion and conclusions	527
	References	528
<b>15</b>	<b>Absorber materials for Generation IV reactors</b>	<b>533</b>
	<i>D. Gosset</i>	
15.1	Introduction: neutron absorbers for Generation IV reactors	533
15.2	Scaling the neutron absorbers	541
15.3	Behavior under irradiation of neutron absorber materials	550
15.4	Conclusion: for a better definition of the needs	562
	Abbreviations	564
	References	564
<b>16</b>	<b>Advanced irradiation-resistant materials for Generation IV nuclear reactors</b>	<b>569</b>
	<i>S.J. Zinkle</i>	
16.1	Introduction	569
16.2	Identification of potential advanced irradiation-resistant materials	569
16.3	Basic properties	576
16.4	Fabrication and joining	581
16.5	Experimental feedback and possible applications	584
16.6	Future trends and conclusions	585
	Acknowledgment	586
	References	586
<b>17</b>	<b>Conventional austenitic steels as out-of-core materials for Generation IV nuclear reactors</b>	<b>595</b>
	<i>F. Dalle, M. Blat-Yrieix, S. Dubiez-Le Goff, C. Cabet, Ph. Dubuisson</i>	
17.1	Introduction	595
17.2	General overview of austenitic steels in Generation IV frame	596
17.3	Choice of austenitic steel grades for future French SFR out-of-core components	603
17.4	Basic physical, thermal, and mechanical properties	605
17.5	Fabrication and joining	607
17.6	Long-term mechanical behavior in operating conditions	612
17.7	Corrosion and oxidation behavior	618
17.8	Low-dose irradiation	622
17.9	Codes and standards	624
17.10	New alloy development	626
17.11	Conclusions	629
	Glossary	630
	References	631

<b>18</b>	<b>Conventional ferritic and martensitic steels as out-of-core materials for Generation IV nuclear reactors</b>	<b>635</b>
	<i>T. Asayama</i>	
18.1	Introduction—attractive characteristics for Generation IV nuclear plants	635
18.2	Pedigree of materials	636
18.3	Application and challenges	636
18.4	Evaluation technologies	637
18.5	Fabrication technologies	644
18.6	Code qualification	644
18.7	Summary	646
	References	647
