Contents

1	Intro	luction	1
	1.1	Scope of this Book	2
2	From	Newton to Euler and Navier-Stokes	5
	2.1	The Continuum Description	5
	2.2	Eulerian and Lagrangian Time Derivatives	8
		2.2.1 Eulerian and Lagrangian Change	10
	2.3	Pressure of an Isotropic Gas	10
		2.3.1 The Stress Tensor due to Thermal Motion	12
		2.3.2 The Case of an Isotropic Fluid or Gas	
		in Equilibrium	14
	2.4	The Euler and the Navier-Stokes Equations	18
	2.5	Pressure, Temperature and the Internal Energy	19
	2.6	Gravity and Self-gravity	20
	2.7	Mass Conservation and the Continuity Equation	21
		2.7.1 Equation of Motion for a Material Curve	21
		2.7.2 Material Volumes	22
		2.7.3 Mass Conservation and the Continuity Equation	25
	2.8	The Adiabatic Gas Law	27
		2.8.1 The Polytropic Gas Law, the Specific Heat	
		Coefficients and the Isothermal Gas	28
	2.9	Application: The Isothermal Sphere and Globular Clusters	31
		2.9.1 The Tidal Radius	38
	2.10	Application 2: Dark Matter Halos	39
3	Conse	ervative Formulation of the Fluid Equations	43
	3.1	Introduction	43
	3.2	Conservative Form of the Fluid Equations	46
		3.2.1 Conservative Mass Equation	47
		3.2.2 Conservative Momentum Equation	47

		3.2.3 3.2.4	Conservative Form of the Energy Equation Energy Non-conservation and Violent Relaxation:	48
			A Single-Particle Analogy	52
	3.3	Entropy	Law for an Ideal Gas in Conservative Form	53
	3.4	Conserv	ative Equations with Viscosity	54
		3.4.1	Viscous Dissipation	55
		3.4.2	Energy Equation with Viscosity	58
	3.5	Jump Co	onditions and Surface Stress	59
		3.5.1	Mass Conservation	60
		3.5.2	Force Exerted by a Fluid on a Solid	
			Surface (Stress)	61
		3.5.3	Conditions on a Surface Separating Two Ideal	
			Fluids	64
4	Specia	I Flows.		69
	4.1	Introduc	tion	69
	4.2	Incompr	essible Flows	70
		4.2.1	Stream Function for Steady Incompressible	
			Flows	71
	4.3	Irrotation	al Flows (Potential Flows)	73
	4.4	Bernoull	i's Law for a Steady, Constant-Density Flow	74
5	Steady	Incompr	ressible Flows	70
	5.1	Introduct	tion	79
	5.2	The Rey	nolds Number	80
	5.2 5.3	The Rey Incompre	nolds Number	80 80
	5.2 5.3 5.4	The Rey Incompre Laminar	nolds Number essible, Irrotational and Steady Corner Flow Viscous Flow Between Two Parallel Plates	80 80 83
	5.2 5.3 5.4	The Rey Incompre Laminar 5.4.1	nolds Number essible, Irrotational and Steady Corner Flow Viscous Flow Between Two Parallel Plates Drag on the Plates	80 80 83 85
	5.2 5.3 5.4	The Rey Incompre Laminar 5.4.1 5.4.2	nolds Number essible, Irrotational and Steady Corner Flow Viscous Flow Between Two Parallel Plates Drag on the Plates Case of a Moving Plate	80 80 83 85 86
	5.2 5.3 5.4 5.5	The Rey Incompre Laminar 5.4.1 5.4.2 Couette I	nolds Number essible, Irrotational and Steady Corner Flow Viscous Flow Between Two Parallel Plates Drag on the Plates Case of a Moving Plate Flow Between Two Rotating Coaxial Cylinders	80 80 83 85 86 87
	5.2 5.3 5.4 5.5 5.6	The Rey Incompre Laminar 5.4.1 5.4.2 Couette J Small-Re	nolds Number essible, Irrotational and Steady Corner Flow Viscous Flow Between Two Parallel Plates Drag on the Plates Case of a Moving Plate Flow Between Two Rotating Coaxial Cylinders	80 80 83 85 86 87 90
	5.2 5.3 5.4 5.5 5.6	The Rey Incompre Laminar 5.4.1 5.4.2 Couette I Small-Re 5.6.1	nolds Number essible, Irrotational and Steady Corner Flow Viscous Flow Between Two Parallel Plates Drag on the Plates Case of a Moving Plate Flow Between Two Rotating Coaxial Cylinders eynolds Number Stokes Flow Past a Sphere Drag Force on the Sphere	80 80 83 85 86 87 90 95
	5.2 5.3 5.4 5.5 5.6	The Rey Incompre Laminar 5.4.1 5.4.2 Couette I Small-Re 5.6.1 5.6.2	nolds Number essible, Irrotational and Steady Corner Flow Viscous Flow Between Two Parallel Plates Drag on the Plates Case of a Moving Plate Flow Between Two Rotating Coaxial Cylinders eynolds Number Stokes Flow Past a Sphere Drag Force on the Sphere The Drag Coefficient	80 80 83 85 86 87 90 95 96
	5.2 5.3 5.4 5.5 5.6 5.7	The Rey Incompre Laminar 5.4.1 5.4.2 Couette J Small-Re 5.6.1 5.6.2 Ideal Pot	nolds Number essible, Irrotational and Steady Corner Flow Viscous Flow Between Two Parallel Plates Drag on the Plates Case of a Moving Plate Flow Between Two Rotating Coaxial Cylinders Evynolds Number Stokes Flow Past a Sphere Drag Force on the Sphere The Drag Coefficient ential Flow Past a Sphere	80 80 83 85 86 87 90 95 95 96 97

Contents

	6.5	The Accretion Solution	116
	6.6	The Pressure-Confined Astrophysical Jet	118
		6.6.1 A Bit of History	119
		6.6.2 Fundamental Equations for a Pressure-Driven Jet	
		Flow	120
7	Small	Amplitude Waves: Basic Theory	125
	7.1	Introduction	125
		7.1.1 Perturbation Analysis of Particle Motion	100
	7.0	In a Potential	120
	7.2	What Constitutes a Small-Amplitude wave?	129
	1.5	Ine Plane wave Representation	129
	7.4	Lagrangian and Eulerian Perturbations	131
		7.4.1 Velocity, Density and Pressure Perturbations	100
	75		132
	1.5	The Diaman state of the Di	143
	/.0	The Plane wave Assumption for Sound waves	140
		7.6.1 Character of the Solutions	14/
		7.6.2 Wave Kinematics: Phase- and Group velocity	149
	1.1	Sound waves in a Moving Fluid	153
	/.8	The $\omega = 0$ Solution as an Entropy Wave	154
	A 11		
8	Small	Amplitude Waves: Applications.	157
8	Small 8.1	Amplitude Waves: Applications. The Jeans Instability.	157 157
